The monograph contains two case studies dealing with the phonetics and phonology of affricates and laryngeals from a survey of 281 languages. The empirical findings go counter to a number of assumptions in the

literature, e.g.: (1) affricates are exclusively stops from the perspective of phonology; (2) laryngeals are properties of the prosodic domains onset, nucleus, and coda; (3) phonetic strategies (affrication, laryngeal phasing) serve to make phonological specifications acoustically more salient.

study on the acquisition of verb
inflections in Q'anjob'al Maya.

Q'anjob'al has separate inflections for aspect, subject and object agreement, and status suffixes. The subject and object inflections display a split ergative pattern. The subjects of intransitive verbs with aspect markers take absolutive markers,

whereas the subjects of aspectless intransitive verbs take ergative markers. The acquisition of three types of clauses is explored in detail (imperatives, indicatives, and aspectless complements). The data come from longitudinal spontaneous speech of three monolingual Q'anjob'al children aged 1;8–3;5. This
