Professionalization has come to the field of threat management. It has developed a systematic theory unique to the field, recognized authorities have emerged, and it is finding its own ethical code of conduct. It is also beginning to grow its own culture, complete with a vocabulary of its own. Although the field has a way to go, it is well along th

Hearing Luxe Pop explores a deluxe-production aesthetic that has long thrived in American popular music, in which popular-music idioms are merged with lush string orchestrations and big-band instrumentation. John Howland presents an alternative music history that centers on shifts in timbre and sound through innovative uses of orchestration and arranging, traveling from symphonic jazz to the Great American Songbook, the teenage symphonies of Motown to the "countrypolitan" sound of Nashville, the sunshine pop of the Beach Boys to the blending of soul and funk into 1970s disco, and Jay-Z's hip-hop-orchestra events to indie rock bands performing with the Brooklyn Philharmonic. This book attunes readers to hear the discourses gathered around the music and its associated images as it examines pop's

relations to aspirational consumer culture, theatricality, sophistication, cosmopolitanism, and glamorous lifestyles.

Case Studies in Lifespan Development offers students a comprehensive view into life's key developmental stages through unique, diverse, and moving cases. Author Stephanie M. Wright presents a series of 12 case studies shaped by the contributions of real students—including their observations, concerns, and moments of triumph—to build immersive examples that readers can relate to and enjoy.

Historically, the first observation of a transmissible lytic agent that is specifically active against a bacterium (*Bacillus anthracis*) was by a Russian microbiologist Nikolay Gamaleya in 1898. At that time, however, it was too early to make a connection to another discovery made by Dmitri Ivanovsky in 1892 and Martinus Beijerinck in 1898 on a non-bacterial pathogen infecting tobacco plants. Thus the viral world was discovered in two of the three domains of life, and our current understanding is that viruses represent the most abundant biological entities on the planet. The potential of bacteriophages for infection treatment have been recognized after the discoveries by Frederick Twort and Felix d'Hérelle in 1915 and 1917. Subsequent phage therapy developments, however, have been overshadowed by the remarkable success of antibiotics in infection control and treatment, and phage therapy research and development persisted mostly in the former Soviet Union countries, Russia and Georgia, as well as in France and Poland. The dramatic rise of antibiotic resistance and especially of multi-drug resistance among human and animal bacterial pathogens, however, challenged the position of antibiotics as a single most important pillar for infection control and treatment. Thus there is a renewed interest in phage therapy as a possible additive/alternative therapy, especially for the infections that resist routine antibiotic treatment. The basis for the revival of phage therapy is affected by a number of issues that need to be resolved before it can enter the arena, which is traditionally reserved for antibiotics. Probably the most important is the regulatory issue: How should phage therapy be regulated? Similarly to drugs? Then the co-evolving nature of phage-bacterial host relationship will be a major hurdle for the production of consistent phage formulae. Or should we resort to the phage products such as lysins and the corresponding engineered versions in order to have accurate and consistent delivery doses? We still have very limited knowledge about the pharmacodynamics of phage therapy. More data, obtained in animal models, are necessary to evaluate the phage therapy

efficiency compared, for example, to antibiotics. Another aspect is the safety of phage therapy. How do phages interact with the immune system and to what costs, or benefits? What are the risks, in the course of phage therapy, of transduction of undesirable properties such as virulence or antibiotic resistance genes? How frequent is the development of bacterial host resistance during phage therapy? Understanding these and many other aspects of phage therapy, basic and applied, is the main subject of this Topic.

In the pursuit of more muscle, enhanced strength, sustained endurance and idealised physiques, an increasing number of elite athletes, recreational sport enthusiasts and body-conscious gym-users are turning to performance and image enhancing drugs and substances (PIEDS). In many instances, such use occurs with little regard for the health, social and economic consequences.? This book presents a nuanced, evidence-based examination of PIEDS. It provides a classification of PIEDS types, physical impacts, rates of use, user profiles, legal and sporting status, and remedial program interventions, covering both elite and recreational use. It offers the perfect guide to assist students, government policy makers and sport managers in understanding the complex issues surrounding PIEDS consumption.

This collection of essays focuses on current approaches to variation and change in historical English grammar and lexicon. Of the twelve papers in the collection, half are based on grammar and syntax, half on lexical developments. The volume highlights the contributions that strong empirical research can make to our knowledge of the development of English grammar, especially as realized in lexical development. In illustration of contemporary research trends, the articles in the collection make strong use of extralinguistic factors to discuss language change as well as argue for internal and structural development. The authors are drawn from nine different countries, and each article is followed by a commentary and response that provide actual dialogue about the issues in the field, thus representing world-wide discussion of issues in the history of English. The essays recognize the different audiences for historical variation and change - formal linguists, sociolinguists, and lexicographers - and specifically address the interests and discourse in those areas. The volume shows how historical studies of English are increasingly engaged with contemporary trends in linguistics, at the same time as demonstrating how empirical and other methods can bring classical philology fully into the sphere of contemporary linguistics without abandoning its traditional concerns.

