Math story problems, some featuring facts about North Carolina.

There is a multiplicity of efforts to reform and restructure K-12 education. To date, however, reform efforts have yielded little significant change, in effect maintaining a status quo. Here, the authors urge the nation's citizenry to focus on the importance of education and to accept change as required to improve the overall learning of students.

If you already have a strong grasp on the Common Core and are eager to do something about it, this book's research-based strategies will help you respond to the demands of the new standards, particularly the English language arts standards that affect every subject area and grade level. Drawing from the research on which classroom strategies are your "best bets" for improving student achievement, the authors provide what you need to reinforce the Common Core in your lessons, including: a rationale for using each strategy to address the goals of the common core; research that supports the use of each strategy; steps for implementing each strategy in the classroom; sample lessons in multiple grade levels and subjects; and planning considerations to make certain your use of the strategy helps students become better at reading, understanding, using, and communicating rigorous texts. This practical book's teaching recommendations and sample lessons draw on six tips for inspired instruction that ensure your lessons capture students' interest, deepen their understanding, and extend their thinking about required course content. --Publisher description.

In 2006-07, seven Wake County Public School System (WCPSS) middle schools piloted Algebraic Thinking as an alternate approach to teaching middle school mathematics. Algebraic Thinking was developed to help students in grade 6 reach higher mathematics courses by combining the regular and advanced middle school mathematics courses into one heterogeneously grouped class and differentiating instruction. Of the 1,493 grade 6 students enrolled in one of the five pilot schools, 1,087 were still enrolled in Algebraic Thinking in 2008-09 and were therefore included in the study. A comparison cohort of 1,078 grade 6 students enrolled from 2006-07 to 2008-09 was selected from five matched schools. While both cohorts of students improved academically, overall findings suggest that participation in Algebraic Thinking did not have a greater positive impact on students' mathematics achievement as measured by EOG proficiency or growth. However, a significantly higher percentage of Algebra I students at the Algebraic Thinking schools met their Algebra I growth target. The following appendices are included: (1) Grade 9 Mathematics Courses Students Enrolled in 2006-07, 2007-08, and 2008-09 at Algebraic Thinking and Comparison Schools; (2) Percentage of Algebraic Thinking and Comparison Cohort Students Enrolled in Algebraic Thinking III, 8th Grade Math Plus, or 8th Grade Math by Grade 9 Mathematics Courses; and (3) Grade 9 Mathematics Courses Students Enrolled in 2006-07, 2007-08, and 2008-09 at Algebraic Thinking Schools.

This study investigates the impact of an after-school intervention on student achievement. The study uses two-tailed t tests to compare the growth in actual scale scores achieved by two groups of students taking the North Carolina End of Grade (EOG) test from 1999 to 2001. It compares the scores of those who participated in the Support Our Students (SOS) program to the scores of nonparticipating students to determine the effect that the SOS program had on student performance on the EOG test. To conduct the research, I obtained assistance from Edstar Research in compiling a complete list of all students participating in the SOS program who were in sixth grade in 1998-1999 and who scored a level I or level II on their math/language arts EOG. The identifiers included were county, ethnicity, socioeconomic status, gender, and EOG scores for math and language arts for each of the 1998--1999, 1999--2000, and 2000--2001 school years. With the assistance of the North Carolina Education Data Center, I obtained a data set representing the stratified group of students who were level I or level II who did not participate in the SOS program. This study's findings are as follows: 1. Students who participated in the Support Our Students program for three years in middle school from the years 1998 to 2001 showed no significant difference in math or reading scores from those who did not participate in the program. 2. There was no significant difference in math or reading scores between participating and nonparticipating students in the minority subgroup. 3. There was no significant difference in math or reading scores between participating and nonparticipating students in the free or reduced-price lunch subgroup. 4. There was no significant difference in math or reading scores between participating and nonparticipating students in the male subgroup. 5. There was no significant difference in math or reading scores between participating and nonparticipating students in t.

Visual displays play a crucial role in knowledge generation and communication. The purpose of the volume is to provide researchers with a framework that helps them use visual displays to organize and interpret data; and to communicate their findings in a comprehensible way within different research (e.g., quantitative, mixed methods) and testing traditions that improves the presentation and understanding of findings. Further, this book includes contributions from leading scholars in testing and quantitative, qualitative, and mixed methods research, and results reporting. The volume's focal question is: What are the best principles and practices for the use of visual displays in the research and testing process, which broadly includes the analysis, organization, interpretation, and communication of data? The volume is organized into four sections. Section I provides a rationale for this volume; namely, that including visual displays in research and testing can enhance comprehension and processing efficiency. Section II includes addresses theoretical frameworks and universal design principles for visual displays. Section III examines the use of visual displays in quantitative, qualitative, and mixed methods research. Section IV focuses on using visual displays to report testing and assessment data.
