The Cambridge Companion to Historical Archaeology provides an overview of the international field of historical archaeology (c.AD 1500 to the present) through seventeen specially-commissioned essays from leading researchers in the field. The volume explores key themes in historical archaeology including documentary archaeology, the writing of historical archaeology, colonialism, capitalism, industrial archaeology, maritime archaeology, cultural resource management and urban archaeology. Three special sections explore the distinctive contributions of material culture studies, landscape archaeology and the archaeology of buildings and the household. Drawing on case studies from North America, Europe, Australasia, Africa and around the world, the volume captures the breadth and diversity of contemporary historical archaeology, considers archaeology's relationship with history, cultural anthropology and other periods of archaeological study, and provides clear introductions to alternative conceptions of the field. This book is essential reading for anyone studying or researching the material remains of the recent past.

This edited volume gathers contributions focused on understanding the environment through the lens of Historical Archaeology. Pressing issues such as climate change, global warming, the Anthropocene and loss of biodiversity have pushed scholars from different areas to examine issues related to the causes, processes, and consequences of these phenomena. While traditional barriers between natural and social sciences have been torn down, these issues have gradually occupied a central place in the field of anthropology. As archaeology involves the transdisciplinary study of cultural and natural evidence related to the past, it is in a privileged position to discuss the historical depth of some of the processes related to environment that are deeply affecting the world today. This volume brings together substantial and comprehensive contributions to the understanding of the environment in a historical perspective along three lines of inquiry: Theoretical and methodological approaches to the environment in Historical Archaeology Studies on environmental Historical Archaeology Historical Archaeology and the Anthropocene Historical Archaeology and Environment will be of interest to researchers in both social and environmental sciences, working in different disciplines and research areas, such as archaeology, history, geography, anthropology, climate change studies, environmental analysis and sustainable development studies.

In line with the resurgence of interest in the history of archaeology manifested over the past decade, this volume aims to highlight state-of-the-art research across several topics and areas, and to stimulate new approaches and studies in the field. With their shared historiographical commitment, the authors, leading scholars and emerging researchers, draw from a wide range of case studies to address major themes such as historical sources and methods; questions of archaeological practices and the practical aspects of knowledge production; 'visualizing archaeology' and the multiple roles of iconography and imagery; and 'questions of identity' at local, national and international levels.

Brief History of Archaeology

The History of Archaeology: An Introduction provides global coverage with chapters devoted to particular regions of the world. The regional approach allows readers to understand the similarities and differences in the history of and approach to archaeology in various parts of the world. Each chapter is written by a specialist scholar with experience of the region concerned. Thus the book focuses on the earliest beginnings of archaeology in different parts of the world, and how it developed from being a pastime for antiquarians and collectors to a serious attempt to obtain information about past societies. Woven into the text are various boxes that explore key archaeologists, sites and important discoveries in the history of archaeology enriching the story of the discipline’s development. With such far ranging coverage, including an exploration of the little covered development of Russian and Chinese archaeology, The History of Archaeology is the perfect introduction to the history of archaeology for the interested reader and student alike.

Archaeology in the Making is a collection of bold statements about archaeology, its history, how it works, and why it is more important than ever. This book comprises conversations about archaeology among some of its notable contemporary figures. They delve deeply into the questions that have come to fascinate archaeologists over the last forty years or so, those that concern major events in human history such as the origins of agriculture and the state, and questions about the way archaeologists go about their work. Many of the conversations highlight quite intensely held personal insight into what motivates us to pursue archaeology; some may even be termed outrageous in the light they shed on the way archaeological institutions operate – excavation teams, professional associations, university departments. Archaeology in the Making is a unique document detailing the history of archaeology in second half of the 20th century to the present day through the words of some of its key proponents. It will be invaluable for anybody who wants to understand the theory and practice of this ever developing discipline.

The Routledge Handbook of Global Historical Archaeology is a multi-authored compendium of articles on specific topics of interest to today’s historical archaeologists, offering perspectives on the current state of research and collectively outlining future directions for the field. The broad range of topics covered in this volume allows for specificity within individual chapters, while building to a cumulative overview of the field of historical archaeology as it stands, and where it could go next. Archaeological research is discussed in the context of current sociological concerns, different approaches and techniques are assessed, and potential advances are posited. This is a comprehensive treatment of the sub-discipline, engaging key contemporary debates, and providing a series of specially-commissioned geographical overviews to complement the more theoretical explorations. This book is designed to offer a starting point for students who may wish to pursue particular topics in more depth, as well as for non-archaeologists who have an interest in historical archaeology. Archaeologists, historians, preservationists, and all scholars interested in the role historical archaeology plays in illuminating daily life during the past five centuries will find this volume engaging and enlightening.

