Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

AdrenalineMoto is an authorized dealer of Parts-Unlimited and claims no ownership or rights to this catalog. The Parts Unlimited 2014 Street catalog is more than "just a book." It is designed to help you and your customers get the most out of your passion for powersports. It showcases the new, exciting, in-demand products, as well as highlighting trusted favorites. The well-organized catalog sections make it easy to find the items you want. And every part is supported with the latest fitment information and technical updates available. Looking for tires? See the Drag Specialties/Parts Unlimited Tire catalog. It has tires, tire accessories and tire/wheel service tools from all the top brands. And for riding gear or casual wear, see the Drag Specialties/Parts Unlimited Helmet/Apparel catalog. Combine all three catalogs for the most complete powersports resource of 2014.

The goal of this book is to gain a clear picture of the current status and future challenges with regard to the digitalization of the supply chain – from the perspective of the suppliers, the manufacturers, and the customers. They were the target groups of the book. Digitization has touched upon all aspects of businesses, including supply chains. Technologies such as RFID, GPS, and sensors have enabled organizations to transform their existing hybrid (combination of paper-based and IT-supported processes) supply chain structures into more flexible, open, agile, and collaborative digital models. Unlike hybrid supply chain models, which have resulted in rigid organizational structures, unobtainable data, and disjointed relationships with partners, digital supply chains enable business process automation, organizational flexibility, and digital management of corporate assets. In order to reap maximum benefits from digital supply chain models, it is important that companies internalize it as an integral part of the overall business model and organizational structure. Localized disconnected projects and silo-based operations pose a serious threat to competitiveness in an increasingly digital world. The technologies discussed in this text – artificial intelligence, 3D printing, Internet of things, etc. – are beginning to come together to help digitize, automate, integrate, and improve the global supply chains. It's certainly an exciting and challenging time for both new supply chain professionals and long-time supply chain professionals.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and

supermoto--promising a solution to virtually any handling problem.

Lough Corrib in the West of Ireland, one of the worlds premier game fishing lakes, the largest lake in the Republic, and now one of the most important marine archaeological sites in Europe. This book of beautiful full colour charts on photo paper shows all of the lakes famed shallows, its deep holes and drop-offs, launch sites, local names, depths, contours and historic points of interest, and much more. A "must have" if you are sailing or fishing on Corrib

A wall-mounted semi-cylindrical model fitted with a single wrap-around in (WAF) has been investigated numerically and experimentally, with the objective of characterizing the mean and turbulent flowfield near a WAF in a supersonic flowfield. Numerical and experimental results are used to determine the nature of the flowfield and quantify the effects of fin curvature on the character of the flow near WAFs. This research has been motivated by the need to identify possible sources of a high-speed rolling moment reversal observed in sub-scale flight tests. Detailed mean flow and turbulence measurements were obtained in the AFIT Mach 3 wind tunnel using conventional probes and cross-wire hot-film anemometry at a series of stations upstream of and aft of the fin shock/boundary layer interaction. Hot-film anemometry results showed the turbulence intensity and Reynolds shear stress in the fuselage boundary layer to be far greater on the concave side of the fin than on the convex side. Mean flow was also obtained in the AFIT Mach 5 wind tunnel using conventional pressure probes. Numerical results were also obtained at the test conditions employing the algebraic eddy viscosity model of Baldwin and Lomax. Correlation with experimental data suggests that the calculations have captured the flow physics involved in this complicated flowfield. The calculations, corroborated by experimental results, indicate that a vortex exists in the fin/body juncture region on the convex side of the fin. This feature is not captured by the oft-used inviscid methods, and can greatly influence the pressure loading on the fin near the root. "Cycle World Columnist Peter Egan shares his tales from the road, motorcycling philosophy, and keen observations about the two-wheeled life in this fresh collection of motorcycle musings delivered in his signature wise but amusing style"--

The Mazda Miata is one of the most popular sports cars on the road today. In production for more than 20 years, the Miata's popularity has grown, and the number of aftermarket components available to the Miata enthusiast has grown, too. This immense selection of parts has made it difficult for many would-be modifiers to choose the proper combination that will help them reach the goals they have set for their two-seaters. Author and Miata expert Keith Tanner has been modifying, repairing, building, and racing Miatas for years, and he will guide you through how to best modify your car to suit your needs, starting with an explanation on how everything works and how the various parts will interact. You'll not only learn what upgrades will help you reach your goals, but also how to adjust or modify what you have to make your car work at its best. From autocross to cross-country touring, the Miata can do it all. Keith Tanner tells you how to make it happen!

Few paint a more vivid or varied picture of the joys of riding than this collection of stories from a motorcycling life by Lance Oliver, who has spent more time than most of us thinking about writing about the art and practicalities of motorcycling.

Moto-journalist Clement Salvadori has been riding motorcycles since the age of 15 and traveling all of his life, accumulating well over a million miles in the saddle across more than 100 countries on six continents. No Thru Road covers 30 different trips he has taken, to places like Afghanistan and Zimbabwe, since his first ride through western Europe in 1957. The book is all original, though the subject may have appeared as a magazine article in a very different rendition. The book will appeal to adventure-travel enthusiasts and to motorcyclists and to all persuasions. Adventurous riders will thoroughly appreciate the book, as in the description of kick-starting a 500cc single - never easy to do - at 17,200 feet in the Tibetan Himalayas, going up to Cape Tribulation in Australia's Queensland in 1974 when the only access was via a once-a-week ferry across the Daintree River. Or riding a bike to Pamplona, Spain, in order to run with the bulls. Activists who want to get on their motorcycles and ride down into Mexico's Copper Canyon will enjoy the book, as will the arm-chair traveler who is happy about traveling from Peru's Great Inca Desert over the Andes Mountains to the Amazon basin. Clement's adventures are arranged so the reader can open the book to any chapter, be it Nepal, the Sahara, New Zealand or Viet Nam, and not have to worry about following a thread. Lots of adventures, lots of good reading, lots of photos and illustrations. This book provides excellent entertainment and a glimpse into life as a moto-journalist.

