This important volume is mainly concerned with the development of methods for ?sequencing? ? that is, determination of the order of the amino acids in proteins and of nucleotides in RNA and DNA. In 1943 the position of only one amino acid in a protein (insulin) was known, and Sanger's first paper resulted in finding a second amino acid. In his final paper in 1982 he describes the determination of a DNA sequence of 48,502 nucleotides. The papers describe the steady improvements in techniques, and exciting biological results revealed by the sequences.

In Remembrance of Patients Past, historian Geoffrey Reaume remembers previously forgotten psychiatric patients by examining in rich detail their daily life at the Toronto Hospital for the Insane (now called the Centre for Addiction and Mental Health – CAMH) from 1870-1940. Psychiatric patients endured abuse and could lead monotonous lives inside the asylum's walls, yet these same women and men worked hard at unpaid institutional jobs for years and decades on end, created their own entertainment, even in some cases made their own clothes, while forming meaningful relationships with other patients and some staff. Using first person accounts by and about patients – including letters written by inmates which were confiscated by hospital staff – Reaume weaves together a tapestry of stories about the daily lives of people confined behind brick walls that patients themselves built.

In September 1857, a wagon train passing through Utah laden with gold was attacked. Approximately 140 people were slaughtered; only 17 children under the age of eight were spared. This incident in an open field called Mountain Meadows has ever since been the focus of passionate debate: Is it possible that official Mormon dignitaries were responsible for the massacre? In her riveting book, Sally Denton makes a fiercely convincing argument that they were. The author – herself of Mormon descent – first traces the extraordinary emergence of the Mormons and the little-known nineteenth-century intrigues and tensions between their leaders and the U.S. government, fueled by the Mormons' zealotry and exclusionary practices. We see how by 1857 they were unique as a religious group in ruling an entire American territory, Utah, and commanding their own exclusive government and army. Denton makes clear that in the immediate aftermath of the massacre, the church began placing the blame on a discredited Mormon, John D. Lee, and on various Native Americans. She cites contemporaneous records and newly discovered documents to support her argument that, in fact, the Mormon leader, Brigham Young, bore significant responsibility – that Young, impelled by the church's financial crises, facing increasingly intense scrutiny and condemnation by the federal government, incited the crime by both word and deed. Finally, Denton explains how the rapidly expanding and enormously rich Mormon church of today still struggles to absolve itself of responsibility for what may well be an act of religious fanaticism unparalleled in the annals of American history. American Massacre is totally absorbing in its narrative as it brings to life a tragic moment in our history.

In the past decade, rapid digitalization has changed many elements of society, and education is no exception. The tradition of teacher-centered education has been long-held in education and is still extremely well established. Due to the access of technology for knowledge and education, however, the teacher's function in many classrooms has been to advise and guide as students take greater responsibility for their own learning using technology to collect information. Schools and universities across the world are beginning to redesign their learning spaces to enable this new model of education, foster more interaction and small group work, and use technology as an enabler of knowledge. Technology Training for Educators From Past to Present addresses the issues facing our education systems today and the role of technology and innovation in the global transformation of education. This book focuses on the fundamental need for educators at all levels to become knowledgeable with the technological teaching and learning tools at their disposal in order to best support student learning. Covering topics such as inclusion promotion in education, technology professional development, and online learning environments, this premier reference source is a valuable resource for educational administration and faculty, educators of K-12 and higher education, educational software developers, IT consultants, pre-service teachers, libraries, teaching colleges, researchers, and academicians.