Considering the literary dimension of the earliest text history of Samuel, this volume asks the question if the comparative analysis of the textual witnesses permit proving the existence of distinct literary editions and identifying the ideological motives that governed the possible modification of the text.

In the spring of 1874 a handful of men and one women set out for the Texas Panhandle to seek their fortunes in the great buffalo hunt. Moving south to follow the herds, they intended to establish a trading post to serve the hunter, or “hide men.” At a place called Adobe Walls they dug blocks from the sod and built their center of operations After operating for only a few months, the post was attacked one sultry June morning by angry members of several Plains Indian tribes, whose physical and cultural survival depending on the great bison herd that were rapidly shrinking before the white men’s guns. Initially defeated, that attacking Indians retreated. But the defenders also retreated leaving the deserted post to be burned by Indians intent on erasing all traces of the white man’s presence. Nonetheless, tracing did remain, and in the ashes and dirt were buried minute details of the hide men’s lives and the battle that so suddenly changed them. A little more than a century later white men again dug into the sod at Adobe Walls. The nineteenth-century men dug for profits, but the modern hunters were looking for the natural time capsule inadvertently left by those earlier adventurers. The authors of this book, a historian and an archeologists, have dug into the sod and into far-flung archives to sift reality form the long-romanticized story of Adobe Walls, its residents, and the Indians who so fiercely resented their presence. The full story of Adobe Walls now tells us much about the life and work of the hide men, about the dying of the Plains Indian culture, and about the march of white commerce across the frontier.

This volume is the first to offer an in-depth look at historical archaeology, public history, and reconstruction in Williamsburg through a comprehensive range of sites, topics, and analyses. Uniquely combining a historical landscape and a large town museum complex, Colonial Williamsburg has deeply influenced the discipline for 100 years through one of the nation’s longest continuously running archaeological conservation programs. Historical Archaeology in the Twenty-First Century illuminates the town’s history as an early capital of the Virginia Colony and home to the College of William & Mary. In the 1700s, Williamsburg was a center of political, cultural, and commercial life where people of African, European, and Native American descent interacted regularly. The case studies in this volume cover topics including animal husbandry, the oyster industry, architectural reconstruction, window leads, and an apothecary’s display skeleton. Contributors draw attention to the interactions between enslaved and free communities as well as African American burial practices. Using exemplary approaches and methodologies, this volume addresses key concerns in the field such as amplifying voices of the African diaspora, the development of ethically sound inclusive archaeologies, the value of environmental analyses, and the advantages of virtual models. The research highlighted here provides state-of-the-art examples of how historical archaeology can be used to inform, engage, and educate.

This short account of the discipline of archaeology tells of spectacular discoveries and the colorful lives of the archaeologists who made them, as well as of changing theories and current debates in the field. Spanning over two thousand years of early digs as well as covering the development of archaeology as a multidisciplinary science, the modernization of meticulous excavation methods during the twentieth century, and the important discoveries that led to new ideas about the past, *A Brief History of Archaeology* is a vivid narrative that will engage readers who are new to the discipline, drawing on the authors’ extensive experience in the field and classroom. Early research at Stonehenge in Britain, burial mound excavations at Herculaneum and Pompeii culminate in the nineteenth century debates over human antiquity and the theory of evolution. The book then moves on to the discovery of the world’s pre-industrial civilizations in Egypt, Mesopotamia, and Central America.

Excavations at Troy and Mycenae, the Royal Burials at Ur, Iraq, and the dramatic finding of the pharaoh Tutankhamun in 1922. The book concludes by considering recent sensational discoveries, such as the Lords of Sipán in Peru, and exploring processual and postprocessual theory which have intrigued archaeologists in the early 21st century. The second edition updates this respected introduction to one of the sciences’ most fascinating disciplines. Landlord villages dominated Iranian land tenure for hundreds of years, whereby one powerful landlord owned the village structures, surrounding farmland, and to all intents and purposes, the village occupants themselves, a system that in some places place up to the 1979 Islamic Revolution. In Oman, mud-brick oases were home to most of the rural population right up until Sultan Qaboos came to power in 1970, and required inhabitants of mud-brick houses to relocate into new concrete houses.

