

Financial Statement Analysis For Non Financial Managers: Property And Casualty Insurance

Financial statement analysis involves an understanding of an entity by applying analytical techniques to its accounting numbers. However, financial statement analyses are going through a transformation similar to the manufacturing age changing to information centered orientation. That is, it is no longer sufficient to understand the tools for analysing financial accounting information. Other types of relevant information that are not directly captured by financial statement information have a profound effect on creditors, investors, reporting bureaus, governmental agencies and regulators. This text differs from other financial statement textbooks in that it not only takes the traditional analysis of financial information, but also management and economic information that is not directly measured or easily derived from financial accounting reports. Further, this textbook emphasises the measurement and valuation of brand, sustainability, ethical systems and trusts systems. Moreover, this text also differs in that it provides a modeling viewpoint of information analysis linked with decision makers perception and judgments before arriving at a decision. The modeling perspective enhances financial statement analysis by: 1. Including not only financial information, but also management and economic information; 2. Combining the passive tools used in investment and financial analysis (eg: ratio analysis) with individuals framing of the problem (perception) and analysis (judgment) before arriving at a decision; 3. Viewing information analysis through a camera lens reinforced by a basic two stage modeling approach in order to support decisions regarding a particular course of action to implement. Further, this text transforms what other financial statement analysis textbooks emphasise as an input-output and static analysis approach to a more dynamic and process approach. In addition, this textbook divulges from a financial analysis viewpoint to a knowledge creation perspective. This new knowledge creation perspective is intended for upper level undergraduates and graduate students, such as accounting, economic, finance, information systems, marketing, organisational behavior students, and psychology and sociology students. In addition, this book can be beneficial to government, non-profit and business oriented individuals.

Through a mixture of concepts and examples, this book demystifies the variety of elements of financial accounting and uncovers the need-to-know information for certification in this field. This book covers the two aspects of financial statement analysis, namely quantitative and non-quantitative analysis. Concluding with helpful case studies, the book will appeal to students and academics of financial accounting.

Seamlessly bridging academic accounting with real-life applications, Crash Course in Accounting and Financial Statement Analysis, Second Edition is the perfect guide to a complete understanding of accounting and financial statement analysis for those with no prior accounting background and those who seek a refresher.

The assets and liabilities are mostly financial based, and the equity ratio is far lower than the equity ratios of industrial companies. This book, by experienced bank analyst Thomas Padberg, provides analysts and investors with the tools to analyse bank financial statements, find problems in bank finances, and assess the risks of banks. Examples with real bank financial data are used to show readers the step-by-step methods to follow when looking at bank financial statements. How to Read a Financial Report

Financial statement analysis seems like an obscure and complicated endeavor -- and, indeed, it is. However, even if you're not an economics major there are certain times when having a rudimentary working understanding of financial statement analysis can be really important. Most commonly, people find that they need to do some financial statement analysis if they're looking to invest in a company or evaluate its financial condition. So if you want to be a savvy investor, how do you go about it? That's what we'll discuss in this book.

All business organizations produce financial statements, and the information communicated (or hidden) in these is relevant to a wide range of users. Gain a deeper understanding of Asian financial reporting and how to detect irregularities The Asian region, and particularly China, is becoming a hotbed of investment activity. There have been quite a few accounting scandals in Asia in the recent years - now rivaling those we have seen in the Americas and Europe. Assessing potential or active overseas investments requires reliance on financial statements, the full parameters of which may vary from region to region. To effectively analyze statements, it is necessary to first understand the framework underlying these financial statements and then lay out a protocol for detecting irregularities. It's impossible to create and implement a practical plan without a deeper knowledge of the various factors at play. Asian Statement Analysis: Detecting Financial Irregularities provides a framework for analysis that makes irregularities stand out. Authors Chin Hwee Tan and Thomas R. Robinson discuss international financial reporting standards, including characteristics particular to the Asian region. Tan and Robinson's combined background in academia and Asian finance give them a multi-modal perspective and position them as top authorities on the topic. In the book, they address issues such as: Detection of irregularities independent of particular accounting rules The most common irregularities in the Asian market Similarities and differences between U.S. and Asian accounting techniques An overarching framework for irregularity detection The book uses real-world examples to illustrate the concepts presented, with the focus on Asian companies. As the first ever in-depth study on manipulation and irregularities in the Asian market, Asian Financial Statement Analysis: Detecting Financial Irregularities is uniquely positioned to be a valuable resource in the move toward the next phase of global reporting standards.

