Ford's 351

Cleveland was designed to be a 'mid-sized' V-8 engine, and was developed for higher performance use upon its launch in late 1969 for the 1970 models. This unique design proved itself under

the hood of Ford's Mustang, among other high performance cars. The Cleveland engine addressed the major shortcoming of the Windsor engines that preceded it, namely cylinder head air flow. The Windsor engines

to the legion of BMW
3-series owners who
adore their cars and
enjoy restoring,
modifying, and
maintaining them to
perfection; its format
allows more of these
enthusiasts to get out
into the garage and
work on their BMWs-
and in the process, to
save a fortune.
