The Code was first

published in 2016 and 2017. It provides a glimpse into the state of the art of Earth Science on the cusp of 2020.

Earth Science studies the different spheres of the Earth (geosphere, atmosphere, hydrosphere and, partly, biosphere) and, as such, it provides a holistic perspective of our planet. This discipline,

in addition to  
understanding our  
environment, enables us  
to face major natural  
challenges, such as  
improving the  
management of natural  
resources, promoting  
environmental  
sustainability and  
forecasting and  
managing natural  
hazards (Acocella, 2015,  
and references therein).

On this basis, the contributions grouped in this eBook, even though appearing distinct in subject, methods, goal and impact, should be considered as different aspects of the same system. Indeed, the selection of these contributions aims to capture a multidisciplinary and common understanding

of our planet, with its interconnected processes and challenges. It is important to note that, in many cases, it has not been easy to select a representative study per specialty, and thus the papers included in this eBook should therefore not be considered as the representative ones, but rather as a concise selection of key papers.