Archaeology and Heritage in the Middle East explores these everyday, rural communities in Iran and Oman in the 19th and 20th centuries, through a combination of building analysis, excavation, artefact analysis and ethnographic interviews. Drawing on a range of original field projects, the book considers new ways of exploring traditional lifeways, giving voice to hitherto largely ignored sections of the population, and offers new and different ways of thinking about how these people lived and what they valued. The impact of major political and social changes on them. Place, memory and belonging are considered through the lens of material culture within these villages. The first of its kind, the book brings together methodologies, research questions, and case studies that have been used or addressed in the Middle East. Helping to establish historical archaeology in the Middle East and providing new ways in which the memorable, quotidian past can be exploited for its social and economic value in contemporary contexts, *Archaeology and Heritage in the Middle East* is an ideal resource for students, scholars and practitioners of historical archaeology and heritage of and in the Middle East.

The thrilling history of archaeological adventure, with tales of danger, debate, audacious explorers, and astonishing discoveries around the globe What is archaeology? The word may bring to mind images of golden pharaohs and lost civilizations, but it is also the study of skulls and Ice Age cave art. Archaeology is all of these, but also far more: the only science to encompass the entire span of human history—more than three million years! This Little History tells the riveting stories of some of the great archaeological discoveries around the globe: ancient Egyptian tombs, Mayan ruins, the first colonial settlements at Jamestown, mysterious Stonehenge, the incredibly preserved Pompeii, and many, many more. In forty brief, exciting chapters, the book records the development from its eighteenth-century origins to its twenty-first-century technological advances, including remote sensing capabilities and satellite imagery techniques that have revolutionized the field. Shining light on the most intriguing archaeological field, this absolutely up-to-date book illuminates archaeology’s controversies, discoveries, heroes and scoundrels, global sites, and newest methods for curious readers of every age.

The Art and Mystery of Historical Archaeology is essential reading for anyone concerned with the past. In it, archaeologists write of "revolutions of the imagination," and wrest secrets from old objects to recreate our multi-cultured heritage. Material culture is focal-large cities, small potsherds, big and little bones. The book is interdisciplinary and goes inside the process of artifact interpretation to reveal how artifacts "talk" about people. The emphasis is context, ethnography, ordinary and extraordinary men, women, and children. Here is local history in material form as well as stories of global expansion and culture contact. The book draws on the seminal influence of James Deetz's work on American culture and merges history, folklore, anthropology, African-American, Native American, and gender studies. The essays illustrate the power and potency of folk beliefs and how myths of the past are constantly remade. The authors show how people use objects to converse about themselves, their worlds, and relationships with others. They examine messages writ on brick and stone, buried in earth and passed in legend. They then demonstrate how archaeologists, historians, museologists, and students of material culture can read these to bring the past to light.

In battle at Culloden Moor on 16 April 1746 the Jacobite cause was dealt a mortal blow. The power of the Highland clans was broken. And the image of sword-wielding Highlanders charging into a hail of lead delivered by the red-coated battalions of the Hanoverian army has passed into legend. The battle was decisive—it was a turning point in British history. And yet our perception of this critical episode tends to be confused by mistaken, sometimes partisan views of the events on the battlefield. So, what really happened at Culloden? In this fascinating and original book, a team of leading historians and archaeologists reconsiders every aspect of the battle. They examine the latest historical and archaeological evidence, question every assumption, and rewrite the story of the campaign in vivid detail. This is the first time that such a distinguished team of experts has focused on a single British battle. The result is a seminal study of the subject, and it is a landmark publication of battlefield archaeology.

The development of archaeological thought is analyzed by examining archaeological history to determine to what extent its trends reflect the personal & collective interests of archaeologists.

This volume forms a collection of papers tracking the emergence of the history of archaeology from a subject of marginal status in the 1980s to the mainstream subject which it is today. Professor Timothy Murray's essays have been widely cited and track over 20 years in the development of the subject. The papers are accompanied by a new introduction which surveys the development of the subject over the last 25 years as well as a reflection of what this means for the philosophy of archaeology and theoretical archaeology.This volume spans Tim's successful career as an academic at the forefront of the study of the history of archaeology, both in Australia and internationally.

During his career he has held posts in Britain and Europe as well as Australia. He has edited The Bulletin of the History of Archaeology since 2003.