Case Studies in the Wine Industry aims to close the gap between academic researchers and industry professionals through real world scenarios and field-based research. The book explores how consumer and sensory science has been implemented in the wine industry to achieve certain goals, including the rejuvenation of product image, the shaping of new market places, the achievement of market differentiation and geographical diffusion, the achievement of customer loyalty, and the promotion of traditional features of the product. There is an emerging demand from wine industry professionals and undergraduate and postgraduate students who attend business and agricultural studies courses who want to gain practical information through real cases and field-based research. Bridges the gap between scholars and practitioners in understanding consumers of wine Allows scientists and professionals to make the most of R&D outcomes Advances consumer science research to address business problems in the wine industry

Whales and dolphins are icons for the conservation movement. They are the most conspicuous ambassadors for entire marine ecosystems and possibly even for the biosphere as a whole. Concurrent with our realisation of impending threats to their environment is a growing scientific understanding of the social and cognitive complexity of many of these species. This book brings together experts in the relevant diverse fields of cetacean research, to provide authoritative descriptions of our current knowledge of the complex behaviour and social organization of whales and dolphins. The authors consider this new information in the context of how different human cultures from around the world view cetaceans and their protection, including attitudes to whaling. They show how new information on issues such as cetacean intelligence, culture and the ability to suffer, warrants a significant shift in global perceptions of this group of animals and how these changes might be facilitated to improve conservation and welfare approaches.

?Emerging? (or ?black?) farmers are often considered a homogeneous group. While individual emerging farmers and agribusinesses in South Africa share a common history, the case studies in this book show that in fact significant differences exist among them that are often hidden beneath the averaging and aggregation typical of most analytical research. Presenting fifteen case studies of emerging agribusinesses in South Africa, this book has three main objectives: (1) to capture the human stories behind the emerging farms and agribusinesses in South Africa in order to showcase their rich diversity, historical backgrounds, current context, and future directions; (2) to highlight the best practices, opportunities, and challenges facing South Africa?s emerging farmers and agribusinesses; and (3) to create a new set of instructional materials for academics and development practitioners, or as a point of reference for other entrepreneurs, members of government, and other practitioners engaged in

agriculture and agribusiness. The case study format, a relatively new tool in the field of agribusiness management, allows for a close-up view of the entrepreneurs at the heart of the businesses, providing an ideal lens through which to take a snapshot of the agribusiness landscape of South Africa today. This Fourth Edition of Harold Kerzner's Project Management Case Studies features a number of new cases covering value measurement in project management. Also included is the well-received "super case," which covers all aspects of project management and may be used as a capstone for a course. This new edition: Contains 100-plus case studies drawn from real companies to illustrate both successful and poor implementation of project management Represents a wide range of industries, including medical and pharmaceutical, aerospace, manufacturing, automotive, finance and banking, and telecommunications Covers cutting-edge areas of construction and international project management plus a "super case" on the Iridium Project, covering all aspects of project management Follows and supports preparation for the Project Management Professional (PMP®) Certification Exam Project Management Case Studies, Fourth Edition is a valuable resource for students, as well as practicing engineers and managers, and can be used on its own or with the new Eleventh Edition of Harold Kerzner's landmark reference, Project Management: A Systems Approach to Planning, Scheduling, and Controlling. The updated and much expanded 3e of the Handbook of Radioactivity Analysis is an authoritative reference providing the principles, practical techniques, and procedures for the accurate measurement of radioactivity from the very low levels encountered in the environment to higher levels measured in radioisotope research, clinical laboratories, biological sciences, radionuclide standardization, nuclear medicine, nuclear power, and fuel cycle facilities and in the implementation of nuclear forensic analysis and nuclear safeguards. The book describes the basic principles of radiation detection and measurement

and the preparation of samples from a wide variety of matrices, assists the investigator or technician in the selection and use of appropriate radiation detectors, and presents state-of-the-art methods of analysis. Fundamentals of radiation properties, radionuclide decay, the calculations involved, and methods of detection provide the basis for a thorough understanding of the analytical procedures. The Handbook of Radioactivity Analysis, 3e, is suitable as a teaching text for university and professional training courses. The only comprehensive reference that describes the principles of detection and practical applications of every type of radioactivity detector currently used. The new 3e is broader in scope, with revised and expanded chapters, new authors, and seven new chapters on Alpha Spectrometry, Radionuclide Standardization, Radioactive Aerosol Measurements, Environmental Radioactivity Monitoring, Marine Radioactivity Analysis, Nuclear Forensic Analysis and Analytical Techniques in Nuclear Safeguards Discusses in detail the principles, theory and practice applied to all types of radiation detection and measurement, making it useful for both teaching and research

