Hands-on with pet beetles in Japan, releasing lab-raised mosquitoes in Brazil, beekeeping on a Greek island, or using urine and antlers as means of ancient pest control, MacNeal’s quest appeals to the squeamish and brave alike. Three out of every four of our planet's known animal species are insects. In *The Insect Crisis*, acclaimed journalist Oliver Milman dives into the torrent of recent evidence that suggests this kaleidoscopic group of creatures is suffering the greatest existential crisis in its remarkable 400-million-year history. What is causing the collapse of the insect world? Why does this alarming decline pose such a threat to us? And what can be done to stem the loss of the miniature empires that hold aloft life as we know it? With urgency and great clarity, Milman explores this hidden emergency, arguing that its consequences could even rival climate change. He joins the scientists

*The neem tree, one of the most  
promising of all plants, may  
eventually benefit every person on the  
planet. Probably no other plant yields  
as many varied products or has as  
many exploitable by-products. Indeed,  
as foreseen by some scientists, this  
tree may usher in a new era in pest  
control; provide millions with  
inexpensive medicines; cut the rate of*
