

Riaccendere I Motori: Innovazione, Merito Ordinario, Rinascita Italiana (I Grilli)

(Amadeus). This holistic approach to the keyboard, based on a sound understanding of the relationship between physical function and musical purpose, is an invaluable resource for pianists and teachers. Professor Fink explains his ideas and demonstrates his innovative developmental exercises that set the pianist free to express the most profound musical ideas. HARDCOVER.

In recent years we have seen a number of dramatic discoveries within the biological and related sciences. Traditional arguments such as "nature versus nurture" are rapidly disappearing because of the realization that just as we are affecting our environments, so too do these altered environments restructure our cognitive abilities and outlooks. If the biological and technological breakthroughs are promising benefits such as extended life expectancies, these same discoveries also have the potential to improve in significant ways the quality of our built environments. This poses a compelling challenge to conventional architectural theory... This is the first book to consider these new scientific and humanistic models in architectural terms. Constructed as a series of five essays around the themes of beauty, culture, emotion, the experience of architecture, and artistic play, this book draws upon a broad range of discussions taking place in philosophy, psychology, biology, neuroscience, and anthropology, and in doing so questions what implications these discussions hold for architectural design. Drawing upon a wealth of research, Mallgrave argues that we should turn our focus away from the objectification of architecture (treating design as the creation of objects) and redirect it back to those for whom we design: the people inhabiting our built environments.

This volume brings together leading experts in comparative and evolutionary psychology. Top scholars summarize the histories and possible futures of their disciplines, and the contribution of each to illuminating the evolutionary forces that give rise to unique abilities in distantly and closely related species. Emerging relatively unscathed from the banking crisis of 2008, China has been viewed as a model of both rampant success and fiscal stability. But beneath the surface lies a network of fissures that look likely to erupt into the next big financial crash. A bloated real-estate sector, roller-coaster stock market, and rapidly growing shadow-banking sector have all coalesced to create a perfect storm: one that is in danger of taking the rest of the world's economy with it. Walden Bello traces our recent history of financial crises – from the bursting of Japan’s ‘bubble economy’ in 1990 to Wall Street in 2008 – taking in their political and human ramifications such as rising inequality and environmental degradation. He not only predicts that China might be the site of the next crash, but that under neoliberalism this will simply keep happening. The only way that we can stop this cycle, Bello argues, is through a fundamental change in the ways that we organise: a shift to cooperative enterprise, respectful of the environment, and which fractures the twin legacies of imperialism and capitalism. Insightful, erudite and passionate, Paper Dragons is a must-read for anyone wishing to prevent the next financial meltdown.

"A tale of romance set over the course of about one week in 1945 in a Joseph Stalin-era Soviet prison camp."--Amazon.com.

Wisdom from the best and the brightest in the industry, this visual effects bible belongs on the shelf of anyone working in or aspiring to work in VFX. The book covers techniques and solutions all VFX artists/producers/supervisors need to know, from breaking down a script and initial bidding, to digital character creation and compositing of both live-action and CG elements. In-depth lessons on stereoscopic moviemaking, color management and digital intermediates are included, as well as chapters on interactive games and full animation authored by artists from EA and Dreamworks respectively. From preproduction to acquisition to postproduction, every aspect of the VFX production workflow is given prominent coverage. VFX legends such as John Knoll, Mike Fink, and John Erland provide you with invaluable insight and lessons from the set, equipping you with everything you need to know about the entire visual effects workflow. Simply a must-have book for anyone working in or wanting to work in the VFX industry.

Un grido si leva contro la sovranità perduta, contro le lettere da Bruxelles, i «compiti a casa» e le ingerenze di poteri lontani. L'unica strada per crescere sembra essere altro debito pubblico, l'uscita dall'euro appare non solo una minaccia credibile, ma un'eventualità percorribile. L'incauto e miope incedere tedesco minaccia di distruggere l'Europa dall'alto della propria visione del mondo, fatta di regole, parametri e percentuali. E intanto i governanti italiani, ligi e rispettosi ai dettami degli eurocrati di Bruxelles, sono conniventi col nemico. Sforare, disobbedire, alzare la voce rimane l'unica via sensata da percorrere, mentre la Germania, potenza egemone dell'Unione Europea, supremo guardiano dell'austerità, è il nostro carceriere. O forse no. Forse ci siamo raccontati la favola della Germania cattiva che ci obbliga a fare cose che ci fanno del male, perché, molto semplicemente, quelle cose non le vogliamo fare, o vogliamo scaricare altrove la responsabilità delle nostre azioni. E se la Germania, anziché il nemico fosse in realtà un gigantesco alibi? Se anziché il problema fosse la sua soluzione?