This contemporary collection of national and international research on drug subcultures situates drug using behavior within an individual's social context so that readers may break through longstanding stereotypes concerning people who consume legal and illegal drugs. The diverse group of contributors employ a qualitative-interpretive research approach to finding answers to why people engage in this common form of deviant and/or criminal behavior. Essays address qualitative research methods and illicit drug use research, pursuing other forms of communication, after the party is over, and the emerging issues of managing drug use and misuse. For those interested in an interpretive analysis of drug use.

In today's world, everyone carries a toxic load of dozens of industrially produced chemicals in their bloodstream. Not only do these adversely affect the health of adults and children, but also, and more worryingly, they damage the development of unborn infants. The amniotic fluid of pregnant women has been found to contain a variety of chemicals, such as pesticides, plasticizers, disinfectant products, flame-retardants, surfactants and UV filters, many

of which interfere with fetal physiology, especially thyroid hormone action. Thyroid hormone is vital for brain development, particularly for the fetus during pregnancy and for toddlers. In fact, children born to women who lack this thyroid hormone (or who are unwittingly exposed to thyroid-disrupting chemicals) have lower IQs and more neurodevelopmental problems. Evolution of the human brain has involved multiple changes and processes dependent on thyroid hormone. The urgent question thus arises: Is chemical pollution poisoning brain development and reversing evolution's most outstanding achievement: the human brain? And if so, as this book convincingly illuminates, what can be done about it both collectively and individually? Toxic Cocktail provides a clear view of how many environmental chemicals interfere with brain development. As a result, this book looks at how we define and test IQ, the evidence for IQ loss, and how chemical pollution and thyroid hormone disruption can be actors in this process, as well as increasing neurodevelopmental disease risk.

Even in the absence of a major war, the world remains a dangerous place. Fuses are lit in practically every region and on every continent, which could eventually ignite a global conflagration and draw the world's superpowers into a deadly and catastrophic conflict. The U.S., Russia, and China all eye these regional conflicts with care—each hoping to use this turmoil to its advantage. Meanwhile, each of these countries attempts to avoid major direct intervention that would trigger their rivals into action. We are, perhaps, at the most dangerous moment since 1914, when similar smoldering conflicts led to the senseless mass slaughter known as World War I. In *Cocktails from Hell*, Col. Austin Bay provides a concise and indispensable guide to the most dangerous threats against peace facing the United States—and the world. An expert in military strategy, analysis, and planning, Bay uses his critical eye and sharp pen to bring each of these bubbling global situations into sharp focus, both in their local and global contexts. Civilian students of war and military experts alike will benefit from his knowledge and insights. If you truly want to understand the state of today's society—and the role that the U.S. must play in order to successfully avoid the next Great War—this book is a must-read.

Ideal for microbiology/science majors The third edition of Microbiology provides in-depth coverage of the science of microscopic organisms. Providing a balanced presentation of foundational concepts, real-world applications, and current research and experimentation, this comprehensive textbook facilitates a thorough understanding of the scope, nature, and complexity of microbiology. The text approaches the subject within the context of exploration and experimentation, integrating a wealth of classroom-tested pedagogical features. The material is organized around the three pillars of physiology, ecology and genetics — helping students appreciate the interconnected and dynamic nature of microbiology as they explore individual microbes and the relation between different types of microbes, other organisms, and the environment. Detailed yet accessible chapters illustrate how an experiment proceeds, explain how microbes replicate, clarify the flow of concept processes, and summarize key points. Challenging end-of-chapter questions both test students' understanding of the material and strengthen critical thinking skills. This new edition contains up-to-date coverage of topics including DNA replication and gene expression, viral pathogenesis, microbial biotechnology, adaptive immunity, the control of infectious diseases, the microbiology of food and water, and integrated coverage of COVID-19.

