The American economy faces two deep problems: expanding innovation and raising the rate of quality job creation. Both have roots in a neglected problem: the resistance of Legacy economic sectors to innovation. While the U.S. has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology, most of its economy is locked into Legacy sectors defended by technological/ economic/ political/ social paradigms that block competition from disruptive innovations that could challenge their models. Americans like to build technology "covered wagons" and take them "out west" to open new innovation frontiers; we don't head our wagons "back east" to bring innovation to our Legacy sectors. By failing to do so, the economy misses a major opportunity for innovation, which is the bedrock of U.S. competitiveness and its standard of living.

Technological Innovation in Legacy Sectors uses a new, unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors: energy, air and auto transport, the electric power grid, buildings, manufacturing, agriculture, health care delivery and higher education, and develops approaches to understand and transform them. It finds both strengths and obstacles to innovation in the national innovation environments - a new concept that combines the innovation system and the broader innovation context - for a group of Asian and European economies.

Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process. By increasingly offshoring production, the U.S. is losing important parts of its innovation capacity. "Innovate here, produce here," where the U.S. took all the gains of its strong innovation system at every stage, is being replaced by "innovate here, produce there," which threatens to lead to "produce there, innovate there." To bring innovation to Legacy sectors, authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation. They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations. In the specific case of advanced manufacturing, the production ecosystem can be recreated to reverse "jobless innovation" and add manufacturing-led innovation to the U.S.'s still-strong, research-oriented innovation system.

The Vinyl LP in Midcentury America

Feeding My Mother

Brazilian Portuguese Phrase Book

How record albums and their covers delivered mood music, lifestyle advice, global sounds, and travel tips to midcentury Americans who longed to be modern. The sleek hi-fi console in a well-appointed midcentury American living room might have had a stack of albums by musicians like Frank Sinatra, Elvis Presley, or Patti Page. It was just as likely to have had a selection of LPs from slightly different genres, with such titles as Cocktail Time, Music for a Chinese Dinner at Home, The Perfect Background Music for Your Home Movies, Honeymoon in Hawaii, Strings for a Space Age, or Cairo! The Music of Modern Egypt. The brilliantly hued, full-color cover art might show an ideal listener, an ideal living room, an ideal tourist in an exotic landscape—or even an ideal space traveler. In *Designed for Hi-Fi Living*, Janet Borgerson and Jonathan Schroeder listen to and look at these vinyl LPs, scouring the cover art and the liner notes, and find that these albums offered a guide for aspirational Americans who yearned to be modern in postwar consumer culture. Borgerson and Schroeder examine the representations of modern life in a selection of midcentury record albums, discussing nearly 150 vintage album covers, reproduced in color—some featuring modern art or the work of famous designers and photographers. Offering a fascinating glimpse into the postwar imagination, the first part, "Home," explores how the American home entered the frontlines of cold war debates and became an entertainment zone—a place to play music, mix drinks, and impress guests with displays of good taste. The second part, "Away," considers albums featuring music, pictures, and tourist information that prepared Americans for the jet age as well as the space race.

