The Truth about Testing

In my elementary classrooms, social studies has taken a back seat to English Language Arts and Mathematics in the wake of No Child Left Behind and Race to the Top. This volume is not another hand-wringing lament. On the contrary, the elementary educators who have contributed to this volume have a positive set of stories to tell about how social studies can play a central role in the elementary classroom, how teachers can integrate social studies knowledge and skills throughout the school day, and how this learning can carry over into children's homes and communities. The seven case studies in this book, one at each elementary grade level, highlight exemplary teachers in whose classrooms social studies is alive and well in this age of accountability. At the end of each case study, each teacher provides advice for elementary teachers of social studies. Our hope is that elementary teachers and prospective teachers, elementary principals, social studies supervisors, staff developers, and professors of elementary social studies methods who study the stories that we tell can be empowered to return social studies to its rightful place in the curriculum.

The purpose of this study was to determine if there were differences in standardized test scores, expressed as percentage passing, in math, reading-language arts, science, and social studies by comparing 6th grade students in K-8 schools with those in 6-8 schools. The data were gathered from an analysis of 6th grade students' scores on the 2006-2007 TMAP standardized assessment test in the state of Tennessee. The relationship between grade configuration (6-8 or K-8) and percent of 6th grade students scoring at the below proficient, proficient, or advanced level in each subject area was examined. The analysis was based on 5 research questions. A t-test for independent samples was used to identify the relationships between the independent variables, configuration of the school (K-8 or 6-8), and the dependent variables, the percent of students scoring below proficient, proficient, or advanced. A chi square analysis was used to identify the relationship between the proportion of K-8 schools meeting AYP versus the proportion of 6-8 schools meeting AYP. The study showed no relationship between grade configuration (6-8 or K-8) and percent of 6th grade students scoring at the below proficient level in math, reading-language arts, science, or social studies. There was not a significant difference between grade configuration (6-8 or K-8) and percent of 6th grade students scoring at the proficient level in math and reading-language arts and the advanced level in math, reading-language arts, and science. However, there was a significant relationship between grade configuration (6-8 or K-8) and percent of 6th grade students scoring at the below proficient level and the proficient level in science and the percent of 6th grade students scoring at the proficient level and advanced level in social studies. In science, a lower percentage of 6th grade students in K-8 schools scored below proficient than did 6th grade students in 6-8 schools. In science, a higher percentage of 6th g.

In this expansive book, David Narrett shows how the United States emerged as a successor empire to Great Britain through rivalry with Spain in the Mississippi Valley and Gulf Coast. As he traces currents of peace and war over four critical decades—from the close of the Seven Years War through the Louisiana Purchase—Narrett sheds new light on individual colonial adventurers and schemers who shaped history through cross-border trade, settlement projects involving slave and free labor, and military incursions aimed at Spanish and Indian territories. Narrett examines the clash of empires and nationalities from diverse perspectives. He weighs the challenges facing Native Americans along with the competition between Spanish, French, British, and U.S. interests. In a turbulent era, the Louisiana and Florida borderlands were shaken by tremors from the American Revolutionary War and the French Revolution. By demonstrating pervasive intrigue and subterfuge in borderland rivalries, Narrett shows that U.S. Manifest Destiny was not a linear or inevitable progression. He offers a fresh interpretation of how events in the Louisiana and Florida borderlands altered the North American balance of power, and affected the history of the Atlantic world. Frequently cited as a land that birthed civilization and culture as we know it, the impact of ancient Greece on the world cannot be overstated. Its flourishing city-states laid the creative foundations for much of the literature, drama, art, and architecture we enjoy today, while advances in governance and law have shaped the development of democracy. This lively volume chronicles the major events and achievements of this dynamic society and profiles some of its most notable figures. Numerous maps, illustrations, and sidebars transport the reader to the ancient, awe-inspiring past of the Hellenic Republic.

This workbook is designed for students sitting the Grade Level Assessment Test (GLAT) in 6th Grade. The book provides past questions from previous years and focuses on Social Studies concepts at the primary school level. The Social Studies examination is based on content from the 'Primary Social Studies and Tourism Education for The Bahamas', books 4, 5 and 6.The G.L.A.T. Social Studies Practice Test Workbook is a must have resource for students in 6th grade who are preparing to sit the Grade Level Assessment Test.