Resolving Spectral Mixtures: With Applications from Ultrafast Time-Resolved Spectroscopy to Superresolution Imaging offers a comprehensive look into the most important models and frameworks essential to resolving the spectral unmixing problem—from multivariate curve resolution and multi-way analysis to Bayesian positive source separation and nonlinear unmixing. Unravelling total spectral data into the contributions from individual unknown components with limited prior information is a complex problem that has attracted continuous interest for almost four decades. Spectral unmixing is a topic of interest in statistics, chemometrics, signal processing, and image analysis. For decades, researchers from these fields were often unaware of the work in other disciplines due to their different scientific and technical backgrounds and interest in different objects or samples. This led to the development of quite different approaches to solving the same problem. This multi-authored book will bridge the gap between disciplines with contributions from a number of well-known and strongly active chemometric and signal processing research groups. Among chemists, multivariate curve resolution methods are preferred to extract information about the nature, amount, and location in time (process) and space (imaging and microscopy) of chemical constituents in complex samples. In signal processing, assumptions are usually around statistical independence of the extracted components. However, the chapters include the complexity of the spectral data to be unmixed as well as dimensionality and size of the data sets. Advanced spectroscopy is the key thread linking the different chapters.

Applications cover a large part of the electromagnetic spectrum. Time-resolution ranges from femtosecond to second in process spectroscopy and spatial resolution

covers the submicronic to macroscopic scale in hyperspectral imaging. Demonstrates how and why data analysis, signal processing, and chemometrics are essential to the spectral unmixing problem Guides the reader through the fundamentals and details of the different methods Presents extensive plots, graphical representations, and illustrations to help readers understand the features of different techniques and to interpret results Bridges the gap between disciplines with contributions from a number of well-known and highly active chemometric and signal processing research groups

Interdisciplinary research now receives a great deal of attention because of the rich, creative contributions it often generates. But a host of factors--institutional, interpersonal and intellectual--also make a daunting challenge of conducting research outside one's usual domain. This newly updated and revised edition of *Interdisciplinary Research* is a substantive and practical guide to the most effective avenues for collaborative and integrative research in the social, behavioral, and bio-medical sciences. It provides answers to questions such as what is the best way to conduct interdisciplinary research on topics related to human health, behavior, and development? Which are the most successful interdisciplinary research programs in these areas? How do you identify appropriate collaborators? How do you find dedicated funding streams? How do you overcome peer-review and publishing challenges? This is the only book that provides answers directly from researchers who have carried out successful interdisciplinary programs. The editors give a concise account of the lessons that can be taken from the book, and then present a series of case studies that reveal the most successful interdisciplinary research programs. These programs provide a variety of models of how best to undertake interdisciplinary research. Each of the chapter authors has carried out innovative, collaborative programs, and all give compelling accounts of the benefits of interdisciplinary research and the central strategies required to achieve them.

From the authors of the bestselling and genre-defining cocktail book *Death & Co*, *Cocktail Codex* is a comprehensive primer on the craft of mixing drinks that employs the authors' unique "root cocktails" approach to give drink-makers of every level the tools to understand, execute, and improvise both classic and original cocktails. JAMES BEARD AWARD WINNER • WINNER OF THE TALES OF THE COCKTAIL SPIRITED AWARD® FOR BEST NEW COCKTAIL OR BARTENDING BOOK • NAMED ONE OF THE BEST COOKBOOKS OF THE YEAR BY CHICAGO TRIBUNE "There are only six cocktails." So say Alex Day, Nick Fauchald, and David Kaplan, the visionaries behind the seminal craft cocktail bar *Death & Co*. In *Cocktail Codex*, these experts reveal for the first time their surprisingly simple approach to mastering cocktails: the "root recipes," six easily identifiable (and memorizable!) templates that encompass all cocktails: the old-fashioned, martini, daiquiri, sidecar, whisky highball, and flip. Once you understand the hows and whys of each "family," you'll understand why some cocktails work and others don't, when to shake and when to stir, what you can omit and what you can substitute when you're missing ingredients, why you like the drinks you do, and what sorts of drinks you should turn to—or invent—if you want to try something new. Praise for *Cocktail Codex* "Learn the template, and any cocktail you can think of is within reach."—*Food & Wine* "Too bad all college textbooks weren't this much fun."—*Garden & Gun* "A must for amateur and pro mixologists alike."—*Chicago Tribune* "If *Dora the Explorer* turned twenty-one, split herself into three people, and decided to write the *Magna Carta* of booze books, this would be the result. And, unlike every other book you'll read this year, *Cocktail Codex* is packed with actual knowledge you can use in the real world. Please, please, can *Cinema Codex* be next?"—Steven Soderbergh, filmmaker
The casebook provides 17 additional case histories based on the authors' clinical experiences, each going beyond DSM-IV diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a specific treatment plan, and the actual treatment conducted. The casebook also provides 3 cases without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies.

