Marcus Abaddon has been "chosen" to carry out a corrupt United States government agenda by crime lord Devin Bolos. Alongside Charles, Bolos runs an illegal drug operation, which includes some "atypical" chemicals that begin to alter Abaddon's state of mind. However, throughout the book Abaddon cannot help but feel the pull of holy spirit within (God) as he fights a spiritual warfare before seeking the spiritual guidance needed from old classmate Josh Slothers. Josh has become a successful pastor of a large church near Abaddon. As the end draws near for a clueless Abaddon, he is duped into a catastrophic event that

One day I woke up and realized that I had been lost for quite some time. I had got comfortable with how life was treating me. I no longer cared about how I presented myself, stuck between life and death, you know Purgatory. The real me had left long ago and the figure that I saw before me was just a shell that protects me until I could be found again. I had everything a woman could ask for and more yet

somehow and somehow I forgot about myself and ended up in the purgatory of living. When I had my epiphany, I discovered some things that I should have seen all along but was too busy allowing life to consume me that I didn't care to pay attention. You know, taking care of kids, husband, family, work, friends and oh yeah, then me if I'm not too tired.... Me! One day I found myself on the outside of the milk carton... Lost, hanging in the purgatory of living. It was the shock of my life yet not a shock for everyone else. Most often others can see what's going on in your life even when you cannot (or you think you do).

Its key strengths are its software infrastructure and resource-constrained applications, including desktop applications, servers, and performance-critical applications, not to forget its importance in game programming. Despite its strengths in these areas, beginners usually tend to shy away from learning the language because of its steep learning curve. The main mission of this book is to make you familiar and comfortable with C++. You will finish the book

not only being able to write your own code, but more importantly, you will be able to read other projects. It is only by being able to read others' code that you will progress from a beginner to an advanced programmer. This book is the first step in that progression. The first task is to familiarize you with the structure of C++ projects so you will know how to start reading a project. Next, you will be able to identify the main structures in the language, functions, and classes, and feel confident being able to identify the execution flow through the code. You will then become aware of the facilities of the standard library and be able to

determine whether you need to write a routine yourself, or use an existing routine in the standard library. Throughout the book, there is a big emphasis on memory and pointers. You will understand memory usage, allocation, and access, and be able to write code that does not leak memory. Finally, you will learn about C++ classes and get an introduction to object orientation and polymorphism.

Style and approach This straightforward tutorial will help you build strong skills in C++ programming, be it for enterprise software or for low-latency applications such as games or embedded programming. Filled

Certainly parents want answers, and no one is surprised when a parent falls back on interrogating a child or teen with repeated "Why?" or "What were you thinking?" questions. Unfortunately, searching for the reasons children behave as they do by asking the ubiquitous "Why?" is ultimately unsuccessful and, frankly, irrelevant. "I don't know," "Because," or "I wasn't thinking," is the

usual child response, resulting in frustrated parents and youngsters who feel embarrassed, stupid or annoyed. Drs. Charles C. Larson and John B. Dockstader, each with more than thirty years of experience working with parents and youngsters, advise parents to step back from situations such as those described and offer, instead, techniques for evaluating and solving family problems without needing to know "Why?". The authors counsel parents how to determine if a problem exists, who

In addition, parents are guided through each stage of child development, from birth to young adulthood, with attention to typical problems any parent may

based themes, neurologist and author Daniel C. Potts writes poetry about gratitude and spiritual transformation.

In this revised and expanded collection of essays on origins, mathematician Granville Sewell looks at the big bang, the fine-tuning of the laws of physics, and (especially) the evolution of life.

Sewell explains why evolution is a fundamentally different and much more difficult problem than others solved by science, and why increasing numbers of scientists are now recognizing what has long been obvious to the layman, that there is no explanation possible without design. This book summarizes many

of the traditional arguments for intelligent design, but presents some powerful new arguments as well. C is the programming language of choice when speed and reliability are required. It is used for many low-level tasks, such as device drivers and operating-system programming. For example, much of Windows and Linux is based on C programming. The updated 4th edition of Beginning C builds on the strengths of its predecessors to offer an essential guide for anyone who wants to learn C or desires a 'brush-up' in this compact, fundamental language. This classic from author, lecturer and respected academic Ivor Horton is the essential guide
