***Eugene W. Holland provides an excellent introduction to Gilles Deleuze and Felix Guattari's Anti-Oedipus which is widely recognized as one of the most influential texts in philosophy to have appeared in the last thirty years. He lucidly presents the theoretical concerns behind Anti-Oedipus and explores with clarity the diverse influences of Marx, Freud, Nietzsche and Kant on the development of Deleuze & Guattari's thinking. He also examines the wider implications of their work in revitalizing Marxism, environmentalism, feminism and cultural studies.***

***This book examines the early development of obsessive-compulsive disorder (which now affects over one million children and adolescents) and describes two effective treatments: behavior modification and drug treatment with clomipramine. Based on research from the National Institute of Mental Health, this book's theoretical sections probe the frontiers of today's scientific understanding of this disorder and present information applicable to all age groups. Firsthand accounts from patients provide a depth of***

***detail and clinical richness that will be greatly appreciated by all clinicians treating children and adolescents who have this disorder. Arguably the greatest military commander in the history of the samurai, Toyotomi Hideyoshi rose from the ranks of the peasantry to rule over all Japan. A student of the great unifier Oda Nobunaga, Hideyoshi would later avenge the murder of his master at the battle of Yamazaki. After consolidating his position, Hideyoshi went on the offensive, conquering the southern island of Kyushu in 1587 and defeating the Hojo in 1590. By 1591, he had accomplished the reunification of Japan. This book looks at the complete story of Hideyoshi's military accomplishments, from his days as a tactical leader to his domination of the Japanese nation.***

*Future economic growth lies in the value of experiences and transformations--good and services are no longer enough. We are on the threshold, say authors Pine and Gilmore, of the Experience Economy, a new economic era in which all businesses must orchestrate memorable events for their customers. The Experience Economy offers a creative, highly original, and yet eminently practical strategy for companies to script and stage the experiences that will transform the value of what they produce. From America Online to Walt Disney, the authors draw from a rich and varied mix of examples that showcase businesses in the midst of creating personal experiences for both consumers and businesses. The authors urge managers to look beyond traditional pricing factors like time and cost, and consider charging for the value of the transformation that an experience offers. Goods and services, say Pine and Gilmore, are no longer enough. Experiences and transformations are the basis for future economic growth, and The Experience Economy is the script from which managers can begin to direct their own transformations.*

You may not realize it but simple, irrelevant factors can have profound consequences on your decisions and behavior, often diverting you from your original plans and desires. Sidetracked will help you identify and avoid these influences so the decisions you make do stick—and you finally reach your intended goals. Psychologist and Harvard Business School professor Francesca Gino has long studied the factors at play when judgment and decision making collide

with the results of our choices in real life. In this book she explores inconsistent decisions played out in a wide range of circumstances—from our roles as consumers and employees (what we buy, how we manage others) to the choices that we make more broadly as human beings (who we date, how we deal with friendships). From Gino's research, we see when a mismatch is most likely to occur between what we want and what we end up doing. What factors are likely to sway our decisions in directions we did not initially consider? And what can we do to correct for the subtle influences that derail our decisions? The answers to these and similar questions will help you negotiate similar factors when faced with them in the real world. For fans of Dan Ariely and Daniel Kahneman, this book will help you better understand the nuances of your decisions and how they get derailed—so you have more control over keeping them on track.

Teaching In Lifelong Learning: A Guide To Theory And Practice

**This book enables STEM researches to write effective papers for publication as well as other research-related texts such as a doctoral thesis, technical report, or conference abstract. Science Research Writing uses a reverse-engineering approach to writing developed from extensive work with STEM researches at Imperial College London. This approach unpacks current models of STEM research writing and helps writers to generate the writing tools needed to operate those models effectively in their own field. The reverse-engineering approach also ensures that writers develop future-proof strategies that will evolve alongside the coming changes in research communication platforms. The Second Edition has been extensively revised and updated to represent current practice and focuses on the writing needs of both early-stage doctoral STEM researches and experienced professional researches at the highest level, whether or not they are native speakers of English. The book retains the practical, user-friendly format of the First Edition, and now contains seven units that deal separately with the components of written STEM research**

