This classic, coauthored by New York Times columnist and pediatrician Dr. Perri Klass, has been fully revised and updated to reflect the recent significant changes in the recognition and care of children whose development doesn't go as expected. It includes new information about therapeutic interventions, managing co-morbidities, and getting support for children with developmental differences at school. Additional information covers community resources, initiatives at hospitals, clinics, and even theme parks, that make life easier for children with developmental differences and their families. The authors also offer a stronger focus on self-care for parents in this new edition, with the pediatrician's perspective of supporting families as they go through the diagnostic process over time.

Readers are walked through strategies by a therapist and her former patient. 8 Keys to Recovery from an Eating Disorder was lauded as a "brave and hopeful book" as well as "remarkably readable." Now, the authors have returned with a companion workbook--offering all new assignments, strategies, and personal reflections to help those who suffer from an eating disorder heal their relationship to food and their bodies. Clients of Costin and Grabb consistently tell them that knowing they are both recovered is one of the most helpful aspects of their treatment. With this experience as a foundation, the authors bring together years of clinical expertise and invaluable personal testimony, from themselves and others, to the strategies in this book. Readers will get a glimpse of what it's like to be in therapy with either Carolyn or Gwen. Filled with tried and true practical exercises, goal sheets, food journal forms, clinical anecdotes and stories, readers are guided in exploring their thoughts, feelings, and coping strategies while being encouraged to choose how they want to approach the material. This book is an important resource to anyone living with destructive or self-defeating eating behaviors.

Decades of research have demonstrated that the parent-child dyad and the environment of the family--which includes all primary caregivers--are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

'A practical guide by the man Time magazine has called "the forgiveness trailblazer." While it may seem like a simple enough act, forgiveness is a difficult, delicate process which, if executed correctly, can be profoundly moving and a deep learning experience. Whatever the scenario may be--whether you need to make peace with a certain situation, with a loved one or friend, or with a total stranger--the process of forgiveness is an art and a science, and this hands-on guide walks readers through it in 8 key steps. How can we become forgivingly "fit"? How can we identify the source of our pain and inner turmoil? How can we find meaning in what we have suffered, or learn to forgive ourselves? What should we do when forgiveness feels like a particularly tall order? All these questions and more are answered in this practical book, leading us to become more tolerant, compassionate, and hopeful human beings.

The New York Times bestselling, groundbreaking manifesto on the critical school years when parents must learn to allow their children to experience the disappointment and frustration that occur from life's inevitable problems so that they can grow up to be successful, resilient, and self-reliant adults Modern parenting is defined by an unprecedented level of overprotectiveness: parents who rush to school at the whim of a phone call to deliver forgotten assignments, who challenge teachers on report card disappointments, mastermind children's friendships, and interfere on the playing field. As teacher and writer Jessica Lahey explains, even though these parents see themselves as being highly responsive to their children's well being, they aren't giving them the chance to experience failure--or the opportunity to learn to solve their own problems. Overparenting has the potential to ruin a child's confidence and undermine their education, Lahey reminds us. Teachers don't just teach reading, writing, and arithmetic. They teach responsibility, organization, manners, restraint, and foresight--important life skills children carry with them long after they leave the classroom. Providing a path toward solutions, Lahey lays out a blueprint with targeted advice for handling homework, report cards, social dynamics, and sports. Most importantly, she sets forth a plan to help parents learn to step back and embrace their children's failures. Hard-hitting yet warm and wise, The Gift of Failure is essential reading for parents, educators, and psychologists nationwide who want to help children succeed.

Raising secure and confident kids using best parenting practices from the past. Does it ever seem to you like kids these days are in control of their parents? Having a strong sense of yourself as a parent is key to raising a resilient, independent, thoughtful, and solution-focused child. But over the last several generations, parents have been immersed in the well-intentioned idea that parenting should be child-centered rather than adult-centered. Many parents have begun to follow their children's lead rather than insist that children adapt to parental prerogatives. Parental authority has come to be seen as a bad thing. The 8 keys presented in this book focus on valuing your own authority as a parent; cultivating your child's character; applying discipline instead of punishment; strategies to motivate compliance; fostering emotional development; problem-solving; conflict management; and effective communication. They will help parents raise self-directed children who are active learners, feel good about themselves, take initiative, and have a strong moral compass.

The Book of Questions for New Parents is a collection of 300 questions and scenarios that will challenge you to explore yourself and your loved one as new parents of young children.