Bernt Spiegel's *The Upper Half of the Motorcycle* was a best-selling motorcycling book in its original German with multiple editions and printings to its credit. Now translated into English, its provocative message is available to a wider audience. Spiegel's metaphor considers the rider and the motorcycle as a single unit, the rider being the upper half. Taking a multidisciplinary approach, the author draws on anthropology, psychology, biology, physics, and other disciplines to analyze the theory and function of the man-machine unit.

Motorcycle riding is seen as a junction where people have created machines for personal transport and then become so adept at using them that the machine becomes like an extension of the rider themselves. The ultimate goal for riders is the integration of the man-machine interface and subsequent skill development to the point of virtuosity. Spiegel considers the various aspects of motorcycle riding that must be understood, practiced, and mastered before virtuosity can be attained. Many anecdotes, supplementary material, and in-depth treatment of specialized topics is contained in sidebars and footnotes. Numerous diagrams and photographs illustrate the book's principles allowing the reader to consider and develop their riding skill set.

Anyone who owns a Suzuki 4x4, and wonders what it is REALLY capable of, needs this book. It illustrates in intimate detail, with the aid of 175 colour photographs and diagrams, what each model can do and how to modify it in stages to maximise its off-road potential. The book also covers practical factors, such as choice of tyres, gearing selection and modification for various purposes. In addition, it explores the history and evolution of the marque and sets out the skills required to carry out the various procedures. As ever, this is presented in the well illustrated, easy to follow SpeedPro style. Get the most out of your Suzuki 4x4.

Xi San saved the life of a mysterious girl one night in his ravaged San Francisco neighborhood. He can't get her out of his mind, but believes that she's lost to him. Lin Kwan came to America to bring her scientist father Chinese medicinal herbs, hoping to stop the virus that killed most of the world's Caucasians before it mutates to infect the rest of the world. On her way to finding him, she meets again the man who once saved her, a man she can't forget. With a diverse group of fellow travelers, they head for St. Louis, where civilization is being rebuilt. Between them and safety, danger lurks—Gabriel, a self-styled religious leader and white supremacist, who has organized his army from Upper Midwest survivalist and militia followers, determined to take revenge for the white man. But Gabriel isn't their only enemy. Before they reach their destination, they will battle nature, prejudice and even those hidden among them who wish their destruction.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive--even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting--with lessons that go down easy. You'll be laughing and learning at the same time.

Our 1973 motorcycle ride took us from Beatrice, Nebraska, to Philmont Scout Ranch in New Mexico, Albuquerque, Phoenix, San Diego, LA, Vacaville, Lake Tahoe, Denver, and then back to Nebraska. We were teenagers, and we had relatives, friends, acquaintances, and girlfriends to see all along the journey. Some nights we camped out, others we stayed in a friend's travel trailer, and some nights we enjoyed regular beds and access to a swimming pool. Each of us rode a 350cc two-stroke motorcycles on the 3500-mile trip. We had no cell phones, roadside assistance insurance coverage, custom ear plugs, or sound systems. The early 70's was different than the 60's, but not that much different. The attraction of the open road and the Pacific Ocean was very powerful. None of us were worried about breaking down or the costs of the trip. We had to go see western America. And we did.

Language Education and Emotions presents innovative, empirical research into the influence of emotions and affective factors in language education, both in L1 and in foreign language education. It offers a comprehensive overview of studies authored and co-authored by researchers from all over the world. The volume opens and ends with "backbone" contributions by two of the discipline's most reputed scholars: Jane Arnold (Spain) and Jean-Marc Dewaele (United Kingdom). This book broadens our understanding of emotions, including well-known concepts such as foreign language anxiety as well as addressing the emotions that have only recently received scientific attention, driven by the positive psychology movement. Chapters explore emotions from the perspective of the language learner and the language teacher, and in relation to educational processes. A number of contributions deal with traditional, school-based contexts, whereas others study new settings of foreign language education such as migration. The book paints a picture of the broad scale of approaches used to study this topic and offers new and relevant insights for the field of language education and emotions. This book will be of great interest to academics, researchers and postgraduate students in the field of language education, psycholinguistics, sociolinguistics, and applied linguistics.

Old campers have an appeal that reaches back in time and can send your imagination soaring. Let's face it: they are cool. Who hasn't seen one parked on a boulevard with a "for sale" sign and pictured it bouncing along behind the family car, ready for adventure and fun? Unfortunately, campers are not quite homes, they are not quite cars, and they have their own unique systems and demands that make fixing and upgrading a challenge. Even if you have plenty of DIY experience, a camper speaks a foreign language. Consider Camper Rehab your Rosetta Stone for the language of Shasta, Dutchmen, or Airstream. This book is a top-to-bottom guide to getting a fifth-wheel, teardrop, or other camper trailer ready for the road and beyond. From basic troubleshooting to electrical and plumbing projects, replacing interior surfaces, and clever (sometimes "retro") decorating ideas, this book uses detailed illustrations, color photography, and a wealth of step-by-step, how-to information to get help you get your travel trailer into shape for your

next big--or little--adventure. And in case you haven't pulled the trigger on that trailer you're eying on Craigslist just yet, Camper Rehab also walks you through the process of evaluating a potential purchase, identifying which issues are fixable and which are dealbreakers, as well as how to spot hidden problems. Written by accomplished DIY author Chris Peterson, whose light and approachable tone is coupled with the hardworking DIY information you need, Camper Rehab is a must-have for any camper owner or dreamer.