This book delivers a proactive approach to building an effective Web site that is search engine friendly and will result in better search rankings. It outlines the steps needed to bridge the gap between a Google search and a Web site, and also improve the users' experience once they get to the site. By understanding the wide variety of information-seeking strategies and the individual behaviors associated with them, this book helps information architects, Web designers/developers, SEOs/SEMs, and usability professionals build better interfaces and functionality into Web sites. Creating a satisfying user experience is the key to maximizing search effectiveness and getting conversions.

This volume aims to synthesize and situate the systematic study of discourse explicitly in the field of composition. Each chapter follows a common tri-partite structure: a description of an approach to discourse analysis; a case study using that approach; and a discussion of its value.

This report improves the evidence base on the role of Data Driven Innovation for promoting growth and well-being, and provide policy guidance on how to maximise the benefits of DDI and mitigate the associated economic and societal risks.

Time has become an increasingly important topic in urban studies and urban planning. The spatial-temporal interplay is not only of relevance for the theory of urban development and urban politics, but also for urban planning and governance. The space-time approach focuses on the human being with its various habits and routines in the city. Understanding and taking those habits into account in urban planning and public policies offers a new way to improve the quality of life in our cities. Adapting the supply and accessibility of public spaces and services to the inhabitants' space-time needs calls for an integrated approach to the physical design of urban space and to the organization of cities. In the last two decades the body of practical and theoretical work on urban space-time topics has grown substantially. The book offers a state of the art overview of the theoretical reasoning, the development of new analytical tools, and practical experience of the space-time design of public cities in major European countries. The contributions were written by academics and practitioners from various fields exploring space-time research and planning.

The Sustainable Development Report 2021 features the SDG Index and Dashboards, the first and widely used tool to assess country performance on the UN Agenda 2030 and the Sustainable Development Goals. The report analyses and outlines what needs to happen for the Decade of Action and Delivery of the SDGs. In order to build back better following the Covid-19 pandemic, especially low-income countries will need increased fiscal space. The report frames the implementation of the SDGs in terms of six broad transformations. The authors examine country performance on the SDGs for 193 countries using a wide array of indicators, and calculate future trajectories, presenting a number of best practices to achieve the historic Agenda 2030. The views expressed in this report do not reflect the views of any organizations, agency or programme of the United Nations. This title is available as Open Access on Cambridge Core.

The HyperDoc Handbook is a practical reference guide for all K-12 educators looking to transform their teaching into blended learning environments. This book strikes a perfect balance between pedagogy and how-to tips, while also providing several lesson plans to get you going using HyperDocs.

Supporting Traumatized Children and Teenagers is an accessible, comprehensive book providing an overview of the impact of trauma on children and adolescents and how they can be supported following trauma. Trauma can result from a range of experiences from bullying to witnessing violence to living through war. This book explores the different reactions children may experience, and the impact trauma can have. Variables affecting the impact of trauma are explored such as different developmental stages, gender, the reactions of friends and parents, the child's personality, and their caring environment. Appropriate and effective ways of helping children after a traumatic event are outlined, and different types of therapy, such as group therapy and cognitive behavioural therapy, are discussed. The book offers case examples and practical tips throughout, and includes a chapter on how someone working with a traumatized child can help and look after themselves. This book will be invaluable to a range of professionals working with traumatized children including counsellors, child and family social workers and therapists, as well as others involved with traumatized children such as foster carers and teachers.

This publication offers new insights into the economic theory of social economy organisations, their role in an evolving political and economic context, and the links to local development and the empowerment of users.

For more than 120 years (1714-1837) Great Britain was linked to the German Electorate, later Kingdom, of Hanover through Personal Union. This made Britain a continental European state in many respects, and diluted her sense of insular apartness. The geopolitical focus of Britain was now as much on Germany, on the Elbe and the Weser as it was on the Channel or overseas. At the same time, the Hanoverian connection was a major and highly controversial factor in British high politics and popular political debate. This volume was the first systematically to explore the subject by a team of experts drawn from the UK, US and Germany. They integrate the burgeoning specialist literature on aspects of the Personal Union into the broader history of eighteenth- and early nineteenth-century Britain. Never before had the impact of the Hanoverian connection on British politics, monarchy and the public sphere, been so thoroughly investigated.