This study proposed to evaluate current practices for ability placement of pupils entering seventh grade English, social studies, and arithmetic classes in a selected junior high school of the Santa Monica (California) Unified School District. Hypotheses to be tested were: (1) The effectiveness of placement practices at the seventh grade level can be predicted in one junior high school. (2) A given formula for predicting success of placement practices at the seventh grade level in one junior high school, when supplemented by substantiating evidence from recognized authorities in this area of investigation, can be used as an approach to general evaluative procedures in other junior high schools. The statistical analysis for Hypothesis (1) employed the method of multiple regression. Sixth grade test scores in I.Q., reading, and arithmetic were correlated with the grades earned by 537 pupils in seventh grade English, social studies, and arithmetic—the three basic subjects required in the selected school. School years examined were 1960-61 and 1961-62. The three basic subjects were established as dependent variables; the test scores and marks in each of the basic subjects during sixth grade, as independent variables. It was found that sixth grade marks in social studies and arithmetic are most useful in predicting the three dependent variable, but that I.Q., reading comprehension, and arithmetic problem-solving also contribute significantly to an over-all predictive formula. Hypothesis (1) was accepted on the basis of the findings, although each standard error of the above-named independent variables was greater than half a grade point indicating a substantial error for the most effective ability grouping. Hypothesis (2) was rejected for lack of further outside information to substantiate any inference drawn from the statistical findings. Certain criteria taken from the literature were, however, found to be operative in the selected junior high school: 1. The ability grouping program is grounded upon a basic philosophy of education and governed by definite policies on grading and promotions. 2. Provisions for modification of the curriculum and of instructional methods and materials, as well as for program flexibility and evaluation, are consonant with best practices. One conclusion, reached independently from observation of current practices, was that administering standardized tests at the sixth grade level for the sectioning of seventh grade pupils does not permit the correlation of seventh grade scores with seventh grade marks. Conclusions from the statistical analysis were: 1. I.Q., reading comprehension, and arithmetic problem-solving are significant for predicting successful seventh grade placement when combined in a multiple regression analysis. 2. Predicting successful placement in seventh grade English, social studies, and arithmetic groups from marks made in sixth grade social studies and arithmetic provide lower standard errors of estimate than do predictions from the I.Q., reading comprehension, and arithmetic problem-solving scores. There is therefore a positive significant relationship between marks made in sixth grade social studies and arithmetic and the English-social-studies-arithmetic marks in seventh grade. It is recommended: 1. That junior high school administrators and/or counselors familiarize themselves with the curriculum and grading policies of feeder elementary schools so that there will be better vertical articulation between both levels of education. 2. That standardized tests be given at the end of the sixth grade so that scores may have greater validity in relation to seventh grade ability grouping. 3. That marks made in sixth grade social studies and arith metric be considered when grouping pupils in seventh grade English, social studies, and arithmetic classes.

Organized around four commonplaces of education—learners and learning, subject matter, teachers and teaching, and classroom environment—Elementary Social Studies provides a rich and ambitious framework to help social studies teachers achieve powerful teaching and learning results. By blending the theoretical and the practical, the authors deeply probe the basic elements of quality instruction—planning, implementation, and assessment—always with the goal of creating and supporting students who are motivated, engaged, and thoughtful. Book features and updates to the third edition include: • New chapter on classroom assessment that outlines and compares existing assessment strategies, contextualizes them within the framework of state standards, and articulates a constructivist approach that moves away from traditional high-stakes testing to more meaningful ways of evaluating student learning • New chapter that highlights and explains key elements of the Common Core State Standards for English Language Arts, and shows how the incorporation of critical EIA instruction into the social studies curriculum can foster more ambitious teaching and learning • Real-classroom narratives that introduce each chapter and provide in-depth access to teaching and learning contexts • Practical curriculum and resource suggestions for the social studies classroom • End-of-chapter summaries and annotated teaching resources

In this instant New York Times bestseller, Angela Duckworth shows anyone striving to succeed that the secret to outstanding achievement is not talent, but a special blend of passion and persistence she calls "grit." "Inspiration for non-geniuses everywhere" (People). The daughter of a scientist who frequently noted her lack of "genius," Angela Duckworth is now a celebrated researcher and professor. It was her early eye-opening stints in teaching, business consulting, and neuroscience that led to her hypothesis about what really drives success: not genius, but a unique combination of passion and long-term perseverance. In Grit, she takes us into the field to visit cadets struggling through their first days at West Point, teachers working in some of the toughest schools, and young finalists in the National Spelling Bee. She also mines fascinating insights from history and shows what can be gleaned from modern experiments in peak performance. Finally, she shares what she's learned from interviewing dozens of high achievers—from JP Morgan CEO Jamie Dimon to New Yorker cartoon editor Bob Mankoff to Seattle Seahawks coach Pete Carroll. "Duckworth's ideas about the cultivation of tenacity have clearly changed some lives for the better" (The New York Times Book Review). Among Grit's most valuable insights: any effort you make ultimately counts twice toward your goal; grit can be learned, regardless of IQ or circumstances; when it comes to child-rearing, neither a warm embrace nor high standards will work by themselves; how to trigger lifelong interest; the magic of the Hard Thing Rule; and so much more. Winningly personal, insightful, and even life-changing, Grit is a book about what goes through your head when you fall down, and how that—not talent or luck—makes all the difference.