Proceedings of the Center for Perinatal Biology 40th Anniversary Symposium

Underlying Mechanisms and Diagnosis

To celebrate the Center for Perinatal Biology's 40th Anniversary, an illustrious group gathered at Loma Linda University in February 2013. That gathering of experts and this volume of the proceedings are a tribute to the founder of the Center, Lawrence D. Longo, M.D. These chapters present contributions from individuals who in some way or another were influenced by Dr. Longo. Covering a wide range of topics, and illustrating the diversity of thinking and scientific interests, these proceedings address basic science through to clinical problems in the developmental programming of health and disease.

Materials are evolving faster today than at any time in history. As a consequence the engineer must be more aware of materials and their potential than ever before. In comparing the properties of competing materials with precision involves an understanding of the basic properties of materials, how they are controlled by processing, formed, joined and finished and of the chain of reasoning that leads to a successful choice. This book will provide the reader with this understanding. Materials are grouped into four classes: Metals, Ceramics, Polymers and Composites, and each are examined in turn. The chapters are arranged in groups, with a group of chapters to describe each of the four classes of materials. Each group first of all introduces the major families of materials that go to make up each materials class. The main microstructural features of the class are then outlined and the reader is shown how to process or treat them to get the structures (properties) that are wanted. Each group of chapters is illustrated by Case Studies designed to help the reader understand the basic material. This book has been written as a second level course for engineering students. It provides a concise introduction to the microstructures and processing of materials and shows how these are related to the properties required in engineering design. Unique approach to the subject World-renowned author team Improved layout and format

While scientists win occasional skirmishes in the battle against

cancer, the overall war continues to go badly. Stories abound about revolutionary drugs that may be available in the future, but offer no real help to those who have cancer today. At present, conventional approaches continue to rely on a narrowly focused strategy of treatments, with doctors using, at best, only one or two drugs or other therapies at a time. While this may be acceptable in a laboratory setting or a clinical trial, it has done little to diminish the number of people who die each year from this dread disease. Recently, however, conventional medicine's core strategy has been re-examined, and a new, potentially more effective approach has emerged—one that combines the best of Eastern wisdom with Western science. Beyond the Magic Bullet—The Anti-Cancer Cocktail by Dr. Raymond Chang takes a penetrating look at this bold new way of treating cancer. The book begins by examining modern medicine's use of surgery, radiation, chemotherapy, hormone therapy, and targeted drugs in the war against cancer. It then offers a new therapy based on the knowledge that certain off-label drugs, nutrients, and therapies are each somewhat effective against cancer. By combining these therapeutic agents into a "cocktail," doctors have found that they can attack the cancer all at once, on many different levels and at several different angles, with the goal of overwhelming the disease. Dr. Chang not only discusses the effectiveness of the cocktail, but also provides an examination of the most valuable agents available. For over a thousand years, Traditional Chinese Medicine has used the cocktail approach to safely and effectively fight disease. Throughout the world, the most successful treatments for HIV and Hepatitis C are based on this strategy. Beyond the Magic Bullet—The Anti-Cancer Cocktail leads the way to a bright new future of hope and healing.

that revolutionize your expectations about what a drink can look and taste like. Years of rigorous experimentation and study—botched attempts and inspired solutions—have yielded the recipes and techniques found in these pages. Featuring more than 120 recipes and nearly 450 color photos, *Liquid Intelligence* begins with the simple—how ice forms and how to make crystal-clear cocktails in your own freezer—and then progresses into advanced techniques like clarifying cloudy lime juice with enzymes, nitro-muddling fresh basil to prevent browning, and infusing vodka with coffee, orange, and peppercorns. Practical tips for preparing drinks by the pitcher, making homemade sodas, and building a specialized bar in your own home are exactly what drink enthusiasts need to know. For devotees seeking the cutting edge, chapters on liquid nitrogen, chitosan/gellan washing, and the applications of a centrifuge expand the boundaries of traditional cocktail craft. Arnold's book is the beginning of a new method of making drinks, a problem-solving approach grounded in attentive observation and creative techniques. Readers will learn how to extract the sweet flavor of citrus without the spice, why bottling certain drinks beforehand beats shaking them at the bar, and how quinine powder and succinic acid lead to the perfect gin and tonic. *Liquid Intelligence* is about satisfying your curiosity and refining your technique, from red-hot pokers to the elegance of classic cocktails. Whether you're in search of astounding drinks or a one-of-a-kind journey into the world of cocktail making, *Liquid Intelligence* is the ultimate standard—one that no bartender or drink enthusiast should be without.