Sapienza manifatturiera e competenza hi tech. Sta qui «la morale del torneo»: la centralità dell'industria nel nuovo equilibrio tra sviluppo sostenibile ed etica del lavoro. È un viaggio nell'universo produttivo italiano, con occhio attento soprattutto alla «grande Milano» e alle aree più sviluppate del Nord. E le parole chiave sono innovazione, qualità, ricerca, capitale umano. L'Italia, infatti, è un paese abituato «a produrre all'ombra dei campanili cose belle che piacciono al mondo». E sta ancora qui la chiave della nostra competitività: puntare sull'eccellenza industriale, legare radici nel territorio a visioni internazionali. Nelle «neofabbriche» fondate su produzione e servizi d'avanguardia, dalla meccanica alla chimica, dalla gomma all'agro-alimentare ecc, si conferma la forza d'una «cultura politecnica» che guida le migliori imprese. «Impresa è cultura», appunto.

Per crescere ancora, servono imprenditori, manager e tecnici che siano «ingegneri-filosofi», con una forte intelligenza del cuore.

We estimate the additional health spending necessary to treat COVID-19 patients. We expand a Susceptible Infected Recovered model to project the number of people requiring hospitalization, use information about healthcare costs by country, and make assumptions about capacity constraints in the health sector. Without social distancing and lockdowns, countries would need to expand health systems ten-fold, on average, to assist all COVID-19 patients in need of hospitalization. Under capacity constraints, effective social distancing and quarantine reduce the additional health spending from a range of \$0.6-1 trillion globally to \$130-231 billion, and the fatality rate from 1.2 to 0.2 percent, on average.

What is the relationship between democracy and technology? And what should that relationship be? This book explores these questions, drawing upon a wide range of philosophical, historical and sociological points of view. In stark contrast to technology's promise as a wellspring of equality, freedom and self-government, its development now poses a host of problems for political society: an alarming concentration of power over global production, a widening gap between rich and poor, multiple environmental crises, trivialization of politics in the mass media, decline of citizen competence in decision making, and the disproportionate influence of scientific and technical elites. As the writers discuss these issues, they investigate new avenues for democratic politics, possibilities that emerge as modernist ideas about progress, justice and the common good lose their ability to guide contemporary thought and action. This book will be of interest to philosophers, political scientists, those doing research on technology and society, engineers studying human factors, environmental scientists, sociologists.

Data-Driven Innovation Big Data for Growth and Well-Being

In their new work research collective Ippolita provides a critical investigation of the inner workings of Facebook as a model for all commercial social networks. Facebook is an extraordinary platform that can generate large profit from the daily activities of its users. Facebook may appear to be a form of free entertainment and self-promotion but in reality its users are working for the development of a new type of market where they trade relationships. As users of social media we have willingly submitted to a vast social, economic and cultural experiment. By critically examining the theories of Californian right-libertarians, Ippolita show the thread con- necting Facebook to the European Pirate Parties, WikiLeaks and beyond. An important task today is to reverse the logic of radical transparency and apply it to the technologies we use on a daily basis.

The demand for academic coursework and corporate training programs using the Internet and computer-mediated communication networks increases daily. The development and implementation of these new programs requires that traditional teaching techniques and course work be significantly reworked. This handbook consists of 20 chapters authored by experts in the field of teaching in the online environment to adult students enrolled in graduate university degree programs, corporate training programs, and continuing education courses. The book is organized to first lay a conceptual and theoretical foundation for implementing any online learning program. Topics such as psychological and group dynamics, ethical issues, and curriculum design are covered in this section. Following the establishment of this essential framework are separate sections devoted to the practical issues specific to developing a program in either an academic or corporate environment. Whether building an online learning program from the ground up or making adjustments to improve the effectiveness of an existing program, this book is an invaluable resource.--From Amazon.

Provides instructions for creating a variety of home accents, accessories, and toys that combine crafting and technology.

