Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power

The adventurous spirit of Texans has led to much travel lore, from stories of how ancestors first came to the state to reflections of how technology has affected the customs, language, and stories of life on the go. This Publication of the Texas Folklore Society features articles from beloved storytellers like John O. West, Kenneth W. Davis, and F. E. Abernethy as well as new voices like Janet Simonds. Chapters contain traditional Gone to Texas accounts and articles about people or methods of travel from days gone by. Others are dedicated to trains and cars and the lore associated with two-wheeled machines, machines that fly, and machines that scream across the land at dangerous speeds. The volume concludes with articles that consider how we fuel our machines and ourselves, and the rituals we engage in when were on our way from here to there.

Chlorophyll a Fluorescence: A Signature of Photosynthesis highlights chlorophyll (Chl) a fluorescence as a convenient, non-invasive, highly sensitive, rapid and quantitative probe of oxygenic photosynthesis. Thirty-one chapters, authored by 58 international experts, provide a solid foundation of the basic theory, as well as of the application of the rich information contained in the Chl a fluorescence signal as it relates to photosynthesis and plant productivity. Although the primary photochemical reactions of photosynthesis are highly efficient, a small fraction of absorbed photons escapes as Chl fluorescence, and this fraction varies with metabolic state, providing a basis for monitoring quantitatively various processes of photosynthesis. The book explains the mechanisms with which plants defend themselves against environmental stresses (excessive light, extreme temperatures, drought, hyper-osmolarity, heavy metals and UV). It also includes discussion on fluorescence imaging of leaves and cells and the remote sensing of Chl fluorescence from terrestrial, airborne, and satellite bases. The book is intended for use by graduate students, beginning researchers and advanced undergraduates in the areas of integrative

plant biology, cellular and molecular biology, plant biology, biochemistry, biophysics, plant physiology, global ecology and agriculture.

Vita Sackville-West, novelist, poet, and biographer, is best known as the friend of Virginia Woolf, who transformed her into an androgynous time-traveler in Orlando. The story of her love affair with Violet Keppel Trefusis in 1920 is one of intrigue and bewilderment. In *Portrait of a Marriage*, Nigel Nicolson combines his mother's vivid memoir of escapade with what he learned from copious family letters and explains the context of this romantic crisis. He also describes how Vita Sackville-West and Harold Nicolson went on to live the rest of their lives in harmonious marriage.

"I set out to find a group of people who, like me, were possessed by a history they had never lived." The daughter of Holocaust survivors, Helen Epstein traveled from America to Europe to Israel, searching for one vital thin in common: their parent's persecution by the Nazis. She found: • Gabriela Korda, who was raised by her parents as a German Protestant in South America; •

Albert Singerman, who fought in the jungles of Vietnam to prove that he, too, could survive a grueling ordeal; • Deborah Schwartz, a Southern beauty queen who—at the Miss America pageant, played the same Chopin piece that was played over Polish radio during Hitler's invasion. Epstein interviewed hundreds of men and women coping with an extraordinary legacy. In each, she found shades of herself.

Many people have written memoirs of childhood trauma but few have written as beautifully about the psychological obstacles and creative aids to healing. In midlife, well settled in marriage and motherhood, Helen Epstein is impelled to revisit her growing up in a family and community of Holocaust survivors. Epstein, the daughter of Czech anti-Communist refugees, contacts her first love, the son of blacklisted American Communists, to be her partner in the investigation of their adolescent past. In this twist on the age-old Romeo and Juliet story, the two uncover more than they bargained for. This memoir stands alone but can also be seen as the third of a trilogy, following *Children of the Holocaust: Conversations with Sons and Daughters of Survivors* (Putnam, 1979) and *Where She Came From: A Daughter's Search for Her Mother's History* (Little, Brown, 1997), both still in print and widely translated. As Gloria Steinem wrote about the second, "In Epstein's hands, truth becomes not only stranger than fiction but more magnetic." Veteran journalist Helen

Epstein employs a full arsenal of narrative and investigative techniques. She researches the literature of trauma and false memory, and draws on the tools of psychoanalysis, social and cultural history, and journalism. She also draws on her own eight years of work with a psychoanalyst. The story Epstein tells stretches back to the Holocaust that damaged everything in its path. This is a rare narrative, Sherry Turkle has written, *¿* in which everyone becomes more human and multi-dimensional as it unfolds. *¿*

China is urbanizing at an unprecedented speed. Filmmakers, artists, musicians, and writers all try to come to terms with the changes of their city. How is the Chinese city-as-spectacle, visualised and thus imagined and reimagined, if not contested, in art and popular culture? What are the possible escape routes from a completely commodified cityscape? How to realign artistic expressions of the spectacle with everyday practices? The imaginations of the Chinese city in art and popular culture that this book explores are not taken as merely mirroring or reflecting reality, on the contrary, they are part and parcel of the construction, destruction and deconstruction of that reality. As such, these imaginations are enmeshed in the social, material and political realities that produce

Arriving in America in 1904, Carlo Tresca began a nearly forty-year stretch as an active

revolutionary. Nunzio Pernicone's definitive biography chronicles Tresca's larger-than-life personality, his revolutionary apprenticeship in Sulmona, Italy, and his subsequent career as fighter for liberty until his untimely death in 1943. The story of his life - as newspaper editor, labor agitator, anarchist, anti-communist, street fighter, and opponent of fascism - illuminates the lost world of Italian-American radicalism. Among friends and comrades Tresca counted revolutionary luminaries such as Elizabeth Gurley Flynn, Big Bill Haywood, Alexander Berkman, Emma Goldman, and countless sovversivi. From his work on behalf of the IWW, to his editorship of numerous papers, including *Il Proletario* and *Il Martello*, and his assassination on the streets of New York City, Tresca's passion left a permanent mark on the American map.

