

Idaho, Wild Scenic 2017 Square

Wildfires represent a growing threat to environments, to people, communities, and to societies worldwide, particularly in the United States, Southern Europe, and Australia. Recognition of this growing risk has highlighted a need to develop people's capacity to adapt to annually occurring events that could increase in frequency and severity over the coming years and decades. The goal of ensuring sustained levels of protective measures in communities susceptible to wildfire hazard consequences has proved to be elusive. This book examines why this is so and identifies ways in which sustained levels of preparedness can be facilitated. Major topics include: wildfire preparedness and resiliency in community contexts; socially disastrous landscape fires in southeastern Australia; landscape typology of residential wildfire risk; proactive human response to wildfires outbreak; forest fires in wildland-urban interface, wildfire risk management; "stay or go" policy in the line of fire; social dimensions of forest fire; the influence of community diversity; evaluating a community engagement initiative; response to fire threats; social media and resiliency; and building on lessons learned. Additional information includes the landscape fires in southeastern Australia, wildfire risk management in Portugal; fire preparedness in Greece, Cyprus, and the Pine Barrens in the northeastern United States. The findings of research programs being conducted in the United States, Australia, Europe, India and South America are presented. The book includes case studies on the analysis and proposed actions of the wildland-urban interface being faced by Central Chile and South America. This book will provide a comprehensive and systematic review of the wildfire preparedness research and its application to the development of risk communications and public education programs.

The Farragut Naval Training Station, located near Coeur d' Alene, Idaho, was only operational between 1942 and 1946, but during that time it was the largest city in Idaho, the largest business in Idaho, and the second-largest U.S. naval training station. Named for Civil War hero Adm. David G. Farragut, it trained sailors from 23 different states and by June 15, 1946, the day its doors closed, a total of 293,381 recruits, or "boots," and over 25,943 service-school sailors had passed through its doors. At least two Medal of Honor recipients and one Navy Cross recipient, along with a future governor of Idaho, spent time at the station. After its decommissioning, it served as the Farragut College and Technical Institute. Today it is the site of Farragut State Park and a small U.S. Navy acoustic research detachment. Retiring to a seaside cabin near San Francisco, Jack Duloz looks for tranquility, but finds only horror and despair.

The federal government owns roughly 640 million acres, about 28% of the 2.27 billion acres of land in the United States. Four agencies administer 608.9 million acres of this land: the Bureau of Land Management (BLM), Fish and Wildlife Service (FWS), and National Park Service (NPS) in the Department of the Interior (DOI), and the Forest Service (FS) in the Department of Agriculture. Most of these lands are in the West and Alaska. In addition, the Department of Defense administers 14.4 million acres in the United States consisting of military bases, training ranges, and more. Numerous other agencies administer the remaining federal acreage. The lands administered by the four land agencies are managed for many purposes, primarily related to preservation, recreation, and development of natural resources. Yet each of these agencies has distinct responsibilities. The BLM manages 247.3 million acres of public land and administers about 700 million acres of federal subsurface mineral estate throughout the nation. The BLM has a multiple-use, sustained-yield mandate that supports a variety of uses and programs, including energy development, recreation, grazing, wild horses and burros, and conservation. The FS manages 192.9 million acres also for multiple uses and sustained yields of various products and services, including timber harvesting, recreation, grazing, watershed protection, and fish and wildlife

habitats. Most of the FS lands are designated national forests. Wildfire protection is increasingly important for both agencies. The FWS manages 89.1 million acres of the total, primarily to conserve and protect animals and plants. The National Wildlife Refuge System includes wildlife refuges, waterfowl production areas, and wildlife coordination units. The NPS manages 79.6 million acres in 401 diverse units to conserve lands and resources and make them available for public use. Activities that harvest or remove resources generally are prohibited. Federal land ownership is concentrated in the West. Specifically, 61.2% of Alaska is federally owned, as is 46.9% of the 11 coterminous western states. By contrast, the federal government owns 4.0% of lands in the other states. This western concentration has contributed to a higher degree of controversy over land ownership and use in that part of the country. Throughout America's history, federal land laws have reflected two visions: keeping some lands in federal ownership while disposing of others. From the earliest days, there has been conflict between these two visions. During the 19th century, many laws encouraged settlement of the West through federal land disposal. Mostly in the 20th century, emphasis shifted to retention of federal lands. Congress has provided varying land acquisition and disposal authorities to the agencies, ranging from restricted to broad. As a result of acquisitions and disposals, federal land ownership by the five agencies has declined by 23.5 million acres since 1990, from 646.9 million acres to 623.3 million acres. Much of the decline is attributable to BLM land disposals in Alaska and also reductions in DOD land. Numerous issues affecting federal land management are before Congress. They include the extent of federal ownership, and whether to decrease, maintain, or increase the amount of federal holdings; the condition of currently owned federal infrastructure and lands, and the priority of their maintenance versus new acquisitions; the optimal balance between land use and protection, and whether federal lands should be managed primarily to benefit the nation as a whole or instead to benefit the localities and states; and border control on federal lands along the southwest border.

