

Trade The Ratio: The Precious Metal Investors' Guide To Trading The Silver To Gold Ratio For Optimal Gains

"While many dictionaries of economics are available for purchase, this title is unique because of its greater depth of treatment. It offers histories and backgrounds on a significant number of economic topics, not only for the United States but also for other countries and geographic regions. Entries cover such topics as economic concepts; markets and industries; economic development in various countries; biographical essays on key people in economics and business; business products, including coffee, gas, and oil; and the economic aspects of historical events and time periods, including the Great Depression."—*"The Top 20 Reference Titles of the Year," American Libraries*, May 2004.

What were the economic roots of modern industrialism? Were labor unions ever effective in raising workers' living standards? Did high levels of taxation in the past normally lead to economic decline? These and similar questions profoundly inform a wide range of intertwined social issues whose complexity, scope, and depth become fully evident in the Encyclopedia. Due to the interdisciplinary nature of the field, the Encyclopedia is divided not only by chronological and geographic boundaries, but also by related subfields such as agricultural history, demographic history, business history, and the histories of technology, migration, and transportation. The articles, all written and signed by international contributors, include scholars from Europe, Latin America, Africa, and Asia. Covering economic history in all areas of the world and segments of economies from prehistoric times to the present, *The Oxford Encyclopedia of Economic History* is the ideal resource for students, economists, and general readers, offering a unique glimpse into this integral part of world history.

Precious metals (gold, silver, and platinum) have become an important part of investment portfolios for individuals as well as for institutions. A key question is whether investors should actively trade these metals to time the market or whether they should take a buy-and-hold strategy. This paper examines the weak-form efficiency of precious metals markets with this question in mind, using the automatic portmanteau and variance ratio tests. It is found that return predictability of these markets has been changing over time, depending on prevailing economic and political conditions. The return predictability of gold and silver markets has been showing a downward trend, implying that the degree of the weak-form efficiency of these markets have been gradually improving. In particular, the gold market has been highly efficient recently, showing the highest degree of market efficiency among the three precious metals markets. The overall evidence suggest an buy-and-hold strategy, but profit opportunities may arise from time to time depending on prevailing economic or political conditions.

The Enlightenment was a time of monetary turmoil and transformation in Europe. Change began with a riot of experimentation, including novel ideas about human agency and capacity to promote economic progress, efforts to reframe divinity in terms (like the providential) compatible with market exchange, new instruments of credit, and innovative institutions such as national banks and capital markets. Europeans, including the settler societies in North America, improvised frantically; people faced the task of everyday exchange in changing media; governments took up the project of creating currencies that supported their political power; artists and writers raced to represent new forms of wealth and interpret the issues they raised; and intellectuals struggled to conceptualize, and tame, patterns of monetary transformation. The result was a rich debate, still unsettled, about the sources of value, the morality of the market, and the very nature of money. Drawing upon a wealth of visual and textual sources, A Cultural History of Money in the Age of Enlightenment presents essays that examine key cultural case studies of the period on the themes of technologies, ideas, ritual and religion, the everyday, art and representation, interpretation, and the issues of the age.
