Advancements in research in psychological science have afforded great insights into how our minds work. Making an Impact on Mental Health and Illness analyzes contemporary, international research to examine a number of core themes in mental health, such as mindfulness and attachment, and provide an understanding of the sources of mentally ill health and strategies for remediation. The originality of this work is the embedding of psychological science in an evolutionary approach. Each chapter discusses the context of a specific research project, looking at the methodological and practical challenges, how the results have been interpreted and communicated, the impact and legacy of the research, and the lessons learnt. As a whole, the book looks at how social environments shape who we are and how we form relationships with others, which can be detrimental, but equally a source of flourishing and wellbeing. Covering a range of themes conducive to understanding and facilitating improved mental health, Making an Impact on Mental Health and Illness is invaluable reading for advanced students in clinical psychology and professionals in the mental health field.

A two-man undercover team working for U.S. Customs to disrupt drug smuggling across the Mexican border is missing. The school teacher brother of one missing team member finds their safe house and learns about their mission and the high tech electronics and weapons they use. Since he knows nothing about how spooks operate, the teacher hires a Native American Viet Nam veteran to help him track down the men. Together, the two amateurs slip into drug cartel territory and begin their search for the covert team, or their bodies. Before long, the amateurs discover the missing team is in jail. However, they don't know they were betrayed by a U.S. Customs official who is dirty with drug money payoff. Recruiting some locals, the amateurs formulate a plan to break the team out of jail, not realizing their movements are being monitored by the highest U.S. espionage bureau, the NSA.

A motorcycle 's electrical system can be daunting to even the most adept home mechanic. And yet, the more complex these systems become—and the more important to a motorcycle 's function—the more useful, even critical, it will be to know something about them. That 's where this book comes in with a user-friendly guide to understanding, diagnosing, and fixing the electrical systems and components that make a bike run . . . or falter. Veteran technician Tracy Martin explains the principles behind motorcycle electrical systems and how they work. He details the various tools, such as multimeters and test lights, that can be used to evaluate and troubleshoot any vehicle's electrical problem. And in several hands-on projects, he takes readers on a guided tour of their vehicle 's electrical system, along the way giving clear, step-by-step instructions for diagnosing specific problems.

'Poster Art' showcases an international collection of graphic design in this continually developing area. From mass-market designs to exclusive, limited-edition works, it explores both the creative inspiration behind the work, as well as looking at the practical considerations.

In the old days all a person needed to build a killer custom motorcycle was a bike, a set of tools, a little know-how, and a creative vision. But with the rise of the high-dollar, haute moteur Gucci choppers, the true custom bike has gotten out of most riders' reach, right? Dead wrong. In this book Jose de Miguel, a custom builder from way back, sets out to prove that those good old days never ended. In the clearest and simplest terms, he shows readers how they can turn odds and ends found around the shop into one-off motorcycle parts--and make a cheap, run-of-the-mill custom build into a drop-dead show stopper. Following de Miguel's lead, along with his straightforward illustrations, any resourceful owner with rudimentary mechanical skills, a basic tool kit, and--most importantly--a modicum of imagination can build the bobber of his dreams for less than the price of a new bike.