**communication: Introduction, Methods, Results, Discussion, Conclusion, Abstract and Title, as well as extensive FAQ responses and a new Checklist and Tips section. Each unit analyses extracts from recent published STEMM journal papers to enable researchers to discover not only what to write, but, crucially, how to write it. The global nature of science research requires fast, accurate communication of highly complex information that can be understood by all participants. Like the First Edition, the Second Edition is intended as a fast, do-it-yourself guide to make both the process and the product of STEMM research writing more effective.**

by Professor Alessandro Sinatra xi There are two categories which divide academic writing. The first category is made up of those which gather and systemize a developed thought, while the second is made up of those which detail a learning process which is presently occurring. This book belongs to the second category. It is intended to offer evidence of a still continuing research process which began three

years ago. This research, undertaken simultaneously in Europe, the United States and Japan, has provided interesting evidence as to the conditions which must be present within a company in order to ensure continuous change. The object of our research has been to galvanize academics and managers into a debate which is especially relevant today: that of the ability of a company to anticipate or respond to changes which are occurring in its environment. Today more than ever, the ability to change culture and organizational structure are conditions which ensure a company's success, or more often, permit its survival. This book offers ten case studies about ten different large international firms, and about how they approached the problem of strategic change. In addition, there are ten articles which analyze the empirical evidence presented in the cases, and which try to provide and develop a general framework which can be used in a variety of situations. The cases represent an empirical base of reference. For the manager, they can serve as a source of benchmarking with the present situation of her/his company.

The twelve essays in this book demonstrate the importance of bringing history back into historical materialism. They combine the discussion of Marx's categories with historical work on a wide range of themes and periods (the early middle ages, 'Asiatic' regimes, agrarian capitalism, etc.).

Providing clinicians and patients with the latest developments in research, this new edition is a succinct and practical introduction to the diagnosis, evaluation and management of OCD and other related disorders. Part of the Oxford Psychiatry Library series, this pocketbook includes individual chapters on

the phenomenology, pathogenesis, pharmacotherapy and psychotherapy of OCD and other related disorders, and features fully updated content and research. The book also includes a helpful resources chapter, and an Appendix with summaries of the major rating scales used to assess patients with OCD, which will be of use to both clinicians and patients. Obsessive-compulsive disorder (OCD) and Obsessive-compulsive-related disorders (OCRDs) are anxiety disorders characterized by obsessions and compulsions, and varying degrees of anxiety and depression. OCRDs are considered to be one of the most disabling of psychiatric disorders and they present a tremendous economic and social burden, both for the affected individual, their family, and for society at large. In contrast to other psychiatric conditions of a comparable or lesser prevalence and patient burden, relatively little is understood about the aetiology, and cognitive effects of OCRDs.

***Today opponents of large-scale dam projects in China, rather than being greeted with indifference or repression, are part of the hydropower policymaking process itself. What accounts for this dramatic change in this critical policy area surrounding China's insatiable quest for energy? In China's Water Warriors, Andrew C. Mertha argues that as China has become increasingly market driven, decentralized, and politically heterogeneous, the control and management of water has transformed from an unquestioned economic imperative to a lightning rod of bureaucratic infighting, societal opposition, and open protest. Although bargaining has always been present in Chinese politics, more recently the media, nongovernmental organizations, and other activists—actors hitherto denied a seat at the table—have emerged as serious players in the policy-***

***making process. Drawing from extensive field research in some of the most remote parts of Southwest China, China's Water Warriors contains rich narratives of the widespread opposition to dams in Pubugou and Dujiangyan in Sichuan province and the Nu River Project in Yunnan province. Mertha concludes that the impact and occasional success of such grassroots movements and policy activism signal a marked change in China's domestic politics. He questions democratization as the only, or even the most illuminating, indicator of political liberalization in China, instead offering an informed and hopeful picture of a growing pluralization of the Chinese policy process as exemplified by hydropower politics. For the 2010 paperback edition, Mertha tests his conclusions against events in China since 2008, including the Olympics, the devastating 2008 Wenchuan earthquake, and the Uighar and Tibetan protests of 2008 and 2009.
