This report describes a new system of credentialing that has arisen in the information technology and telecommunications industries over the past decade. It compares this system to traditional higher education, identifying both similarities and dissimilarities, and points to some cases in which the two interact.... The summary section of this report emphasizes the major themes of the certification system and its relationship to higher education: 1. The system is global and operates in many languages. 2. The student, not the institution, is at the center of the system. 3. The system has brought competency-based education and performance assessment to a status they have never enjoyed within traditional higher education. 4. Certification replace neither experience nor degrees, and the IT system does not pretend to be higher education, the summary also indicates the critical need for more information on certification candidates and providers of course work, since the new system is now large enough to play a role in state and national planning for postsecondary education. Principles and Applications with Practical Perspectives

"This report summarizes the approach, activities, and results of a study to evaluate the potential safety benefits of Plastics and Composites Intensive Vehicles (PCIVs), to enable their deployment by 2020. The main goals were to review and assess the state of knowledge in order to identify gaps, key research needs, and the challenges and opportunities for safety enhancements. PCIV-related safety enhancements that could benefit an aging driver population were selected as a priority research focus. The Situation Analysis was conducted, based on a review of technical literature, national research efforts on automotive light-weighting and the crash safety performance of advanced materials, complemented by a focused survey of diverse subject matter experts. The analysis identified near-term, midterm, and long-term research needs and priorities to facilitate future PCIV deployment. A PCIV Safety Roadmap was developed, which synthesizes the study findings and outlines follow-on research and milestones to measure progress towards the design, development and technology integration of fuel-efficient and safe PCIVs by 2020" Technical report documentation page.

Rethinking Music Performance for the 21st-Century Musician

A legend in the car industry reveals the philosophy that's starting to turn General Motors around. In 2001, General Motors hired Bob Lutz out of retirement with a mandate to save the company by making great cars again. He launched a war against penny pinching, office politics, turf wars, and risk avoidance. After declaring bankruptcy during the recession of 2008, GM is back on track thanks to its embrace of Lutz's philosophy. When Lutz got into the auto business in the early sixties, CEOs knew that if you captured the public's imagination with great cars, the money would follow. The car guys held sway, and GM dominated with bold, creative leadership and iconic brands like Cadillac, Buick, Pontiac, Oldsmobile, GMC, and Chevrolet. But then GM's leadership began to put their faith in analysis, determined to eliminate the "waste" and "personality worship" of the bygone creative leaders. Management got too smart for its own good. With the bean counters firmly in charge, carmakers (and much of American industry) lost their single-minded focus on product excellence. Decline followed. Lutz's commonsense lessons (with a generous helping of fascinating anecdotes) will inspire readers at any company facing the bean counter analysis-paralysis menace.
