Guide to Success As a Nurse Anesthesia Student

CRNA certification examination success is of critical importance to nurse anesthesia students, educators, and programs. While rigorous entry criteria exist in nurse anesthesia programs, a small percentage of students enter a program and either do not complete the program or do not pass the certification examination on the first attempt. This retrospective study examines the de-identified grades of 266 students from a ten year period at the Case Western Reserve University Nurse Anesthesia Program. The purpose of the study was to determine if anesthesia student grades in any first semester course is related to student attrition and/or success on the certification examination. Chi-square analysis was used to establish the association between grades in first semester nurse anesthesia courses (Chemistry and Physics of Anesthesia, Anesthesia Basics I, and Pharmacological Strategies in Anesthesia Practice) and success/failure on the certification examination and attrition from the program. Passing a course in the nurse anesthesia program was a grade of 'B' or better, while passing the certification examination was an overall score of 450 or better. The results of the comparison of the two dichotomous variables is statistically significant ( $\chi^2=39.902$ , p
