Scientist, fitness champion, and founder of Gauge Girl Training Christine Hronec shares a customizable plan to lose weight and shed fat by eating according to your macro type, a profile based on your body type and personal carb tolerance. Unlock your macro type and end the battle with the scale—for good. One-size-fits-all diets don't work, and neither does counting calories alone. Biochemical Engineer and fitness expert Christine Hronec has discovered that the key to fat loss and feeling your best is eating the optimum ratio of macronutrients—protein, carbohydrates, and fat—for your unique body. Through years of coaching and research, Hronec has pinpointed five macro types, a bio-individual nutritional blueprint based on your body type and carb tolerance. Rooted in science and backed by real-world results, Unlock Your Macro Type reveals: The secret code of fat, and why you need to eat fat to burn fat Why drastic carb-cutting can backfire for many macro types The essential macronutrient most people don't get enough of each day The single biggest factor that dictates how to eat for your macro type Complete with quizzes and tailor-made menus, recipes, and workouts, Hronec's personalized plan is designed to get you the best results based on your body, your metabolism, and your goals.

Why is it so hard to make lasting changes in our companies, in our communities, and in our own lives? The primary obstacle is a conflict that's built into our brains, say Chip and Dan Heath, authors of the critically acclaimed bestseller Made to Stick. Psychologists have discovered that our minds are ruled by two different systems - the rational mind and the emotional mind—that compete for control. The rational mind wants a great beach body; the emotional mind wants that Oreo cookie. The rational mind wants to change something at work; the emotional mind loves the comfort of the existing routine. This tension can doom a change effort - but if it is overcome, change can come quickly. In Switch, the Heaths show how everyday people - employees and managers, parents and nurses - have united both minds and, as a result, achieved dramatic results:

- The lowly medical interns who managed to defeat an entrenched, decades-old medical practice that was endangering patients
- The home-organizing guru who developed a simple technique for overcoming the dread of housekeeping
- The manager who transformed a lackadaisical customer-support team into service zealots by removing a standard tool of customer service

In a compelling, story-driven narrative, the Heaths bring together decades of counterintuitive research in psychology, sociology, and other fields to shed new light on how we can effect transformative change. Switch shows that successful changes follow a pattern, a pattern you can use to make the changes that matter to you, whether your interest is in changing the world or changing your waistline.

This book provides the most comprehensive treatment to date of microeconometrics, the analysis of individual-level data on the economic behavior of individuals or firms using regression methods for cross section and panel data. The book is oriented to the practitioner. A basic understanding of the linear regression model with matrix algebra is assumed. The text can be used for a microeconometrics course, typically a second-year economics PhD course; for data-oriented applied microeconometrics field courses; and as a reference work for graduate students and applied researchers who wish to fill in gaps in their toolkit. Distinguishing features of the book include emphasis on nonlinear models and robust inference, simulation-based estimation, and problems of complex survey data. The book makes frequent use of numerical examples based on generated data to illustrate the key models and methods. More substantially, it systematically integrates into the text empirical illustrations based on seven large and exceptionally rich data sets.

The loss of hearing - be it gradual or acute, mild or severe, present since birth or acquired in older age - can have significant effects on one's communication abilities, quality of life, social participation, and health. Despite this, many people with hearing loss do not seek or receive hearing health care. The reasons are numerous, complex, and often interconnected. For some, hearing health care is not affordable. For others, the appropriate services are difficult to access, or individuals do not know how or where to access them. Others may not want to deal with the stigma that they and society may associate with needing hearing health care and obtaining that care. Still others do not recognize they need hearing health care, as hearing loss is an invisible health condition that often worsens gradually over time. In the United States, an estimated 30 million individuals (12.7 percent of Americans ages 12 years or older) have hearing loss. Globally, hearing loss has been identified as the fifth leading cause of years lived with disability. Successful hearing health care enables individuals with hearing loss to have the freedom to communicate in their environments in ways that are culturally appropriate and that preserve their dignity and function. Hearing Health Care for Adults focuses on improving the accessibility and affordability of hearing health care for adults of all ages. This study examines the hearing health care system, with a focus on non-surgical technologies and services, and offers recommendations for improving access to, the affordability of, and the quality of hearing health care for adults of all ages.

Agile Data Warehouse Design is a step-by-step guide for capturing data warehousing/business intelligence (DW/BI) requirements and turning them into high performance dimensional models in the most direct way: by modelstorming (data modeling] brainstorming) with BI stakeholders. This book describes BEAM, an agile approach to dimensional modeling, for improving communication between data warehouse designers, BI stakeholders and the whole DW/BI development team. BEAM provides tools and techniques that will encourage DW/BI designers and developers to move away from their keyboards and entity relationship based tools and model interactively with their colleagues. The result is everyone thinks dimensionally from the outset! Developers understand how to efficiently implement dimensional modeling solutions. Business stakeholders feel ownership of the data warehouse they have created, and can already imagine how they will use it to answer their business questions. Within this book, you will learn: Agile dimensional modeling using Business Event Analysis & Modeling (BEAM) Modelstorming: data modeling that is quicker, more inclusive, more productive, and frankly more fun! Telling dimensional data stories using the 7Ws (who, what, when, where, how many, why and how) Modeling by example not abstraction; using data story themes, not crow's feet, to describe detail Storyboarding the data warehouse to discover conformed dimensions and plan iterative development Visual modeling: sketching timelines, charts and grids to model complex process measurement - simply Agile design documentation: enhancing star schemas with BEAM dimensional shorthand notation Solving difficult DW/BI performance and usability problems with proven dimensional design patterns LawrenceCorr is a data warehouse designer and educator. As Principal of DecisionOne Consulting, he helps clients to review and simplify their data warehouse designs, and advises vendors on visual data modeling techniques. He regularly teaches agile dimensional modeling courses worldwide and has taught dimensional DW/BI skills to thousands of students. Jim Stagnitto is a data warehouse and master data management architect specializing in the healthcare, financial services, and information service industries. He is the founder of the data warehousing and data mining consulting firm Llumino.

Gain the plant-based advantage! Join the thousands of runners, bodybuilders, and athletes from virtually every sport who rely on foods and beverages made without animal products. Every day an increasing number of athletes, even those who are not fully vegetarian or vegan, incorporate a plant-based diet when training or recovering from competition. In Plant-Based Sports Nutrition, registered Ruscigno combine decades of evidence-based research with personal experience working with—and as—vegan and vegetarian athletes to offer you a reliable and complete explanation of how, when, and why you need to plan your nutrient intake to maximize nutrition and get the best results. They will help you make smart decisions about properly fueling your body so you have the energy and strength to compete. Learn how to get proper amounts of all essential macronutrients, vitamins, and minerals, taking into account your personal caloric needs. Draw inspiration from athletes who share how they succeed in their sports while following a plant-based way of eating. Enjoy plenty of recipes to use for training, event, and everyday nutrition needs and utilize the tailored meal plans and training nutrient timing and relative energy deficiency syndrome (RED-S) as well as how to meet protein and amino acid requirements while doing light, moderate, or intense training for your sport. Get information on keto diets, tips for optimizing bone health and iron intake, and instructions for making your own fluid-replacement beverage. Whether you are a dedicated vegetarian or vegan looking to add
