9708 Economics Paper 32 Oct Nov2013

Publishes in-depth articles on labor subjects, current labor statistics, information about current labor contracts, and book reviews. What determines the size and form of redistributive programs, the extent and type of public goods provision, the burden of taxation across alternative tax bases, the size of government deficits, and the stance of

monetary policy during the course of business and electoral cycles? A large and rapidly growing literature in political economics attempts to answer these questions. But so far there is little consensus on the answers and disagreement on the appropriate mode of analysis. Combining the best of three separate traditions—the theory of macroeconomic policy, public choice, and rational choice in political science—Torsten Persson and Guido Tabellini suggest a unified approach to the field. As in modern

macroeconomics, individual citizens behave rationally, their preferences over economic outcomes inducing preferences over policy. As in public choice, the delegation of policy decisions to elected representatives may give rise to agency problems between voters and politicians. And, as in rational choice, political institutions shape the procedures for setting policy and electing politicians. The authors outline a common method of analysis, establish several new results, and identify the main outstanding problems.

China from this period. Based on data obtained directly from Chinese sources, this book is the first attempt to provide Western readers with a reliable reference on the economy of mainland China. Nai-Ruenn Chen thoroughly and systematically examines each area of the economy and provides an authoritative guide to the terminology, classification, and method of collecting and listing data presented in the ample tables included in the book. Except in cases where missing information could be filled by simple arithmetic means or from descriptions by the Chinese themselves, no data was synthesized by inferential methods and no non-Chinese estimates were used. Rather Chen lists formulae for achieving indices for statistical measurement, defines geographical, economic, and administrative units of measurement, and explains the development of statistical procedures that have evolved in China. Moreover, the continuing perception of increased instability and worsening employment outcomes, and the growing concern over increased earnings inequality and labour market polarisation, have raised serious questions about the role of government not only in addressing the consequences of economic adjustment but also in
