

Polar Express, The 2016 Square 12x12 Advent (DEC15)

AN EPIC ADVENTURE THAT REVEALS MANY ANSWERS FOR THE YOUNG AND THE YOUNG-AT-HEART. Joshua the Polar Bear with his wife, Josey, and their children, Fred and Flo, find themselves in two theatres of conflict that could threaten the balance of world peace. Crazy villains and master criminals are active throughout this humorous, yet poignant and profound, story. Joshua and his family have developed extraordinary magnetic powers, including the ability to see into the future. Russia becomes the beneficiary of their abilities, and President RockovO's prodigy son, Ivan, enlists the help of the young English genius, Ethan the Enlightened One. The two boys find themselves in confrontation with Grigory Metimovich, the richest oligarch in the world, who is based in Moscow. Further help comes from another galaxy, as Joshua is able to harness energy and help from that source, along with assistance from the wealthy English entrepreneur, Rich Pickens.

As both circus performers and writers in East Germany, they are polar bears who move in human society, stars of the ring and of the literary world. In chapter one, the grandmother matriarch in the Soviet Union accidentally writes a bestselling autobiography. In chapter two, Tosca, her daughter (born in Canada, where her mother had emigrated) moves to the DDR and takes a job in the circus. Her son—the last of their line—is Knut, born in chapter three in a Leipzig zoo but raised by a human keeper in relatively happy circumstances in the Berlin zoo, until his keeper, Matthias, is taken away... Happy or sad, each bear writes a story, enjoying both celebrity and “the intimacy of being alone with my pen.”

Polar Bears in the Hot Tub is an inquiry that asks different questions about global warming and the predicted hazards. This book follows a different path of research to find answers to questions that no one is bothering to ask. Is climate change inevitable? Are we solving the wrong problem? Are Polar bears languishing in warmer and warmer arctic waters? Maybe not.

Hardly a day goes by without news of the extinction or endangerment of yet another animal species, followed by urgent but largely unheeded calls for action. An eloquent denunciation of the failures of Canada’s government and society to protect wildlife from human exploitation, Max Foran’s The Subjugation of Canadian Wildlife argues that a root cause of wildlife depletions and habitat loss is the culturally ingrained beliefs that underpin management practices and policies. Tracing the evolution of the highly contestable assumptions that define the human-wildlife relationship, Foran stresses the price wild animals pay for human self-interest. Using several examples of government oversight at the federal, provincial, and territorial levels, from the Species at Risk Act to the Biodiversity Strategy, Protected Areas Network, and provincial management plans, this volume shows that wildlife policies are as much – or more – about human needs, priorities, and profit as they are about preservation. Challenging established concepts including ecological integrity, adaptive management, sport hunting as conservation, and the flawed belief that wildlife is a renewable resource, the author compels us to recognize animals as sentient individuals and as integral components of complex ecological systems. A passionate critique of contemporary wildlife policy, The Subjugation of Canadian Wildlife calls for belief-change as the best hope for an ecologically healthy, wildlife-rich Canada.

Polar bears are truly majestic animals: the largest land-dwelling carnivore on earth, these white-furred, black-skinned giants can measure up to three meters in length and weigh up to fifteen hundred pounds. They are also iconic in other ways. They are a symbol of the climate change debate, with their survival now threatened by the loss of Arctic ice, and their images decorate fountains and the cornices of buildings across the world. They sell cold drinks. They feature in children’s books, on merry-go-rounds, and under the arms of weary toddlers heading for bed. Their pelts were once highly prized by hunters, and live captures and relocations in zoos and circuses stuffed bears still haunt museums and stately homes. In this natural and cultural history of the polar bear, Margery Fee explores the evolution, species, habitat, and behavior of the animal, as well as its portrayal in art, literature, film, and advertising. Illustrated throughout, Polar Bear will beguile anyone who loves these outside, beautiful, seemingly cuddly, yet deadly carnivores.

By skillfully explaining – with humor, brevity, and clarity – more than four hundred new, as well as often overlooked words and phrases, A Climate Vocabulary of the Future empowers readers with the information they need to both understand and act. For example, readers will learn the importance of dark snow, carbon war criminals, and negative emissions, as well as the background behind deceptively humorous phrases such – frozen chicken syndrome and robin carbon hood tax. Above all, use it to acquire the words, images, ideas, and actions necessary to thrive in a world increasingly dominated by climate chaos.

This book is dedicated to science. Scientists are skeptical, we ask: “Is that idea correct? How can I test it?” Then we resolve to gather and analyze data until we show it isn’t or it might be. If we cannot disprove the idea, it survives. No true scientist “believes in science” because he knows science is a process, a process we use to uncover the truth. One cannot have faith in science, but one can believe in the scientific process or method.

Communicating Endangered Species
Extinction, News, and Public Policy is a multidisciplinary environmental communication book that takes a distinctive approach by connecting how media and culture depict and explain endangered species with how policymakers and natural resource managers can or do respond to these challenges in practical terms. Extinction isn’t new. However, the pace of extinction is accelerating globally. The International Union for Conservation of Nature classifies more than 26,000 species as threatened. The causes are many, including climate change, overdevelopment, human exploitation, disease, overhunting, habitat destruction, and predators. The willingness and the ability of ordinary people, governments, scientists, nongovernmental organizations, and businesses to slow this deeply disturbing acceleration are uncertain. Meanwhile, researchers around the world are laboring to better understand and communicate the possibility and implications of extinctions and to discover effective tools and public policies to combat the threats to species survival. This book presents a history of news coverage of endangered species around the world, examining how and why journalists and other communicators wrote what they did, how attitudes have changed, and why they have changed. It draws on the latest research by chapter authors who are a mix of social scientists, communication experts, and natural scientists. Each chapter includes a mass media and/or cultural aspect. This book will be essential reading for students, natural resource managers, government officials, environmental activists, and academics interested in conservation and biodiversity, environmental communication and journalism, and public policy.

In a world where temperatures fluctuate and extreme weather has become commonplace, several populations have already found themselves unable to survive in their homeland. Droughts, flooding, and crop failures have caused famine, while extreme weather events like hurricanes and tornadoes have destroyed homes and, at times, whole villages. The articles in this collection examine the phenomenon of climate refugees, including the reasons they must move, the impact it has on humans and the economy, and examining the politics and other factors that affect their arrival in new countries.

Communicating Endangered Species
Extinction, News, and Public Policy is a multidisciplinary environmental communication book that takes a distinctive approach by connecting how media and culture depict and explain endangered species with how policymakers and natural resource managers can or do respond to these challenges in practical terms. Extinction isn’t new. However, the pace of extinction is accelerating globally. The International Union for Conservation of Nature classifies more than 26,000 species as threatened. The causes are many, including climate change, overdevelopment, human exploitation, disease, overhunting, habitat destruction, and predators. The willingness and the ability of ordinary people, governments, scientists, nongovernmental organizations, and businesses to slow this deeply disturbing acceleration are uncertain. Meanwhile, researchers around the world are laboring to better understand and communicate the possibility and implications of extinctions and to discover effective tools and public policies to combat the threats to species survival. This book presents a history of news coverage of endangered species around the world, examining how and why journalists and other communicators wrote what they did, how attitudes have changed, and why they have changed. It draws on the latest research by chapter authors who are a mix of social scientists, communication experts, and natural scientists. Each chapter includes a mass media and/or cultural aspect. This book will be essential reading for students, natural resource managers, government officials, environmental activists, and academics interested in conservation and biodiversity, environmental communication and journalism, and public policy.