L'industria italiana sta ragionando su cosa fare per superare la terribile caduta provocata dall'epidemia. Alla precedente e meno grave crisi globale del 2008, l'industria aveva risposto con nuove tecnologie, prodotti, riorganizzazione delle fabbriche, acquisizioni e fusioni. Aveva recuperato solo in parte. Con poca guida di politica industriale. Già prima dell'epidemia, il quadro generale stava cambiando. Stava finendo l'era della globalizzazione. La quarta rivoluzione industriale divampava. In Italia, l'occupazione non soffriva numericamente, ma il lavoro si era dequalificato. La fermata del mondo nella primavera del 2020 ha drammatizzato le cose. Sarà difficile per le imprese rispondere a questa caduta con le proprie forze. Sarà erosa la loro liquidità, ma il problema non è finanziario, cioè non si risolve con i soldi pubblici. Il problema è strategico ed esistenziale. Il digitale faciliterebbe il trasferimento tecnologico alle imprese anche piccole e consentirebbe loro di partecipare al progresso. Ma l'Italia è molto indietro anche in questo. Per investire in competenze, ritrovare il valore del merito, recuperare posizioni nel ranking mondiale, occorrerebbero un progetto Competitività serio e di legislatura, e uno qui definito Missionari tecnologici. Con questo volume Sapienza, Università di Roma, offre il suo contributo sociale, culturale ed economico. Il volume è stato curato da Riccardo Gallo, con i contributi di Daniela Addressi, Roberto Adrower, Giuseppe Bonifazi, Marco Bravi, Mario Calabrese, Cinzia Capalbo, Alessandro Corsini, Antonio d'Alessandro, Paolo De Filippis, Luca Di Palma, Fabio M.

Frattale Mascioli, Riccardo Gallo, Damiano Garofalo, Carlo Martino, Franco Medici, Francesco Napolitano, Cristiana Piccioni, Daniela Pilone, Massimo Pompili, Antonello Rizzi, Aldo Roveri, Nicola Roveri, Giovanni Solimine.

Space–Time Design of the Public City

The European Union and the single currency have given Europe more stability than it has known in the past thousand years, yet Europe seems to be in perpetual crisis about its global role. The many European empires are now reduced to a multiplicity of ethnicities, traditions, and civilizations. Europe will never be One, but to survive as a union it will have to become a federation of “islands” both distinct and connected. Though drawing on philosophers of Europe’s past, Cacciari calls not to resist Europe’s sunset but to embrace it. Europe will have to open up to the possibility that in few generations new exiles and an unpredictable cultural hybridism will again change all we know about the European legacy. Though scarcely alive in today’s politics, the political unity of Europe is still a necessity, however impossible it seems to achieve.

The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.--Publisher's description.

Today's students need to be fully prepared for successful learning and living in the information age. This book provides a practical, flexible framework for designing Guided Inquiry that helps achieve that goal.

I commercialisti che vogliono innovare possono contare sulla formazione giuridico economica e sulla capacità di implementare soluzioni organizzative e adeguamenti tecnici in tempi rapidi, grazie al rapporto personalizzato con le imprese clienti. Il comparto professionale risente di un contesto economico profondamente mutato. È giunto il momento di ripensare a fondo la professione economica. I commercialisti che vogliono innovare possono contare sulla formazione giuridico economica e sulla capacità di implementare soluzioni organizzative e adeguamenti tecnici in tempi rapidi, grazie al rapporto personalizzato con le imprese clienti. Oggi l'imprenditore non si aspetta più dal suo consulente solo la pianificazione fiscale e il controllo degli adempimenti formali. È alla ricerca di suggerimenti che gli possano garantire la sopravvivenza ed è per questo disposto a investire in consulenza. Il commercialista 2.0 deve fare leva sull'innovazione. Prendendo spunto dal metodo Jugaad si propone una chiave di lettura su come potrebbe evolvere la professione di commercialista, oggi ancora legata - per oltre il novanta per cento degli esercenti e per il sessanta per cento del fatturato - alle attività di base della contabilità e della consulenza fiscale. Per puntare a nuovi servizi da fornire alle PMI, naturale bacino d'utenza dei commercialisti. Prefazione di Gerardo Longobardi, Presidente del CNDCEC. This book examines the energy dimension of the smart city from the perspective of urban planning, providing a complete overview that ranges from theoretical aspects to practical considerations and projects. In addition, it aims to illustrate how the concept of the smart city can enhance understanding of the urban system and foster new forms of management of the metropolis, including with respect to energy supply and use. Specifically, the book explores the different dimensions of the relationship between energy and the city, discusses methodological issues with a special focus on ontological approaches to sustainability, and describes practices, tools, and good examples of energy-related urban planning. The authors represent the main Italian research groups working in the field, Italy being an excellent example of a country exposed to energy problems due to, for example, vulnerability to climate change and lack of primary energy resources. This book will be valuable for students of urban planning, town planners, and researchers interested in understanding the changing nature of the city and the challenges posed by energy issues.

