The legendary story of Harley-Davidson's rise to power--not only as an international industry leader but as an American cultural icon. How did the Harley-Davidson motorcycle, originally a machine for casual riders, evolve into a symbol of defiance and liberation? An embellished 1947 Life magazine article about a California town terrorized by gangs of motorcycle punks changed the world's perception of motorcycles from sporty machines to menaces-to-society, and as the loudest and heaviest bikes on the market, Harley-Davidsons were considered the baddest of them all. Outlaw Machine chronicles the fascinating social history that built Harley-Davidson's reputation--including the rise of Hell's Angels and the counterculture classic Easy Rider--and, more entrancing still, the bike's and its company's storybook rise to international fame and popularity. Written by renowned automotive journalist Brock Yates, Outlaw Machine is the definitive book on the Harley-Davidson and its place in American culture.

The Standards of Conduct Office of the Department of Defense General Counsel's Office has assembled an "encyclopedia" of cases of ethical failure for use as a training tool. These are real examples of Federal employees who have intentionally or unwittingly violated standards of conduct. Some cases are humorous, some sad, and all are real. Some will anger you as a Federal employee and some will anger you as an American taxpayer. Note the

multiple jail and probation sentences, fines, employment terminations and other sanctions that were taken as a result of these ethical failures. Violations of many ethical standards involve criminal statutes. This updated (end of 2009) edition is organized by type of violations, including conflicts of interest, misuse of Government equipment, violations of post-employment restrictions, and travel.

There are plenty of books and movies about what different soldiers experienced in war - but few grind out the details of why they do it. Sons of the Flag brings together the veterans from each of the American wars from WWII to the present and the veteran firefighters of 9/11 who served during the greatest attack on American soil. Each contributor tells precisely why they do what they do - putting country and brotherhood before their own safety. Weaving their chapters together, author Ryan "Birdman" Parrott, an American veteran, shares the journey that led from being a self-described screw-up to becoming the visionary and leader of Sons of the Flag, an organization dedicated to burn survivors. The contributors associate key moments in their lives that impacted them forever in putting their brothers to the right and left before themselves. Parrott asks readers to imagine a country where all citizens were as dedicated as these men in serving their fellow Americans.

This book discusses regional and international climate-change, air-pollution and human-health scenarios. The research, from both industrialized and developing countries, focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, pollen, smoke and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires and worse pollen outbreaks, according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk, killing 7 million people in 2014 (compared to 0.4 million deaths due to malaria). Deteriorating air quality will most affect the elderly, children, people with chronic ill-health and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India. A study on the air pollution in the USA, suggests that more than half of US population lives in areas with potentially dangerous air pollution, and about six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally the authors consider the various measures that different countries and groups of countries, like the European Union, have adopted to mitigate the problems

arising from climate change and to safeguard the health of population. The book examines the increasing incidence of diseases largely caused by climate change. The countries/regions covered in this study include the USA, Northern Europe (U.K.), Southern Europe (Italy), Canada, Australia, East Asia, Russia, Hong Kong, Taiwan, Thailand, Malaysia, Indonesia, India, South Africa, Mexico, Brazil, Caribbean countries, and Argentina.

As a long-time Deputy Sheriff in Marin County, Weldon lived through some very interesting times relevant to law enforcement, participating in fighting the most vicious crimes emanating from the hottest issues of the day. His many memorable experiences, in and out of uniform, were always in the interests of keeping the peace. The book's subtitle, ". . . in Wild and Woolly West Marin; a collection of vivid vignettes," says a lot about its contents. The author's tales brim with a variety of countercultural events, and the many ways that humans succumb to evil and occasionally rise in redemption. Many revelations are devilishly humorous but all reflect the image of a conscientious man who has, fortunately for Marin County and California society, invested the major part of his life in keeping the sane balance between extremes of behavior found in the Golden State.