This book offers an edited volume for all readers who wish to gain an in-depth grasp of the economic analysis of recent developments in energy law and policy in Europe and the United States. In response to waning resources and heightened environmental awareness, many countries are now seeking to redefine their energy mix. Several energy sources are available: coal and oil, natural gas, and a variety of renewables. Yet which of them are capable of addressing core energy-related concerns? Reliability, security, affordability, fairness, and sustainability all have to be taken into account. Further, once a target mix has been identified, two challenges remain for legal scholars: what role does the law play in achieving a specified energy mix, and, how can the law best fulfill that role? The essential energy concerns are just as important in defining the way we shape our energy mix as they are in defining the mix itself. An example of current challenges in energy law and policy can be seen in the pursuit by the German and Swiss governments of the so-called "Energiewende" (energy transition). These policies are intended to enable the transition from a non-sustainable use of fossil and nuclear energy to a more sustainable approach based on renewable energies. On the one hand, the goal is to achieve a decarbonization of the energy economy by reducing the use of fossil energy sources such as petroleum, carbon and natural gas. On the other, and in response to the Fukushima nuclear accident, a phase out is intended to eliminate the dangers of nuclear technologies. Achieving these goals poses tremendous challenges for the two countries' energy policies – partly because the energy transition will not only affect energy production, but also energy consumption. From a Law and Economics perspective, a number of questions arise: to what extent is it justifiable to rely on markets and continued technological innovation, especially with regard to the present exploitation of scarce resources? To what extent is it necessary for states to intervene in energy markets? Regulatory instruments are available to create and maintain more sustainable societies: command and control regulations, restraints, Pigovian taxes, emission certificates, nudging policies, and more. If regulation in a certain legal field is necessary, which policies and methods will most effectively spur the sustainable consumption and production of energy in order to protect the environment while mitigating any potential negative impacts on economic development? Do neoclassical and behavioural economics provide us with a suitable framework for predicting the market's complex reactions to a changing energy policy? This book provides theoretical insights as well as empirical findings in order to answer these vital questions.

#1 NATIONAL BESTSELLER Based on her hugely popular Facebook posts and Instagram photos, Feeding My Mother is a frank, funny, inspirational and piercingly honest account of the transformation in Jann Arden's life that has turned her into the primary "parent" to her mom, who is in the grip of Alzheimer's. Jann Arden moved in to a house just across the way from her parents in rural Alberta to be close to them but also so they could be her refuge from the demands of the music business and a performing career. Funny how time works. Since her dad died in 2015, Jann cooks for her mom five or six times a week. Her mom finds comfort in her daughter's kitchen, not just in the delicious food but also just sitting with her as she cooks. And Jann finds some peace in caring for her mom, even as her mom slowly becomes a stranger. "If you told me two years ago that I'd be here," Jann writes, "I wouldn't have believed it. And yet we still fall into so much laughter, feel so much insane gladness and joy. It's such a contrast from one minute to the next and it teaches me constantly: it makes me stronger and more humble and more empathetic and caring and kind." The many people who are dealing with a loved one who is losing it will find inspiration and strength in Jann's wholehearted, loving response and her totally Jann take on the upside-down world of a daughter mothering her mother. Feeding My Mother is one heck of an affirmation that life just keeps on keeping on, and a wonderful example of how you have to roll with it.

"Reservoir compartmentalization - the segregation of a petroleum accumulation into a number of individual fluid/pressure compartments - controls the volume of moveable oil or gas that might be connected to any given well drilled in a field, and consequently impacts 'booking' of reserves and operational profitability. This is a general feature of modern exploration and production portfolios, and has driven major developments in geoscience, engineering and related technology. Given that compartmentalization is a consequence of many factors, an integrated subsurface approach is required to better understand and predict compartmentalization behaviour, and to minimize the risk of it occurring unexpectedly. This volume reviews our current understanding and ability to model compartmentalization. It highlights the necessity for effective specialist discipline integration, and the value of learning from operational experience in: detection and monitoring of compartmentalization; stratigraphic and mixed-mode compartmentalization; and fault-dominated compartmentalization"--Page 4 of cover.

A penetrating account of how unchecked capital mobility is damaging international cooperation, polarizing the economic landscape, and ultimately reshaping the global order When it comes to the afflictions of the global economy, almost everyone—and especially Donald Trump—is quick to point the finger of blame at the state of international trade. But what about unconstrained capital flows? Unfettered capital has resulted in a string of financial and economic crises that have left our political systems strained and dialogue corroded. The once perceived benefits of openness have been cast to the wayside and the cracks in the global order can no longer be ignored. Paola Subacchi argues that international cooperation and interdependence have become crippled. Regional restrictions will soon strengthen and a multipolar order will take shape, leading to a distinctly transformed economic landscape in which China challenges the dominance of the US dollar. Combining history, analysis, and prediction, this book provides penetrating insight into the challenges facing the international economic order.

