This book is open access under a CC BY-NC 2.5 license. This book describes the extensive contributions made toward the advancement of human assessment by scientists from one of the world's leading research institutions, Educational Testing Service. The book's four major sections detail research and development in measurement and statistics, education policy analysis and evaluation, scientific psychology, and validity. Many of the developments presented have become de-facto standards in educational and psychological measurement, including in item response theory (IRT), linking and equating, differential item functioning (DIF), and educational surveys like the National Assessment of Educational Progress (NAEP), the Programme of International Student Assessment (PISA), the Progress of International Reading Literacy Study (PIRLS) and the Trends in Mathematics and Science Study (TIMSS). In addition to its comprehensive coverage of contributions to the theory and methodology of educational and psychological measurement and statistics, the book gives significant attention to ETS work in cognitive, personality, developmental, and social psychology, and to education policy analysis and program evaluation. The chapter authors are long-standing experts who provide broad coverage and thoughtful insights that build upon decades of experience in research and best practices for measurement, evaluation, scientific psychology, and education policy analysis. Opening with a chapter on the genesis of ETS and closing with a synthesis of the enormously diverse set of contributions made over its 70-year history, the book is a useful resource for all interested in the improvement of human assessment.

**An estimated 71,000 around the world take the Medical College Admission Test, more commonly known as the MCAT, each year. Most medical colleges require applicants to take this test, and most schools look for a combined score on the verbal reasoning, physical sciences, and biological sections of at least 30. However, the average score, on a scale of 1 to 15, is only 8. How can you boost your scores and get into the medical school of your choice? Reading 101 Ways to Score Higher on Your MCAT and employing the practices within is one way to do so. In this new book, you will learn about and understand the new computerised format, as well as the content of the exam. You will learn how to read questions correctly, how to control anxiety, and how to approach each section. In addition, you will be presented with a list of resources to help you prepare and dozens of tips from insiders. 101 Ways to Score Higher on Your MCAT is filled with practice questions and information found in each of the four sections, including the writing samples. You will find reviews of physics skills; chemistry skills; general math concepts in algebra and trigonometry; finding the main point and relevant information in a reading passage; formulating, communicating, and proving an argument; biology; and organic chemistry. In addition, diagrams of the circulatory, nervous, respiratory, lymphatic, muscular, and skeletal systems are included. The MCAT is designed to assess your problem solving, critical thinking, writing skills, and knowledge of science concepts. Instead of panicking and worrying, pick up this book and be confident in your test-taking abilities. Whether you are taking the test for the first time or sitting for a second and hoping to improve your score, you will learn valuable information and practical tips to do just that.**

This document provides a summary and evaluation of the methodological procedures and results of the full-scale implementation of the Beginning Postsecondary Student Longitudinal Study Second Follow-up, 1990-94 (BPS:90/94). The study was conducted for the National Center for Education Statistics by Research Triangle Institute with the assistance of Abt Associates and Management Planning Research Associates. BPS:90/94 involved locating and computer-assisted telephone interviewing of a sample of individuals identified initially in the 1990 National Postsecondary Student Aid Study. An introductory chapter provides a brief overview of the background, purposes, and scheduled projects of the BPS:90/94 full-scale study. Chapter 2 describes the design and method of the study, including sample design, respondent locating, data collection, and design of the operating control system. Chapter 3 presents the results of the locating and data collection, and Chapter 4 evaluates the quality of the data collected. The final three chapters present issues related to the construction of the study data file, sample weighting, and estimation techniques. Six appendixes describe the survey review panel membership and present student prenotification materials, the interview instruments, data collection materials, supplemental analytic results, and the variables used for design effects tables. (Contains 13 figures and 55 tables.) (SLD)

Beginning Postsecondary Students Longitudinal Study Second Follow-up (BPS:90/94)

*This handbook introduces the reader to the thought-provoking research on the neural foundations of human intelligence. Written for undergraduate or graduate students, practitioners, and researchers in psychology, cognitive neuroscience, and related fields, the chapters summarize research emerging from the rapidly developing neuroscience literature on human intelligence. The volume focusses on theoretical innovation and recent advances in the measurement, modelling, and characterization of the neurobiology of intelligence differences, especially from brain imaging studies. It summarizes fundamental issues in the characterization and measurement of general intelligence, and surveys multidisciplinary research consortia and large-scale data repositories for the study of general intelligence. A systematic review of neuroimaging methods for studying intelligence is provided, including structural and diffusion-weighted MRI techniques, functional MRI methods, and spectroscopic imaging of metabolic markers of intelligence.*