This is "a fascinating tour of the psychological research on success" (The Wall Street Journal). Traditions & Encounters offers an inclusive vision of the global past—one that is meaningful and appropriate for the interdependent world of contemporary times. Given the diversity of human societies, gathering and organizing the sheer mass of information in a meaningful way is a daunting challenge for any world history survey course. The seven-part chronological organization enables students to understand the development of the world through time, while also exploring broader, big-picture thematic issues in world history. Through new and revised chapter-level and part-level features, the hallmark twin themes of traditions and encounters emerge in greater clarity than ever before in this sixth edition. As a result, students have resources that enable them to move beyond the facts of history and examine the past critically, analyze causes and effects, and recognize similarities and differences across the world's regions. By delving more deeply into the implications of world history's stories—not just the who, the what, and the where, but also the why and the how—students can make sense of the human past. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that your class time is more engaging and effective.

The purpose of this study was to determine the effect of the ALR strategy on student learning in 6th grade social studies. The study was a quasi experimental design for a duration of nine weeks. Three data sources were used to determine the effect of the ALR strategy: 1) pre- and post-tests, 2.) section quizzes, and 3.) student satisfaction surveys. Findings of the study included and increase in student retention of content an increase in student satisfaction. The percentage of increase on the chapter pre-test to post-test score was 13.2% for the treatment group in relation to the comparison group growth of 10%. The final results of the student satisfaction survey indicated higher scores for the treatment group in relation to the comparison group. Further research is needed to generalize the impact of this study.

This test prep is good for kids who are on the fence and having trouble passing, or need to increase their margin. These kids will often say "I DON'T KNOW WHERE TO START" when explaining their confusion.This book address that problem with three approaches.1) In contrast with the other study guides that use random questions in their practice exams; this book collated the questions into chapters based on the logic to solve them. The 6th grade book is divided into eight chapters. They are Logic, Arithmetic, Geometry, Fractions, Reading Graphs and tables, Measurements including a ruler, basic statistics, and order of operations.This book teaches basics then goes into practice exams with word problems. Once the student is proficient with the questions organized into chapters then they are ready for random questions.2) This study guide has thousands of practice problems. I have placed over 3100 videos on YouTube showing you how to work the problems3) I reviewed several years of past exams and placed enfaces on the easiest and most common questions. Mastering these questions should yield a 75% to 80%. If a student is already achieving this percentage; the other guides or web site with random questions and covering all material might be best.A book might be better for your student than the web sites for two reasons. 1) The more common and easiest questions are using a ruler to measure. The web designers don't know the size of your computer screen and can't determine if the student has measured correctly. We can get a high percentage of these problems easily.2) When studying on a computer there are too many websites with the answers. With a book; parents can have greater assurance the work is being done. This book is developed by a trained professional out of concern. It is not the product of a large publishing house. It is the results of one person who wants to help.Best RegardsMark Shannon Modern Classroom Assessment offers an applied, student-centered guide to the major research-based approaches to assessment in today's modern classroom. Rather than simply list basic assessment formats with a few examples, as many textbooks do, award-winning professor and scholar Bruce Frey's book fully explores all five key approaches for teacher-designed assessment—Traditional Paper-and-Pencil, Performance-Based Assessment, Formative Assessment, Universal Test Design, and Authentic Assessment—while making abstract concepts and guidelines clear with hundreds of real-world illustrations and examples of what actual teachers do. Offering a variety of engaging learning tools and realistic stories from the classroom, this text will give any reader a strong foundation for designing modern assessments in their own classrooms.

