**This collaborative study between the NRC and the Chinese Academy of Engineering (CAE) addresses the problems facing China in the next twenty years as it attempts to provide personal transport desired by millions of Chinese, while preserving the environment and the livability of its cities. According to Song Jian, president of the CAE, the decision has already been taken to produce a moderate cost family car in China, which will greatly increase the number of vehicles on the roads. This study explores the issues confronting the country, including health issues, the challenge to urban areas, particularly the growing number of megacities, environmental protection, infrastructure requirements, and technological options for Chinese vehicles. It draws on the experience of the United States and other countries and review model approaches to urban transportation and land use planning. Recommendations and policy choices for China are described in detail. The ultimate used car guide lists the best and worst used cars, summarizes the marketplace, shares advice on web shopping, discusses author insurance, and shares tips on buying and selling. The delivery of entire divisions to battlefields behind enemy lines by parachute and glider was a unique feature of World War II, and by the end of the war the US Army deployed the largest airborne force in the world, created in only three years, and boasting such impressive units as the 82nd "All American" and 101st "Screaming Eagles." This book details the organization and operation history of these units throughout the war in Northwest Europe from 1944 to 1945, covering the desperate night drops over Normandy in support of the D-Day invasions, through the capture of Nijmegen during Operation Market-Garden to Operation Varsity,

the last great airborne operation of the war to secure the crossing of the Rhine.

*In Search of Sublet: A Story of Wyoming is a story of a mans search for an abandoned coal mining town of the early 1900s in the High Plains Desert of southwest Wyoming; the boyhood home of his father, and about the places that were visited and the people that were met along the way. The search and associated travels occurred during three separate journeys within an 11-year period. It is, in part, an ancestral biographical sketch of the authors paternal side of the family, as well as a sentimental journey to discover what remained, if anything, of the site of his fathers boyhood home; a place his father spoke of so often during his lifetime, but never was able to revisit. What began as a curious inquiry into the location of a coal town turned into a quest to unearth the past. The author writes from the heart, but attempts to refrain from being too nostalgic. A comprehensive and authoritative reference work on the world's most famous car manufacturer. All the landmark Ford models, such as the Model T, the Mustang and the Thunderbird, are specially featured, with pictures, the history of their development, and detailed specifications.*

*Provides information on the new features of current car and truck models, lists advantages and disadvantages, safety features, crash ratings, and specifications, and rates and reviews each vehicle.*

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

Environmental life cycle assessment is often thought of as cradle to grave and therefore as the most complete accounting of the environmental costs and benefits of a product or service. However, as anyone who has done an environmental life cycle assessment knows, existing tools have many problems: data is difficult to assemble and life cycle studies take months of effort. A truly comprehensive analysis is prohibitive, so analysts are often forced to simply ignore many facets of life cycle impacts. But the focus on one aspect of a product or service can result in misleading indications if that aspect is benign while other aspects pollute or are otherwise unsustainable. This book summarizes the EIO-LCA method, explains its use in relation to other life cycle assessment models, and provides sample applications and extensions of the model into novel areas. A final chapter explains the free, easy-to-use software tool available on a companion website. (www.eiolca.net) The software tool provides a wealth of data, summarizing the current U.S. economy in 500 sectors with information on energy and materials use, pollution and greenhouse gas discharges, and other attributes like associated occupational deaths and injuries. The joint project of twelve faculty members and over 20 students working together over the past ten years at the Green Design Institute of Carnegie Mellon University, the EIO-LCA has been applied to a wide range of products and services. It will prove useful for research, industry, and in economics, engineering, or interdisciplinary classes in green design.