Most scholarship on corporate governance in the last two decades has focused on the relationships between shareholders and managers or directors. Neglected in this vast literature is the role of employees in corporate governance. Yet "human capital," embodied in the employees, is rapidly becoming the most important source of value for corporations, and outside the United States, employees often have a significant formal role in corporate governance. This volume turns the spotlight on the neglected role of employees by analyzing many of the formal and informal ways that employees are actually involved in the governance of corporations, in U.S. firms and in large corporations in Germany and Japan. Examining laws and contexts, the essays focus on the framework for understanding employees' role in the firm and the implications for corporate governance. They explore how and why the special legal institutions in German and Japanese firms by which employees are formally involved in corporate governance came into being, and the impact these institutions have on firms and on their ability to compete. They also consider theoretical and empirical questions about employee share ownership. The result of a conference at Columbia University, the volume includes essays by Theodor Baums, Margaret M. Blair, David Charny, Greg Dow, Bernd Frick, Ronald J. Gilson, Jeffrey N. Gordon, Nobuhiro Hiwatari, Katharina Pistor, Louis Putterman, Edward B. Rock, Mark J. Roe, and Michael L. Wachter. Margaret M. Blair is a senior fellow in Economic Studies at the Brookings Institution and author of *Ownership and Control: Rethinking Corporate Governance for the Twenty-first Century* (Brookings, 1995). Mark J. Roe, professor of

business regulation and director of the Sloan Project on Corporate Governance at Columbia Law School, is the author of *Strong Managers, Weak Owners: The Political Roots of American Corporate Finance* (Princeton, 1996).

A rigorous mathematical problem-solving framework for analyzing the Earth's energy resources *GeoEnergy* encompasses the range of energy technologies and sources that interact with the geological subsurface. Fossil fuel availability studies have historically lacked concise modeling, tending instead toward heuristics and overly-complex processes. *Mathematical GeoEnergy: Oil Discovery, Depletion and Renewal* details leading-edge research based on a mathematically-oriented approach to geoenergy analysis. Volume highlights include: Applies a formal mathematical framework to oil discovery, depletion, and analysis Employs first-order applied physics modeling, decreasing computational resource requirements Illustrates model interpolation and extrapolation to fill out missing or indeterminate data Covers both stochastic and deterministic mathematical processes for historical analysis and prediction Emphasizes the importance of up-to-date data, accessed through the companion website Demonstrates the advantages of mathematical modeling over conventional heuristic and empirical approaches Accurately analyzes the past and predicts the future of geoenergy depletion and renewal using models derived from observed production data Intuitive mathematical models and readily available algorithms make *Mathematical GeoEnergy: Oil Discovery, Depletion and Renewal* an insightful and invaluable resource for scientists and engineers using robust statistical and analytical tools applicable to oil discovery, reservoir sizing, dispersion, production models, reserve growth, and more.

ADP 3-19 Fires July 2019, defines and describes the fires warfighting function in terms of its major tasks, capabilities, functions, and processes, and describes the integration of capabilities and their associated effects through the targeting and operations processes. The successful employment of fires depends on the integration and synchronization of all elements of fires across domains and in concert with the other warfighting functions. This manual forms the foundation for training and Army education curricula on fires. The scope of this publication is broad in order to cover fires as a complete entity. It gives equal treatment to the diverse assets that contribute to the fires warfighting function. The term "fires" in this document includes lethal and nonlethal effects, as delivered by Army, joint, and multinational capabilities. To create effects in multi-domain operations, Army leaders must consider the fires warfighting function in an inclusive manner, integrating assets and effects...

Global growth appears to be stabilizing after a period of marked weakness, but it remains fragile. A modest recovery in emerging market and developing economies continues to be constrained by subdued investment, which is dampening prospects and impeding progress toward achieving critical development goals. Downside risks to the outlook remain elevated, and policymakers continue to face major challenges to boost resilience and foster long-term growth. this issue includes essays on the benefits and risks of government borrowing, recent investment weakness in emerging market and developing economies, the pass-through of currency depreciations to inflation, and the evolution of growth in low-income countries.
