Sea-going plants will be plants that have adjusted to living in amphibian conditions (saltwater or freshwater). They are likewise alluded to as hydrophytes or macrophytes to recognize them from green growth and other microphytes. A macrophyte is a plant that fills in or close to water and is either emanant, submergent, or gliding. In lakes and streams macrophytes give cover to fish, substrate for amphibian spineless creatures, produce oxygen,

and swim by means of fins is the author's lead-in to the first chapter called "What are Fish?" Alderton builds the reader's confidence by providing solid information about what fish are anatomically speaking, how they evolved, how they breathe, how they move, where they live, and how they behave. The new fancier's aquarium begins in chapter two with instructions on setting up the tank, including selecting the right size, figuring out how many fish, setting the tank, equipment, substrate, heating, lighting, filtrations, plants, water chemistry, assembly, and more. Choosing the freshwater fishes that appeal to the reader is the subject of "Introducing the Categories of Fish," which schools readers in seven categories: Cyprinids (e.g., goldfish, minnows, and barbs), Characins (e.g., tetras), Cichlids

(e.g., oscars, angelfish, and discus), Anabantoids (gouramis, bettas/Siamese fighting fish, and paradise fish), Toothcarps (guppies, swordtails, platies, black mollies, and killifish), Catfish, and others (loaches and Chinese algae eaters). The purchasing, maintenance, and feeding of fish are described in considerable details, and the author gives a basic overview of breeding and keeping fish healthy as well. Resources, glossary, and index conclude the book.

It's amazing how much conversation can take place between a two-year old and an aquarium. Let the kids name the fish. Have discussions and ask questions like, what color is that fish? tank mates that could turn into a different type of learning experience altogether. This doesn't necessarily have to be a bad thing; you just have to be prepared for it. After all, kids do have to learn about the cycle of life and death somehow. It would certainly be a lot easier to cope with the death of goldfish as a child's first loss, rather than a human family member. In these times of having five hundred plus cable channels and excessive video games, an aquarium can be a refreshing touch to a home. The next time you sit down for a family dinner; try looking at the aquarium instead of the television. You never know, it may just start an actual conversation.