"Me and E: A Baseball Odyssey is a reflection on parenting a highly skilled, nationally-ranked and difficult baseball prodigy, told through the author's eyes as he witnessed and participated in the successes and failures of his son playing baseball and growing up in a changing world of competitive youth sports, over-involved parents, fanatical coaches, the hypocrisies inherent in high school athletics, the college recruiting process and how we teach our kids to grow up and become decent human beings - despite ourselves as local sports icons with traits and characteristics that everyone will recognize. It's a book about flawed parenting, about living vicariously through a gifted child and learning, finally, that being a good father is as much about letting go as it is about being involved. Temper tantrums in the supermarket. Tears that seem to come out of nowhere. Battles over homework that are more like wars. When your child has problems regulating his or her emotions, there's no hiding it. Children with intense emotions go from 0 to 100 emotional and behavioral outbursts that leave parents feeling bewildered and helpless. Other parents may have told you that it's just a phase or that your child needs discipline. In reality, your child may have emotion dysregulation, a tendency to react intensely. Parenting a Child Who Has Intense Emotions is an effective guide to de-escalating your child's emotions and helping your child express feelings in productive ways. You'll learn strategies drawn from dialectical behavior therapy (DBT), including mindfulness and how your child's emotions spin out of control. This well-researched method for managing emotions can help your child make dramatic emotional and behavioral changes that both of you will be proud of.

"From his decades of research and work with thousands of families, leading authority Russell A. Barkley knows how overwhelming the everyday challenges of ADHD can be. This unique book guides parents to help their child or teen thrive and keep their loving connection strong, even in hot-button situations. Dr. Barkley presents 12 key parenting principles that address the most common problems that ADHD poses, such as family conflicts, difficult behavior, school problems, out-of-control emotions, and parental stress. He shows how cultivating a mindset of acceptance and compassion--together with an understanding of the executive function deficits of ADHD--gives parents powerful new tools for supporting their child's success. Concise, inspiring, and filled with quick-reference lists and tips, this is the perfect book for parents to read cover to cover or pick up any time they need extra support"--Offers techniques for helping chronically inflexible children, shows how brain-based deficits contribute to these problems, and suggests ways to calm things down.

With decades of experience working with ADD children, Dr. Edward Hallowell has long argued that ADD is too often misunderstood, mistreated, and mislabeled as a "disability." Now he teams up with top academic ADD researcher Peter S. Jensen, M.D., to bring you an invaluable new approach to helping your ADD child. Superparenting for ADD offers a specific game plan including • UNCONDITIONAL LOVE Tune out the diagnosticians and simply nourish the spirit of your child for who he is. • VIEWING THE MIRROR TRAITS Recognize the positive sides of the negative symptoms associated with ADD: stubbornness = persistence; impulsiveness = creativity; intrusiveness = eagerness. • THE CYCLE OF EXCELLENCE Nurture an environment in which a child can safely take risks, reserve time to let a child dabble as a way to learn, encourage playful practice, support mastery of a skill, and then recognize a child's accomplishments.

Depression is a widespread condition affecting approximately 7.5 million parents in the U.S. each year and may be putting at least 15 million children at risk for adverse health outcomes. Based on evidentiary studies, major depression in either parent can interfere with parenting quality and increase the risk of children developing mental, behavioral and social problems. Depression in Parents, Parenting, and Children highlights disparities in the prevalence, identification, treatment, and prevention of parental depression among different sociodemographic populations. It also outlines strategies for effective intervention and identifies the need for a more interdisciplinary approach that takes biological, psychological, behavioral, interpersonal, and social contexts into consideration. A major challenge to the effective management of parental depression is developing a treatment and prevention strategy that can be introduced within a two-generation framework, conducive for parents and their children. Thus far, both the federal and state response to the problem has been fragmented, poorly funded, and lacking proper oversight. This study examines options for widespread implementation of best practices as well as strategies that can be effective in diverse service settings for diverse populations of children and their families. The delivery of adequate screening and successful detection and treatment of a depressive illness and prevention of its effects on parenting and the health of children is a formidable challenge to modern health care systems. This study offers seven solid recommendations designed to increase awareness about and remove barriers to care for both the depressed adult and prevention of effects in the child. The report will be of particular interest to federal health officers, mental and behavioral health providers in diverse parts of health care delivery systems, health policy staff, state legislators, and the general public.

Dr Justin Coulson, resident parenting expert on Channel 9's Parental Guidance, draws on positive psychology to gives parents ways to make their family happier than ever, starting today! 'Parenthood can be a jungle, but Justin's advice and simple strategies will help you find that path back to sanity, stability and smiling kids.' - Lisa Wilkinson Everyone wants their family to be happy, but so much gets in the way - work stress, commitments and our children's challenging behaviour are some of the usual suspects. Less obvious obstacles are our own habits and expectations, a reactive parenting style, and even a lack of clarity about what makes a family truly happy. As a result, families often seem fragmented, stressed and out of control. Kidspot parenting expert Justin Coulson knows how to make families happier. In this book, he combines cutting-edge insights from positive psychology with classic psychological research to help parents identify and develop habits that will strengthen their family. In his trademark warm and empathic style Justin covers topics like finding the most effective parenting style for your child, getting relationships right and how that leads to effective discipline, using mindfulness in parenting, being emotionally available to your children - and so much more. 'Toward a Global 'Thin' Community re-examines aspects of the liberal-communitarian debate. While critical of both traditions, this book argues that a coherent form of communitarianism is the only plausible option for citizens today. Using the theories of Friedrich Nietzsche and Michel Foucault, Olssen shows how we can overcome traditional problems with communitarianism by using an ethic of survival that he identifies in the writings of Nietzsche and others to provide a normative framework for twenty-first century politics at both national and global levels. 'Thin' communitarianism seeks to surmount traditional objections associated with Hegel and Marx, and to safeguard liberty and difference by applying a robust idea of democracy.'