The purpose of this study was to determine the readability of three series of selected fourth, fifth and sixth grade social studies textbooks, a total of nine textbooks. Two measurements were utilized: a readability formula (Fry Readability Graph; Knapp, 1971), and group informal reading inventories. The Fry Graph was applied to ten randomly selected 100-word passages in each text; proper nouns were included in the computations. The group informal reading inventories were constructed from the same textbooks on passages not previously taught. The tests were administered in May to 1467 students in 78 randomly selected classrooms. Procedures Both descriptive and inferential statistics were used to analyze the data. Readability levels derived by the application of the Fry Graph were reported for each text.; as was the range of readability within each text and the deviation of each sample from the overall readability of the textbook. The test scores from the group informal reading inventories were first reported in terms of the per cent of subjects scoring at the independent level (90, 95, 100 per cent), the instructional level (65, 70, 75, 80, 85 per cent) and the frustration level (60 per cent or lower) for the sample. Mean test scores were also computed for the sample, the urban and rural subsets, for each grade level, and for each publisher. To determine if there were significant differences among the subsets, the following null hypotheses were formulated: H1 There are no significant differences in the mean scores of the urban and rural subjects. H2 There are no significant differences in the mean scores of the subjects in grades four, five and six. H3 There are no significant differences among the mean scores of the subjects tested on the D.C. Heath, the Silver Burdett or the Benefic Press social studies series. The differences among groups were statistically analyzed at the .05 and .01 levels of significance by the pooled variance t-test or by the analysis of variance. When the analysis of variance resulted in a significant F value, the multiple range test was applied to determine the exact location of the mean difference. Findings of the Study Fry Readability Graph 1. Two textbooks, the fourth grade textbooks published by D.C. Heath and by Silver Burdett, had readability levels in agreement with the publishers' designated grade level. The remaining seven textbooks had readability levels one to four years above the designated grade level. 2. The average range of readability within the textbooks was 6.2 years with little evidence of a gradation from less difficult to more difficult reading material. 3. When the three series were ranked according to their relative difficulty on the basis of the Fry readability levels, it was determined that: a. The D.C. Heath series is the least difficult. b. The Silver Burdett series occupies an intermediate position. c. The Benefic Press series is the most difficult. Group Informal Reading Inventories 1. For the total sample 9.41 per cent of the subjects scored at the independent level, 32.04 per cent scored at the instructional level, and 58.55 per cent scored at the frustration level. The mean test score was 54.82 per cent. 2. The mean score (56.64 per cent) of the urban subjects was significantly higher (.01 level) than the mean score (52.35 per cent) of the rural subjects with a t value of 3.30. H1 was rejected. 3. The mean score for grade four was 50.35 per cent; for grade five, 53.96 per cent; and for grade six, 58.09 per cent. The analysis of variance resulted in a significant (.01 level) F value of 11.25. H2 was rejected. 4. The mean scores by publisher were: D.C. Heath, 55.88 per cent; Silver Burdett, 55.77 per cent; and Benefic Press, 50.38 per cent. The analysis of variance resulted in a significant (.01 level) F value of 5.47. The multiple range test showed significant differences between the Benefic Press and D.C. Heath series (.01 level) and between the Benefic Press and Silver Burdett series (.01 level). There were no significant differences between the D.C. Heath and Silver Burdett series. H3 was rejected. Implications 1. The findings of this study did not differ in any substantial way from the results reported by earlier investigators. Further studies of the readability of social studies textbooks similar in content to the three series analyzed in this investigation is not warranted. 2. Additional research is needed to determine if systematic instruction resembling the procedures prescribed for a well-developed basal reading lesson will significantly affect the ability of students to comprehend social

studies textbooks. Recommendations 1. Current knowledge regarding the nature of concept development should be a major consideration for curriculum decisions in the social studies. Piaget's findings regarding the cognitive functioning of elementary school students provide insight regarding the capabilities of this age group. 2. Instructional alternatives that diminish heavy reliance on the textbook should be afforded a fair trial in the classroom, e.g., simulation and gaming (Cuetzkow, 1962; Inbar, 1972), process analog (Fielder, 1967; Joyce, 1972), role playing (Shaftel, 1967), problem solving (Fenton, 1967; Shaftel, 1967), inquiry approaches (Suchman, 1964; Clements, Fielder, Tabachnick, 1966), and inductive development of concepts and generalizations (Taba, 1966; Fenton, 1966; Hanna, 1965). 3. A publicly financed agency staffed by expert analysts and equipped with the necessary resources should be established to provide analysis services to publishers and to determine the difficulty level of all instructional materials as they appear on the market (Bormuth, 1971). 4. Pilot editions of all new textbooks should be field tested with a cross section of students using procedures similar to those utilized by the publishers of standardized tests. 5. When classroom teachers make reading assignments in social studies textbooks, they should faithfully adhere to the same procedures that are prescribed for a well-developed basal reading lesson.

The field of social studies is unique and complex.
