This book is a revised version of my
first book, The Westerners; that was
published in 2005. The book also
comprises of poems written by the
author at the end of the book. The book
focuses on bullying behaviors, peer
pressures and a guide to effective ways
of coping. Although the experience of
bullying depicted in this book occurred
in High school, bullying does occur to
many children around the world from

comprising of work and relationships. I have experienced it first hand as a high school student, as an adult in my work areas, and I have seen my children also experience it. I find it a duty to heighten the awareness of bullying and peer pressures once again with the hope that young people will learn and cope in a more effective way. In the book, Selom, a foreign student from Africa tells her story about her encounter with bullying and peer pressures at first hand. In her ability to cope in an effective manner, she found strength in recognizing her good qualities over the bad qualities of the bullies. She found strength in engaging in activities in and outside of her school, and she engaged in activities that she was passionate about such as writing. Her experience is not only told in a story telling manner, she also expressed herself through her poems. I

hope that anyone who has been bullied can relate to this girls' story. Anyone who is being bullied can recognize it as a problem, and lastly be guided to overcome the powers of big bullies. This is based on a true life's story.

Originally published in 1985. This is an overview of the evolution of curriculum evaluation since the reforms of the 1960s, presented through the personal and practical knowledge of experienced individuals, rather than abstract theoretical models which hitherto dominated the field. A collection of personal retrospective accounts, by leading evaluators, of their roles in the actual process of curriculum development, the chapters represent diverse educational systems in a range of countries including Australia, Israel, England and the USA. A variety of innovative curricula are portrayed and the models which emerge are empirically based. Their diversity provides evidence

Since publication of the original edition of this book, there have been significant changes across the landscape of special education. This new edition addresses those changes and revisits enduring ethical issues that are most salient and pressing to special education teachers and

administrators. Using a case-based approach, this popular text encourages students to reason and collaborate about ethical issues rather than simply master a set of principles and precepts. The issues highlighted in this volume include due process, the distribution of educational resources, institutional unresponsiveness, professional relationships, conflicts among parents and teachers, and confidentiality. education policy and practice. As a researcher in the field, a lawyer, a former teacher, and as a parent, I recommend this book for all those who help students with disabilities succeed in life. This casebook highlights the importance of reasoned exploration and empathy when attempting to solve the kind of hard questions faced by members of school communities across the nation. We investigate the relationship between teacher licensure test scores and student test achievement and high school course-taking. We focus on three subject/grade combinations--middle school math, ninth-grade algebra and geometry, and ninth-grade biology--and find evidence that a teacher's basic skills test scores are modestly predictive of student achievement in middle and high school math and

highly predictive of student achievement in high school biology. A teacher's subject-specific licensure test scores are a consistent and statistically significant predictor of student achievement only in high school biology. Finally, we find little evidence that students assigned to middle school teachers with higher basic-skills test scores are more likely to take advanced math and science courses in high school.