Challenging the notion that clients with PTSD must revisit, review, and process their memories to recover from trauma. The Body Remembers, Volume 2: Revolutionizing Trauma Treatment continues the discussion begun more than fifteen years ago with the publication of the best-selling and beloved The Body Remembers: The Psychophysiology of Trauma and Trauma Treatment. This new book is grounded in the belief that the most important goal for any trauma treatment is to improve the quality of life of the client. Therefore, the first prerequisite is that the client be reliably stable and feel safe in his or her daily life as well as the therapy situation. To accomplish this, Babette Rothschild empowers both therapists and clients by expanding trauma treatment options. For clients who prefer not to review memories, or are unable to do so safely, new and expanded strategies and principles for trauma recovery are presented. And for those who wish to avail themselves of more typical trauma memory work, tools to make trauma memory resolution even safer are included. Being able to monitor and modulate a trauma client's dysregulated nervous system is one of the practitioner's best lines of defense against traumatic hyperarousal going amok—risking such consequences as dissociation and decompensation. Rothschild clarifies and simplifies autonomic nervous system (ANS) understanding and observation with her creation of an original full color table that distinguishes six levels of arousal. Included in this table (and the discussion that accompanies it) is a new and essential distinction between trauma-induced hypoarousal and the low arousal that is caused by lethargy or depression. The full color ANS table is also available from W.W. Norton as a laminated desk reference and a wall poster suitable for framing so this valuable therapeutic tool will always be at hand. Principles and theory come alive through multiple demonstration therapy transcripts that illustrate: Stabilizing a new client who consistently dissociates due to persistent trauma flashbacks Clarifying and keeping therapeutic contracts Identifying and implementing hidden somatic resources for stabilization Easing transition from Phase 1 to Phase 2 trauma treatment via trauma memory outlining Utilizing good memories and somatic markers as antidotes to traumatic memory Combining an authoritative yet personal voice, Rothschild gives clinicians the space to recognize where they may have made mistakes—by sharing her own!—as well as a road map toward more effective practice in the future. This book is absolutely essential reading for anyone working with those who have experienced trauma.

Tips and strategies for parents of kids who are “different” than all the rest. A quirky child experiences difficulty fitting in and connecting with others usually due to an interpersonal style or behavior that stands out from the other kids. Maybe they are obsessed with a topic of interest or spend excessive hours a day reading, playing video games, or playing with just one toy. These kids are not so far afield as to fall on the autism spectrum, but they are unique, and their behaviors are not addressed in typical parenting books. This book defines quirky markers and offers strategies for parents to understand their children's brains and behaviors; to know what is developmentally appropriate, and what isn't; to understand how to reach their kids; and to help facilitate their social functioning in the world. It will calm the hearts and minds of parents who worry that their child doesn't fit in and offer hope to parents who need strategies to support their quirky child's overall development.

Compassionate and effective strategies for raising a child with ADHD. Parenting children with ADHD, whether diagnosed or undiagnosed, can be challenging and complex. But just as a child who struggles with reading can learn to decode words, children with ADHD can learn patience, communication, and solution-seeking skills to become more confident, independent, and capable. This book, rich with optimism, tips, tools, and action plans, offers science-based insights and systems for parents to help cultivate these skills. Combining expert information with practical, sensitive advice, the eight “key” concepts here will help parents reduce chaos, improve cooperation, and nurture the advantages—like creativity and drive—that often accompany all of that energy. Based on author Cindy Goldrich's seven-session workshop entitled Calm and Connected: Parenting Kids with ADHD®, this book focuses on developing and strengthening effective interpersonal skills in both parents and children as a way to improve conflict resolution. Following the parenting principle to “Parent the child you have,” Goldrich offers advice to help readers tailor their parenting to meet the needs of their unique child. The book also leads parents to recognize the value of being a leader and a guide to children, building parents' confidence in their decision-making, and giving children a sense of safety, security, and confidence. The principles outlined in 8 Keys to Parenting Children with ADHD are appropriate for parenting kids of all ages—until they have “launched” and are on their own.

