What causes bear attacks? When should you play dead and when should you fight an attacking bear? What do we know about black and grizzly bears and how can this knowledge be used to avoid bear attacks? And, more generally, what is the bear's future? Bear Attacks is a thorough and unflinching landmark study of the

attacks made on men and women by the great grizzly and the occasionally deadly black bear. This is a book for everyone who hikes, camps, or visits bear country--and for anyone who wants to know more about these sometimes fearsome but always fascinating wild creatures.

Enos A. Mills shares his memories of the bears who had spent years observing them in the wild. He'd follow them not to track and kill them, but to observe and learn their habits. He also rarely, if ever, carried a gun. He was also never threatened by the animals. Excerpt: "One autumn day, while I was watching a

little cony stacking hay for the winter, a clinking and rattling of slide rock caught my attention. On the mountain-side opposite me, perhaps a hundred yards away, a grizzly bear was digging in an enormous rock-slide. He worked energetically. Several slabs of rock were hurled out of the hole and tossed down the

mountain-side. Stones were thrown right and left. I could not make out what he was after, but it is likely that he was digging for a woodchuck."
