This book comprises select peer-reviewed papers from the International Conference on Emerging Trends in Electromechanical Technologies & Management (TEMT) 2019. The focus is on current research in interdisciplinary areas of mechanical, electrical, electronics and information technologies, and their management from design to market. The book covers a wide range of topics such as computer integrated manufacturing, additive manufacturing, materials science and engineering, simulation and modelling, finite element analysis, operations and supply chain management, decision sciences, business analytics, project management, and sustainable freight transportation. The book will be of interest to researchers and practitioners of various disciplines, in particular mechanical and industrial engineering.

The advent of new stock markets (the German Neuer Markt, the French Nouveau Marche, the Italian Nuovo Mercato and Nasdaq Europe) has been one of the most important reforms of stock exchanges in Continental Europe in the 1990s. These stock markets aimed at attracting early stage, innovative and high-growth firms that would not have been viable candidates for public equity financing on the main markets of European stock exchanges. Of these new markets, the Neuer Markt emerged as Europe's answer to NASDAQ. However, Europe's new stock markets met with only limited success. Stock prices plummeted after the ending of the stock market bubble and new markets suffered from poor liquidity, insider trading scandals and accounting frauds. This volume provides an overview of the rise and fall of Europe's new stock markets. It contains twelve papers which investigate the characteristics, the ownership structure and the market performance of companies in the short and long run. In addition this volume examines the role of venture capitalists. New stock markets offered venture capitalists an attractive exit for their investments and helped to create a more vibrant venture capital industry in Europe. The private equity market in Europe today is as large as it was just before the advent of new stock markets. As such, the need for stock markets that allow private equity investors to divest their equity stakes in growth companies continues to exist.

This open access book focuses on the development of methods, interoperable and integrated ICT tools, and survey techniques for optimal management of the building process. The construction sector is facing an increasing demand for major innovations in terms of digital dematerialization and technologies such as the Internet of Things, big data, advanced manufacturing, robotics, 3D printing, blockchain technologies and artificial intelligence. The demand for simplification and transparency in information management and for the rationalization and optimization of very fragmented and splintered processes is a key driver for digitization. The book describes the contribution of the ABC Department of the Polytechnic University of Milan (Politecnico di Milano) to R&D activities regarding methods and ICT tools for the interoperable management of the different phases of the building process, including design, construction, and management. Informative case studies complement the theoretical discussion. The book will be of interest to all stakeholders in the building process - owners, designers, constructors, and faculty managers - as well as the research sector.

The Religious Sense, the fruit of many years of dialogue with students, is an exploration of the search for meaning in life. Luigi Giussani shows that the nature of reason expresses itself in the ultimate need for truth, goodness, and beauty. These needs constitute the fabric of the religious sense, which is evident in every human being everywhere and in all times. So strong is this sense that it leads one to desire that the answer to life's mystery might reveal itself in some way.

The 2008 International Symposium on Rule Interchange and Applications (RuleML th 2008) , collocated in Orlando, Florida, with the 11 International Business Rules - rum, was the premier place to meet and to exchange ideas from all fields of rules te- nologies. The aim of RuleML 2008 was both to present new and interesting research results and to show successfully deployed rule-based applications. This annual sym- sium is the flagship event of the Rule Markup and Modeling Initiative (RuleML) . The RuleML Initiative (www.ruleml.org) is a non-profit umbrella organization of several technical groups organized by representatives from academia, industry and government working on rule technologies and applications. Its aim is to promote the study, research and application of rules in heterogeneous distributed environments such as the Web. RuleML maintains effective links with other major international societies and acts as intermediary between various 'specialized' rule vendors, appli- tions, industrial and academic research groups, as well as standardization efforts from, for example, W3C, OMG, and OASIS.