Bring an end to emotional eating by getting to the root of the problem. Most books about emotional eating tend to focus on how to strengthen self-restraint or how to identify what triggers it. The former can make the problem worse, while the latter may be different each time it occurs. Both approaches fail to help emotional eaters understand why they feel compelled to do something that they don't want to do in the first place. This understanding is the key to changing this behavior. Howard Farkas, who has more than two decades of professional and teaching experience as a clinical psychologist specializing in emotional eating, explains the underlying motive that drives the behavior: emotional eating is not a passive failure of self-control, but an active impulse to reject the control of dieting. This defiant need “to be bad” usually leaves the person feeling guilty and anxious about their eating, and recommitting to their diet until the cycle repeats, and the compulsive eating recurs. 8 Keys to End Emotional Eating provides a detailed plan for breaking this pattern. By explaining the root cause that drives the desire to binge, Farkas offers practical skills to help you learn to change your mindset about dieting and end the impulse to binge. His road map for the future will help readers maintain healthy eating habits for years to come.

A New Approach for Understanding and Parenting Easily Frustrated, Chronically Inflexible Children

Bringing attachment theory essentials to everyday life.

Parenting with Awareness blends old age wisdoms, new age concepts and current child development research to create a unique approach to parenting which honors the integrity of childhood. In today's competitive society parents have bought into the myth that they are solely responsible for molding their child's intelligence, talents and ultimate success creating enormous pressure to be the perfect parent. Our good intentions and expectations for our children to be better than average result in over-programmed, over-stressed families. Children are crying out for us to do better. They are showing us numerous signs that currently our way of raising children is not working. Less play, more structured activities and parental pressure to excel are creating children who are obese, exhibiting signs of stress, depression and anxiety in unprecedented numbers. We are all suffering. Often the opportunity to enjoy parenthood has dwindled down to a fleeting moment in an overloaded schedule. Marcie draws upon experts, sages and experience inviting parents to embark on a process of self-discovery to uncover their innermost passions, values, dreams and expectations for their children. It takes honest, secure parents who are at peace with themselves, free of ego demands, to be able to unconditionally love a child into adulthood. Whether you are a new parent just embarking on your parenting journey or a seasoned parent, these ideas will present a new way to explore life and approach parenting that will create children who are self-empowered, self-disciplined and self-motivated. Parenting from these principles will encourage and permit children to live in their own pace, driven by their own passions and dreams, while not trying to fit a patterned mold of conformity. Brain research has proven that children learn through experimentation. This book offers playful ways to teach children to embrace life with all of its wonder and potential through hands-on creative, fun activities designed for ages five and above. These inspiring projects coincide with guided conversations that will teach children self-awareness and self-reliance. They will also offer opportunities to develop the essential qualities of trust: intuition, passion, gratitude, confidence, compassion, courage, morality and patience as they strive to become successful, compassionate human beings. Children are born with open minds and hearts. They are eager to learn all that we have to teach. If we allow them to explore new ideas and assimilate the ones they resonate to, they will become empowered to create their own destiny. They will begin to appreciate their own uniqueness and value that in others. They will see the similarities in the human spirit and build respect for each other's differences. This is founded in the hope of creating the understanding that we are all in search of the same things on this journey called life - unconditional love, happiness and peace.

There are times when what a youngster does or says is absolutely baffling to mom or dad. How can 15-year-old Sarah spend hours prepping her hair and not give one second to cleaning her room? Likewise, what's wrong with 10-year-old Mark who knows he shouldn't bully his little brother but does so anyway? Certainly parents want answers, and no one is surprised when a parent falls back on interrogating a child or teen with repeated “Why?” or “What were you thinking?” questions.Unfortunately, searching for the reasons children behave as they do by asking the ubiquitous “Why?” is ultimately unsuccessful and, frankly, irrelevant. “I don't know,” “Because,” or “I wasn't thinking,” is the usual child response, resulting in frustrated parents and youngsters who feel embarrassed, stupid or annoyed.Drs. Charles C. Larson and John B. Dockstader, each with more than thirty years of experience working with parents and youngsters, advise parents to step back from situations such as those described and offer, instead, techniques for evaluating and solving family problems without needing to know “Why?”. The authors counsel parents how to determine if a problem exists, who owns the problem and who is best equipped to solve it. Numerous real-life examples are presented to illustrate the problem-solving process and solutions.In Parenting Without Guilt, parents learn not only to solve family problems, but also why the challenges parents and youngsters face today are more demanding than ever before. In addition, parents are guided through each stage of child development, from birth to young adulthood, with attention to typical problems any parent may anticipate. Resources that parents can use to help them resolve family discords are discussed, to include working with educators, clergy, pediatricians, private practitioners and others.With compassion, humor and wisdom gained through practical experience, Drs. Larson and Dockstader offer information and advice that provides any parent with the skills to raise successful children without guilt, anxiety or distress.
