"Highly recommended for educators, parents, and moderate feminists who seek inspiration from one of the most accomplished women of this or any other age."—Publishers Weekly The definitive biography of Maria Montessori—physician, feminist, social reformer, educator, and one of the most admired, influential, and controversial women of the twentieth century. Maria Montessori effected a worldwide revolution in the classroom. She developed a new method of educating the young and inspired a movement that carried it into every corner of the world. This is the story of the woman behind the public figure—her accomplishments, her ideas, and her passions. Montessori broke the mold imposed on women in the nineteenth century and forged a new one, first for herself and eventually for those who came after her. Against formidable odds she became the first woman to graduate from the medical school of the University of Rome and then devoted herself to the condition of children considered uneducable at the time. She developed a teaching method that enabled them to do as well as normal children, a method which then led her to found a new kind of school—the Casa dei Bambini, or House of Children—which gained her worldwide fame and still pervades classrooms wherever young children learn. This biography is not only the story of a groundbreaking feminist but a vital chapter in the history of education.

The Montessori Method represents an explicit idealism and turn away from war and violence toward peace and reconstruction. It is built on coherent visions of how to improve human society by helping children realize their full potential as intelligent, creative, whole persons. In the Montessori Method, children are viewed as active authors of their own development, strongly influenced by natural, dynamic, self-righting forces within themselves, opening the way toward growth and learning. Teachers depend for their work with children on carefully prepared, aesthetically pleasing environments that serve as a pedagogical tool and provide strong messages about the curriculum and about respect for children. Partnering with parents is highly valued in the Montessori Method, and children are evaluated by means other than traditional tests and grades.

The Science Behind the Genius

One hundred and ten years ago, Maria Montessori, the first female physician in Italy, devised a very different method of educating children, based on her observations of how they naturally learn. In Montessori, Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori. Lillard presents the research behind nine insights that are foundations of Montessori education, describing how each of these insights is applied in the Montessori classroom. In reading this book, parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and, more importantly, why it happens and why it works. Lillard explains the scientific basis for Montessori's system and the distinctions between practices in traditional, "Montessomething," and authentic Montessori education. Furthermore, in this new edition, she

presents recent studies showing evidence that this alternative to traditional schooling does indeed make a difference. Montessori is indispensable reading for anyone interested in teaching, training, or considering Montessori schooling, in developmental psychology, or in understanding about human learning and education overall.

This book is intended to follow Education for a New World and to help teachers to envisage the child's needs after the age of six. We claim that the average boy or girl of twelve years who has been educated till then at one of our schools knows at least as much as the finished High School product of several years' seniority, and the achievement has been at no cost of pain or distortion to body or mind. Rather are our pupils equipped in their whole being for the adventure of life, accustomed to the free exercise of will and judgment, illuminated by imagination and enthusiasm. Only such pupils can exercise rightly the duties of citizens in a civilised commonwealth. The first four chapters are mainly psychological, showing the changed personality with which the teacher has to deal at six years of age, and the need for a corresponding change of approach. The secret of success is found to lie in the right use of imagination in awakening interest, and the stimulation of seeds of interest already sown by attractive literary and pictorial material, but all correlated to a central idea, of greatly ennobling inspiration—the Cosmic Plan, in which all, consciously or unconsciously, serve the great Purpose of Life. It is shown how the conception of evolution has been modified of late through geological and biological discoveries, so that self-perfection now has to yield precedence to service among the primary natural urges. The next eight chapters show how the Cosmic Plan can be presented to the child, as a thrilling tale of the earth we live in, its many changes through slow ages when water was Nature's chief toiler for accomplishment of her purposes, how land and sea fought for supremacy, and how equilibrium of elements was achieved, that Life might appear on the stage to play its part in the great drama. Illustrated as it must be by fascinating, charts and diagrams, the creation of earth as we now know it unfolds before the child's imagination, and always with emphasis on the function each agent has to perform in Nature's household, whether consciously or unconsciously, failure in this alone leading to extinction. So the tale proceeds till Palaeolithic Man appears, most significantly traced by the tools he used on his environment rather than by physical remains of so slight a creature. The new element of mind is brought to creation by man, and from that time the children are helped to see the great acceleration that has taken place in evolution. They learn to reverence the earliest pioneers, who toiled for purposes unknown to them but now to be recognised. Nomadic men and settlers alike contributed to build up early communities, and by interchanges of war and peace to share and spread social amenities. From chapter thirteen brief descriptions are given of some of the earliest civilizations, particularly with a view to their impacts on each other, showing human society as slowly organising itself towards unity, just as, in the