Rarely is a reader exposed to such an extraordinary, multifaceted presentation of aerospace technology as Bob Brulle narrates in this book. After returning from duty as a combat fighter pilot in World War II, this Belgian immigrant developed a multitalented and innovative aerospace career path that addressed many of the aerospace professions. Along the way he forged a career in the aviation and space field that resulted in his participating in several of the most momentous aerospace achievements of the past century. He also expanded his education through hard work to a level at which he was qualified to teach graduate-level aerospace engineering courses. It is interesting to follow how the analysis and design techniques of aerospace vehicles progressed over the years, which incidentally reveals the

large role that the computer played in making that possible. The story on the early Cape Canaveral operations was amusing and showed that enterprising innovations played a large role in a successful undertaking. Some of the projects described were a surprise, as I had never heard of them, like reading how a pencil-shaped missile was built that could fly and maneuver over an intercontinental distance at a high hypersonic velocity. He also described how American engineers and scientists fought the Cold War battle for technological supremacy on their desks and in their laboratories. The initiatives by which this enterprising engineer develops his technical approach to a project are very informative and offer the reader an insight into the workings of successful operations. He achieves an interesting behind-the-scenes look at how aerospace history is made by weaving in the historical significance of these projects as they are developed. As a former aeronautical engineer at the rapidly growing McDonnell Aircraft Corporation, Bob gives us an interesting exposure to the importance of top management's relationship with the workforce in a successful company. "Mr. Mac" made it a point to make all his employees team members by frequent communication and friendly association.

Now in its second edition and still the only book of its kind, this is an authoritative treatment of all stages of the coating process -- from body materials, paint shop design, and pre-treatment, through primer surfacers and top coats. New topics of interest covered are color control, specification and testing of coatings, as well as quality and supply concepts, while valuable information on capital and legislation aspects is given. Invaluable for engineers in the automotive and paints and coatings industry as well as for students in the field.

Balefires is the long-awaited collection of David Drake's weird and fantastic fiction. Before Drake was a best-selling author of military science fiction, he was a prolific writer of horror and fantasy short fiction. Balefires collects some of his earliest professional sales (including his first sale to Arkham House.) In addition, Balefires brings together

many stories set in the worlds of his fantasy novels (Ranks of Bronze, Lord of the Isles, etc.) and contains original fiction. More than just a collection of stories, Balefires features extensive story notes that chronicle the development of the writing career of one of the science fiction's most popular writers, and provides detailed snapshots of the larger than life editors, publishers and writers that Drake has worked with throughout his career. Skyhorse Publishing, under our Night Shade and Talos imprints, is proud to publish a broad range of titles for readers interested in science fiction (space opera, time travel, hard SF, alien invasion, near-future dystopia), fantasy (grimdark, sword and sorcery, contemporary urban fantasy, steampunk, alternative history), and horror (zombies, vampires, and the occult and supernatural), and much more. While not every title we publish becomes a New York Times bestseller, a national bestseller, or a Hugo or Nebula award-winner, we are committed to publishing quality books from a diverse group of authors.

A template for pranksters, artists, adventurers and anyone interested in rampant creativity, for years to come. Tales Of The San Francisco Cacophony Society tells the history of the most influential underground cabal that you have never heard of. Rising from the ashes of the

mysterious and legendary Suicide Club, The Cacophony Society, at its zenith, hosted chapters in over a dozen major cities, and influenced much of what was once called the underground. Flash Mobs, Urban Exploration, and Culture Jamming are a few of the pop culture trends that Cacophony helped kick off. Chuck Palahniuk's Fight Club, Burning Man and Internet social networking powerhouse Laughing Squid were informed and inspired by Cacophony. The Burning Man Festival actually began as a Cacophony event as did the annual, and now world-wide SantaCon. Cacophony events could range from something as simple as climbing the Golden Gate Bridge or having a discussion over drinks about a movie seen together, to something as elaborate as The Atomic Café -- an event involving a hundred bedraggled "nuclear holocaust Survivors" mounting elaborate costumed rituals throughout the bowels of a massive abandoned tooth paste factory. Yes.... Cacophony was that strange. Cacophony's heyday was concurrent with the rise of the internet. The story of this group is of historical significance for this reason. Information about upcoming pranks, street theater and other events hosted by Cacophony was spread by paper flyers posted on telephone poles and left in coffee shops, by the Societies mailer "Rough Draft" and by word of mouth. Then, with the genesis of personal computing and social networking, the jokers, artists and troublemakers of

Cacophony were among some of the first non-geeks to explore the power of this new and world changing way of communicating. Burning Man, Urban Exploration, flash mobs and the like were avenues of creativity with their roots in Cacophony, that spread like wildfire through the mechanism of these new communication technologies.

Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is "a computer-age detective story, instantly fascinating [and] astonishingly gripping"

(Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code

name was "Hunter"—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

A most untraditional love story, this is the celebrated tale of Henry DeTamble, a dashing, adventuresome librarian who inadvertently travels through time, and Clare Abshire, an artist whose life takes a natural sequential course. Henry and Clare's passionate affair endures across a sea of time and captures them in an impossibly romantic trap that tests the strength of fate and basks in the bonds of love.