Morley translates the accounting language of financial statements into clear, easy-to-understand terms that anyone who needs to make well-informed financial decisions quickly will appreciate.

Bachelor Thesis from the year 2017 in the subject Business economics - General, grade: 1.7, Fachhochschule Bonn-Rhein-Sieg, language: English, abstract: The general aim of this present thesis is to gain insight into the economic situation of both companies from published annual reports and then into the development of Huawei and Ericsson within six years, since other sources of financial data are not available to outsiders, and the analysis of the consolidated financial statements of Huawei and Ericsson, which was prepared in accordance with IFRSs, within the six year period, gives insights into the economic situation of the two companies. To be more precise, the objectives of this essay are to analyze the financial statements of those two communication technology companies using various financial indicators in order to evaluate both balance sheets' structures, liquidity situations and performances, then to perform a comparison between those two companies in order to study the development of both companies during the last six years and to find out how Huawei overtook its rival Ericsson and whether this success and continuous growth is still sustainable in the current global economic recession and financial crisis as well as in the future. This thesis's main task is to compare the analytic results of the two firms from 2011 to 2016 in order to find out to what extent Huawei has surpassed Ericsson, using the instruments of financial statement analysis. First, using the principle of Küting and Weber, we reformulated the financial statements of the two companies to make them more comparable, and then we calculated the necessary key ratios extracted from annual financial reporting so that we can make comparison and outline the company's status in three aspects, i.e. structure, liquidity, and performance. At last, after comparison of ratios of the two companies conclusions were drawn.

Despite a plethora of techniques to analyse the financial performance of a business, there has been no single methodology that has been overwhelmingly preferred by users. This could be an indication that either the methods themselves are deficient or they are limited by other factors that are not easily overcome. Unlike the current offerings in the field, which focus on issues relating to business performance management or non-financial aspects (such as market efficiency, satisfaction and workforce productivity), this book offers a solution to a major gap in the literature and understanding for those seeking to measure, analyse and benchmark the financial performance of any organisation (for-profit, not-for-profit and government agencies). It clearly identifies why current techniques fail; proposes and evidences a solution that overcomes these issues by including two algorithms that can be combined, to solve this problem; and demonstrates the practical application of the technique to the benefit of users in order to pinpoint real performance levels and insights. One of the largest issues this book will help to overcome is the inability to compare the accounts of businesses/organisations from different countries that report in different currencies. This technique eliminates the need for currency translations and the issues that arise with that process. This book is an invaluable and practical guide to assist accounting and finance practitioners in measuring and comparing financial performance across firms with different business models, different accounting policies and different scales of operations.

The perfect guide for every non-financial manager or entrepreneur who needs to know more about the flow of cash and product.

Although the need to expand the boundaries of financial reporting has been discussed since the mid-1990s, little consideration has been given to the evolution and discourses of integrated reporting of non-financial aspects. Yet by investigating how and why an organisation defines and its reporting boundaries, it is possible to understand what is truly "valued" (or not) in its business model. This innovative book reviews the guidelines and frameworks from the major relevant international organisations including: the International Accounting Standards Board, Global Reporting Initiative, Sustainability Accounting Standards Board, International Integrated Reporting Council, Carbon Disclosure Standards Board, and the World Intellectual Capital Initiative, and analyses their development and impact on the boundaries of financial and non-financial reporting. Illustrated with case studies and interviews with representatives of these organisations, this concise volume makes a significant contribution to the future of reporting theory and practice. It will be of great interest to advanced students, researchers, practitioners and policy makers.