This beautiful and definitive guide brings together the world's lead leading expert on North American trout and salmon, Robert Behnke, and the foremost illustrator in the field, Joseph Tomelleri. North America is graced with the greatest diversity of trout and salmon on earth. From tiny brook trout in mountain streams of the Northeast, to cutthroat trout in the rivers of the Rockies, to Chinook salmon of the Pacific, the continent is home to more than 70 types of trout and salmon. How this came to be, how they are related, and what makes them unique -- and so breathtaking -- is the story of Trout and Salmon of North America. The more than 100 illustrations of trout and salmon by Joseph Tomelleri showcased here exhibit a genius for detail, coloration, and proportion. Each portrait is made from field notes, streamside observations, photographs, and specimens collected by the artist. The result is a set of the most accurate and stunning illustrations of fish ever created. Robert Behnke has distilled 50 years of his research and writing about trout and salmon in completing this book. No one understands better than Behnke the diversity and conservation issues concerning these fishes or communicates so lucidly the biological wonders and complexities of their particular beauty. Also included are more than 40 richly detailed maps that clearly show the ranges of populations of trout and salmon throughout North America. An irresistible delight for anyone who appreciates natural history, Trout and Salmon of North America is a master guide to the natural elegance of our native fishes.

Idaho is now seen as one of the most intriguing and attractive states in the Union. Any view of the Gem State is likely to be broadened and deepened by this superbly written history of it, In Mountain Shadows. Carlos A. Schwantes illustrates the extent to which Idahoans have always been divided by geography, transportation patterns, religion, and history. Although the state motto should have been "Divided We Stand," as he says in affectionate jest, it is also true that Idahoans come together on some basics—on avoiding crowds and maintaining the good life close to scenic mountains and streams. Schwantes reaches back to 1805, when Lewis and Clark were among the first white men to enter present-day Idaho. He describes the Indians then living in the Great Basin and Plateau, and proceeds through layers of history to show how fur traders, missionaries, and overland emigrants defined the land that became a territory in 1863 and, finally, a state in 1890. The vigilantism, Indian wars, mining booms and busts, and an-imosity toward Mormons and Chinese immigrants that marked the territorial years gave way to more troubles in the early years of statehood: an economic downturn, industrial violence, political protest. The arrival of automobiles promised to end isolation, but the formidable terrain slowed the building of north-south highways, just as it had railroads. Nevertheless, future Idaho would be a product of engineering and witness the coming of irrigation systems and hydroelectric plants. Schwantes brings his history through the Great Depression, World War II, and the Cold War, noting everyday life, colorful personalities, political and economic cycles, raging controversies, and current trends.

This long-anticipated reference and sourcebook for California's remarkable ecological abundance provides an integrated assessment of each major ecosystem type—its distribution, structure, function, and management. A comprehensive synthesis of our knowledge about this biologically diverse state, Ecosystems of California covers the state from oceans to mountaintops using multiple lenses: past and present, flora and fauna, aquatic and terrestrial, natural and managed. Each chapter evaluates natural processes

for a specific ecosystem, describes drivers of change, and discusses how that ecosystem may be altered in the future. This book also explores the drivers of California's ecological patterns and the history of the state's various ecosystems, outlining how the challenges of climate change and invasive species and opportunities for regulation and stewardship could potentially affect the state's ecosystems. The text explicitly incorporates both human impacts and conservation and restoration efforts and shows how ecosystems support human well-being. Edited by two esteemed ecosystem ecologists and with overviews by leading experts on each ecosystem, this definitive work will be indispensable for natural resource management and conservation professionals as well as for undergraduate or graduate students of California's environment and curious naturalists.

Transportation Decision Making

This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation, estimating travel demand, and costing transportation projects

Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility-specific and system-wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decision making. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation. With this platform, we the Republican Party reaffirm the principles that unite us in a common purpose. We believe in American exceptionalism. We believe America is exceptional because of our historic role - first as refuge, then as defender, and now as exemplar of liberty for the world to see. We believe our constitutional system - limited government, separation of powers, federalism, and the rights of the people - must be preserved uncompromised for future generations. We believe political freedom and economic freedom are indivisible. When political freedom and economic freedom are separated - both are in peril; when united, they are invincible. We believe that people are the ultimate resource - and that the people, not the government, are the best stewards of our country's God-given natural resources. As Americans and as Republicans we wish for peace - so we insist on strength. We will make America safe. We seek friendship with all peoples and all nations, but we recognize and are prepared to deal with evil in the world. Based on these principles, this platform is an invitation and a roadmap. It invites every American to join us and shows the path to a stronger, safer, and more prosperous America.