"Digitisation is fundamentally transforming our entire economy and our society. The datafication of business processes leads to an incredibly fast and ever increasing mass of data. Such data is the blood in the veins of the digital economy. Many existing and future business models, which will drive innovation and create economic growth, depend on being able to use this data. Trading Data in the Digital Economy is therefore a central aspect of the development of the EU Digital Market. In continuing with the aim of the 'Münster Colloquia on Digital Law and the EU Economy', this book examines the 'Legal Concepts and Tools' with a view to determining how EU law should react to the challenges and needs of this aspect of the digital economy. This volume is a collection of contributions to the 3rd Münster Colloquium, held on 4-5 May 2017 in Münster, Germany. The colloquium analysed the academic, practice-based, and political aspects of the various legal concepts and tools surrounding the trade in data. More specifically, the volume focuses on the starting points and challenges, exclusivity rights, compulsory licences, and contractual concepts."--Bloomsbury Publishing.

This volume, first published in 2006, presents findings on climate change from leading international scientists, for researchers, policy-makers and engineers.

What was the role of merchant guilds in the medieval and early modern economy? Does their wide prevalence and long survival mean they were efficient institutions that benefited the whole economy? Or did merchant guilds simply offer an effective way for the rich and powerful to increase their wealth, at the expense of outsiders, customers and society as a whole? These privileged associations of businessmen were key institutions in the European economy from 1000 to 1800. Historians debate merchant guilds' role in the Commercial Revolution, economists use them to support theories about institutions and development, and policymakers view them as prime examples of social capital, with important lessons for modern economies. Shellagh Ogilvie's magisterial new history of commercial institutions shows how scrutinizing merchant guilds can help us understand which types of institution made trade grow, why institutions exist, and how corporate privileges affect economic efficiency and human well-being.

Guided Inquiry Design®: A Framework for Inquiry in Your School

Ball milling has emerged as a powerful tool over the past few years for effecting chemical reactions by mechanical energy. Allowing a variety of reactions to occur at ambient temperatures and in solvent-free conditions, ball milling presents a greener route for many chemical processes. Compared to the use of microwave and ultrasound as energy sources for chemical reactions, ball milling is not as familiar to chemists and yet it holds great potential. This book will introduce practicing chemists to the technique and will highlight its importance for green transformations. Current applications of ball milling will be covered in detail as well as its origin, recent developments and future scope, challenges and prospects. Chemical transformations covered include carbon-carbon and carbon-heteroatom bond formation, oxidation by solid oxidants, asymmetric organo-catalytic reactions, dehydrogenative coupling, peptide syntheses and polymeric material syntheses. The book will provide a valuable guide for organic, inorganic and organometallic chemists, material scientists, polymer scientists, reaction engineers and postgraduate students in chemistry.

This book offers an overview of sustainability and urban mobility in the context of urban planning - topics that are of considerable interest in the development of smart cities. Environmental sustainability is universally recognized as a fundamental condition for any urban policy or urban management activity, while mobility is essential for the survival of complex urban systems. The new opportunities offered by innovations in the mobility of people, goods and information, as well as radically changing interactions and activities are transforming cities. Including contributions by urban planning scholars, the book provides an up-to-date picture of the latest studies and innovative policies and practices in Italy, of particular interest due to its spatial, functional and social peculiarities. Sustainability and mobility must form the basis of "smart planning" - a new dimension of urban planning linked to two main innovations: procedural innovation in the management of territorial transformations and the technological innovation of the generation, processing and distribution of data (big data) for the creation of new "digital environments" such as GIS, BIM, models of augmented and mixed reality, useful for describing changes in human settlement in real time.