The International Workshop on Human-Friendly Robotics (HFR) is an annual meeting that brings together academic scientists, researchers and research scholars to exchange and share their experiences and research results on all aspects related to the introduction of robots into everyday life. HFR collects contributions on current developments of a new generation of human-friendly robots, i.e., safe and dependable machines, operating in the close vicinity to humans or directly interacting with them in a wide range of domains. The papers contained in the book describe the newest and most original achievements in the field of human-robot-interaction coming from the work and ideas of young researchers. The contributions cover a wide range of topics related to human-robot interaction, both physical and cognitive, including theories, methodologies, technologies, empirical and experimental studies.

Culture and Trust in Technology-Driven Organizations provides insight into the important role that culture and trust can play in the success of high-technology organizations. This book reviews the literature and results of an empirical study that investigated the relationship between mechanistic and organic cultures and the level of trust in technology-based organizations. The book outlines the literature on organizational trust and culture and the role theorists believe they play in the success of a changing domestic and global business environment. It identifies ways of defining culture and trust as well as the survey instruments used to measure them. The book then examines the results of two studies that demonstrate the connection between organizational culture and trust. The two studies were conducted at separate times using data collected from several companies within a three-hour radius of each other. These companies are highly dependent upon the ability to identify, hire, and retain highly skilled knowledge workers. These workers are critical for the companies to successfully compete within the scope of their business and expand into their current and other markets. The book provides a practitioner's guide—based on the literature review and the results of the studies examined—that can be used to assess, diagnose, and improve employees' perception of their work culture and improve trust found in organizations. This guide provides management with actions and activities that should be considered when handling the day-to-day business of the organization. If followed, these activities can be instrumental in designing a culture that leads to success and ease of operation for the organization and its members.

These peer-reviewed NIC XV conference proceedings present the latest major advances in nuclear physics, astrophysics, astronomy, cosmochemistry and neutrino physics, which provide the necessary framework for a microscopic understanding of astrophysical processes. The book also discusses future directions and perspectives in the various fields of nuclear astrophysics research. In addition, it also includes a limited number of section of more general interest on double beta decay and dark matter.

This book provides insights on a broad spectrum of renewable and sustainable energy technologies from the world ' s leading experts. It highlights the latest achievements in policy, research and applications, keeping readers up-to-date on progress in this rapidly advancing field. Detailed studies of technological breakthroughs and optimizations are contextualized with in-depth examinations of experimental and industrial installations, connecting lab innovations to success in the field. The volume contains selected papers presented at technical and plenary sessions at the World Renewable Energy Congress, the world's premier conference on renewable energy and sustainable development. Held every two years, the Congress provides an international forum that attracts hundreds of delegates from more than 60 countries.

Biocatalysis, the application of enzymes as catalysts for chemical synthesis, has become an increasingly valuable tool for the synthetic chemist. Enzymatic transformations carried out by enzymes or whole-cell catalysts are used for the production of a wide variety of compounds ranging from bulk to fine chemicals. The primary consideration for the incorporation of biotransformation in a synthetic sequence is regio- and stereocontrol that can be achieved with enzyme-catalyzed reactions. Biotransformations are thus becoming accepted as a method for generating optically pure compounds as well as for developing efficient routes to target compounds. This Special Issue aims to address the main applications of biocatalysis, isolated enzymes, and whole microorganisms in the synthesis of bioactive compounds and their precursors.

Il coaching. Un percorso efficace per crescere nello sviluppo professionale

This book presents cutting-edge research on innovative human systems integration and human/machine interaction, with an emphasis on artificial intelligence and automation, as well as computational modeling and simulation. It covers a wide range of applications in the areas of design, construction and operation of products, systems and services, and discusses the human factors in a wide range of settings. Gathering the proceedings of the 3rd International Conference on Intelligent Human Systems Integration (IHSI 2020), held on February 19/21, 2020, in Modena, Italy, the book's goal is to advance the theory and applications of artificial cognitive systems and improve human-artificial systems collaboration. Special emphasis is placed on automotive design, autonomous vehicles and the applications of artificial intelligence. The book offers a timely survey and source of inspiration for human factors engineers, automotive engineers, IT developers and UX designers who are working to shape the future of automated intelligent systems.
