**Manual of Oil and Gas Terms** is an easy-to-use softcover desk reference that defines the words and phrases most useful to lawyers, landmen, accountants, investors in oil and gas properties, students, and others involved in the industry. For example, a petroleum engineer might find the book helpful on the meaning of the "Unless" clause in an oil and gas lease; a landman might refer to the Manual to clarify the purpose and meaning of various lease clauses; a lawyer, accountant, or investor might use it to define financing terms and tax consequences. The Manual features: Close to 6,000 precise definitions of legal, engineering, and tax terms (including acronyms) relating to the oil and gas industry, with definitions based--wherever possible--on actual cases; A comprehensive survey of new terms and recent colloquialisms; Annotations that include useful references to statutes, cases, books and law review articles; Entries listed in alphabetical order to easily locate a desired term; and ample cross-references to the 8-volume treatise, Williams & Meyers, Oil and Gas Law.

In the process of resolving disputes, it is not uncommon for parties to justify actions otherwise in breach of their obligations by invoking the need to protect some aspect of the elusive concept of public order. Until this thoroughly researched book, the criteria and factors against which international dispute bodies assess such claims have remained unclear. Now, by providing an in-depth comparative analysis of relevant jurisprudence under four distinct international dispute resolution systems - trade, investment, human rights and international commercial arbitration - the author of this invaluable book identifies common core benchmarks for the application of the public order exception. To achieve the broadest possible scope for her analysis, the author examines the public order exception's function, role and application within the following international dispute resolution systems: relevant World Trade Organization (WTO) agreements as enforced by the organization's Dispute Settlement Body and Appellate Body; international investment agreements as enforced by competent Arbitral Tribunals and Annulment Committees under the International Center for Settlement of Investment Disputes; provisions under the Inter-American Convention of Human Rights and the European Convention of Human Rights as enforced by the Inter-American Court of Human Rights and the European Court of Human Rights, respectively; and the New York Convention as enforced by national tribunals across the world. Controversies, tensions and pitfalls inherent in invoking the public order exception are elucidated, along with clear guidelines on how arguments may be crafted in order to enhance prospects of success. Throughout, tables and graphs systematize key aspects of the relevant jurisprudence under each of the dispute resolution systems analysed. As an immediate practical resource for lawyers on any side of a dispute who wish to invoke or strengthen a public order exception claim, the book's systematic analysis will be welcomed by lawyers active in WTO disputes, international investment arbitration, human rights law or enforcement of foreign arbitral awards. Academics and policymakers will find a signal contribution to the ongoing debate on the existence, legal basis, content and functions of the transnational public order.

**Central Asia** has emerged as potentially the most important new hydrocarbon province in decades. Among the countries whose natural resources are now the focus of world attention, Kazakhstan is very much in the front rank. The scale and strategic importance of its reserves mean that it is set to become one of the key players in the global market. Realising that potential depends on many factors, not least its legal treatment of the oil and gas industry. The contributors to this volume consider the various dimensions of that legal treatment, including investment and contractual issues, dispute settlement, transport and refining, environmental issues, and taxation. The importance of the international context for Kazakhstan's domestic law is a key feature of this book, as is a concern with identifying existing problems and suggesting the most fruitful direction for reform. The book will be of interest to practitioners and academics working in the specific field as well as in the more general area of legal relations between the oil and gas industry and transition economies. Ilias Bantekas is Reader in Law at the University of Westminster, London, UK. He has written widely in the field of international law and won the International Committee of the Red Cross Paul Reuter prize in 2000. Visiting Fellow at Harvard Law School (2003-04). John Paterson is Reader in Law at the University of Westminster, London, UK. He has written on the regulation of the oil and gas industry and acts as a consultant to the OECD Nuclear Energy Agency. Maidan Suleimenov is Professor of Law at the Kazakh State Academy of Law and Adilet Higher Law School, Almaty, Kazakhstan. He was directly involved in Kazakhstan's accession to the Energy Charter Treaty and has also been responsible for legislative drafting in the field.

This book addresses energy research from four distinct International Political Economy perspectives: energy security, governance, legal and developmental areas. Energy is too important to be neglected by political scientists. Yet, within the mainstream of the discipline energy research still remains a peripheral area of academic enquiry seeking to plug into the discipline's theoretical debates. The purpose of this book is to assess how existing perspectives fit with our understanding of social science energy research by focusing on the oil and gas dimension.

Joanne Limburg is a woman who thinks things she doesn't want to think, and who does things she doesn't want to do. As a small child, she would chew her hair all day and lie awake at night wondering if heaven had a ceiling; a few years later, when she should have been doing her homework, she was pacing her bedroom, agonising about the unfairness of lif as a woman, and the shortness of her legs. By the time she was an adult, obsessive thoughts and compulsive behaviours had come to dominate her life. She knew that something was wrong with her, but it would take many years before she understood what that something was. The Woman Who Thought Too Much follows Limburg's quest to understand her Obsessive-Compulsive Disorder and to manage her symptoms. She takes the reader on a journey through consulting rooms, libraries and internet sites, as she learns about rumination, scrupulosity, avoidance, thought-action fusion, fixed-action patterns, anal fixations, schemas, basal ganglia, tics and synapses. Meanwhile, she does her best to come to terms with an illness which turns out to be common and even - sometimes - treatable. This vividly honest memoir is a sometimes shocking, often humorous revelation of what it is like to live with so debilitating a condition. It is also an exploration of the inner world of a poet and an intense evocation of the persistence and courage of the human spirit in the face of mental illness.

Examining local content law and policy in the oil and gas industry, this book uses Nigeria as a primary case study, comparing its approach to countries such as Brazil and Norway which have also adopted local content laws in relation to their gas and oil industries. In considering various aspects of local content law and policy as they apply to the oil and gas industry, the book examines the factors behind the formulation of local content policies by petroleum producing states, and the various strategies they have employed to implement them. It analyses arguments against local content requirements from the perspective of international trade and investment law, and from liberal market economic theorists, who argue against its overall usefulness. The book highlights salient aspects of the oil and gas industry such as regulation, national oil companies, treatment of minorities, and policy formulation and implementation.