individual human being, organs are built around separate centres of interest, to be later connected by the blood-circulatory system and the nerves, into an integrated human organism. So the child is led, by review of some of the most thrilling epochs of world-history, to see that so far humanity has been in an embryonic stage, and that it is just now emerging into true birth, able to consciously realise its true unity and function. The last chapters go back to the psychological point of view, urging on educators the supreme importance, to the nation and to the world, of the tasks imposed on them. Not in the service of any political or social creed should the teacher work, but in the service of the complete human being, able to exercise in freedom a self-disciplined will and judgment, unperverted by prejudice and undistorted by fear.

Questo volume presenta le principali vicende che hanno contrassegnato la vita delle scuole italiane, statali e private, in Etiopia e della collettività italiana residente, dal secondo dopoguerra fino alla soglia degli anni Duemila. Quindici anni dopo la fine della lacerante occupazione dell'Etiopia, l'apertura di scuole italiane nel Paese rappresenta un importante tentativo di costruire strutture educative e culturali, aperte anche ai giovani etiopici, aventi la finalità di favorire una emancipazione sociale e culturale degli italiani residenti e dei tanti ragazzi frutto dell'unione di italiani con donne etiopiche. La vicenda narrata è articolata e complessa in ragione del particolare contesto sociale in cui si svolge, della rilevante influenza che su di essa hanno le relazioni politico diplomatiche tra i due paesi, dell'alternarsi di ben tre regimi politici nell'arco di pochi decenni: ordinamento statale imperiale fino al 1974, ordinamento di tipo comunista fino al 1991,

Graphic novel in manga. Angela Davis was a teenager when she began to ask herself questions. At the time, she lived in the Dynamite Hill neighborhood of Birmingham, Alabama, where the KuKluxKlan placed bombs in front of the houses of black families to force them to leave their homes. This book brings us closer to the life of one of the icons of feminism and one of the most emblematic figures in the fight against racism and in favor of equality in the United States. It focuses especially on the political activism of Angela Davis during the 1960s in Los Angeles.

Spesso i bambini con disturbi dello spettro autistico, in particolare i soggetti Asperger, mostrano un repertorio limitato di azioni e gesti per esprimere il proprio affetto e una generale carenza di empatia. È facile, ad esempio, che faticino a riconoscere le convenzioni sociali riguardanti l'affettività, che si irrigidiscano per atteggiamenti troppo espansivi o, al contrario, che manifestino eccessive richieste d'affetto. Questo volume, scritto da due psicologi clinici con un'esperienza decennale nei disturbi dello spettro autistico, presenta un programma rivolto a insegnanti, psicologi e terapisti, finalizzato ad aiutare questi bambini e ragazzi a migliorare le proprie manifestazioni emotive e, di conseguenza, la qualità delle loro relazioni. Chiaro e semplice da attuare, il programma è articolato in 5 sessioni distinte, ognuna delle quali è dedicata a uno specifico argomento/abilità:

- Sessione 1 – Analizzare i sentimenti di affetto
- Sessione 2 – Riconoscere ed esprimere l'affetto
- Sessione 3 – Fare e ricevere complimenti
- Sessione 4 – Comprendere le ragioni per le quali esprimiamo apprezzamento o amore con parole e gesti di affetto
- Sessione 5 – Sviluppare la capacità di esprimere affetto.

Pensato per bambini e adolescenti, il programma può essere svolto con singoli o piccoli gruppi e consta di attività semplici da eseguire, anche per chi non abbia una specifica formazione nel settore. Già sottoposto a sperimentazione, esso ha dimostrato importanti risultati positivi, sia in termini di miglioramento della gamma di espressioni emotive che della loro modulazione e appropriatezza in relazione al contesto.
