New York Times
Bestseller What
happens when you
eat an apple? The
answer is vastly more
complex than you
imagine. Every apple
contains thousands
of antioxidants
whose names,
beyond a few like
vitamin C, are
unfamiliar to us, and
each of these

powerful chemicals has the potential to play an important role in supporting our health. They impact thousands upon thousands of metabolic reactions inside the human body. But calculating the specific influence of each of these chemicals isn't nearly sufficient to explain

the effect of the
apple as a whole.

Because almost every

chemical can affect

every other chemical,

there is an almost

infinite number of

possible biological

consequences. And

that's just from an

apple. Nutritional