What do walking, weaving, observing, storytelling, singing, drawing and writing have in common? The answer is that they all proceed along lines. In this extraordinary book Tim Ingold imagines a world in which everyone and everything consists of interwoven or interconnected lines. He offers us a new way of thinking about the foundations for a completely new discipline: the anthropological archaeology of the line. Ingold's argument leads us through the music of Ancient Greece and contemporary Japan, Siberian labyrinths and Roman roads, Chinese calligraphy and the printed alphabet, weaving a path between the past and the present. Drawing on a multitude of disciplines including archaeology, classical studies, art history, linguistics, psychology, musicology, philosophy and many others, and including more than seventy illustrations, this book takes us on an exhilarating intellectual journey that shows us how we look at the world and how we go about in it. This Routledge Classics edition includes a new preface by the author.

From ancient holy sites, to buried relics and treasures, National Geographic uncovers the history and the archaeological discoveries from Scripture and the biblical world. Richly illustrated and written from an objective and nondenominational perspective, author Jean-Pierre Isboux offers a scientific and archaeological discoveries to place biblical stories in the framework of human history. Chapters, beginning with the dawn of human civilization and ending with present day and the future of archaeology, chronicle hundreds of sites and artifacts found in Sumer, Babylon, and the Temple, along the route of the Exodus, and in many other regions across the Middle East. Timelines bridge hundreds of years and several empires, maps give readers a visual sense of location, while hundreds of photos and illustrations of rare artifacts and ancient places add to the richness of the text. The book concludes with details of what remains to be found and the evolving dynamic of biblical faith in an increasingly scientific world in which archaeologists make daily breakthroughs.

Experienced archaeologist Dr. David E. Graves has assembled a helpful introduction and brief history of biblical archaeology written for undergraduate students to provide a foundation for the discoveries presented in the companion volumes of The Archaeology of the New Testament and The Archaeology of the Old Testament. Chapters include: Brief History of Biblical Archaeology, Understanding Dates in Archaeology, Characteristics of Archaeology, The Role of Archaeology in Biblical Studies, Limitations of Archaeology, Controversy in Biblical Archaeology, Archaeological Excavation: How Its Done. The history of archaeology is filled with, espionage, romance, diplomacy, and intrigue and fascinating to see how artifacts were first discovered and recovered. This insightful book will: · Illustrate archaeological finds with more than 50 pertinent color photographs ·

map and carefully crafted charts- Include a glossary defining technical archaeological terms- Provide extensive footnotes and bibliography for future study- Include a detailed subject index This is an accessible introduction to biblical archaeology intended for laypeople who want to know the history of archaeology and how it is done, whether in seminary courses, college classrooms, church groups, or personal study.

Joint winner of the 2011 Biblical Archaeology Society Publication Award in the category "Best Scholarly Book on Archaeology" The archaeology of the Holy Land is undergoing major change. 'Historical Biblical Archaeology and the Future' describes the paradigm shift brought about by science-based dating methods, geographic information systems, anthropological models, and digital technology tools. The book serves as a model for how researchers can investigate the relationship between ancient texts (both sacred and profane) and the archaeological record. Archaeologists and biblical scholars examine a range of texts, materials and cultures: the Vedas and India; the Homeric legends and Greek Classical Archaeology; the Sagas and Icelandic archaeology; Islamic Archaeology; and the Umayyad, Abbasid, and Ayyubid periods. The ground-breaking essays offer a foundation for future research in biblical archaeology, ancient Jewish history and biblical studies.

Considers human diversity and change and rejects the usual solutions to problems of relativism. Presents a new mode of inquiry in its stead a mixture of philosophy, history, and anthropology that appears to be more meaningful.

Historical Archaeology demonstrates the potential of adopting a flexible, encompassing definition of historical archaeology which involves the study of all societies with documentary evidence. It encourages research that goes beyond the boundaries between prehistory and history. Ranging in subject matter from Roman Britain and Classical Greece, to colonial Africa, Brazil and the United States, the contributors present a much broader range of perspectives than is currently the trend.

The recent work of anthropologists, historians, and historical archaeologists has changed the very essence of military history. While once preoccupied with great battles and the generals who commanded the armies and employed the tactics, military history has begun to emphasize the importance of the "common man" for interpreting events. As a result, military historians have begun to see military forces and the people serving in them from different perspectives. The Historical Archaeology of Military Sites has encouraged efforts to understand armies as human communities and to address the lives of those who composed them. Tying a group of combatants to the successes and failures of their military commanders leads to a failure to understand such groups as distinct social units and, in some instances, self-supporting societies: structured around a defined social and political hierarchy; regulated by law; needing to be supplied and nurtured; and often at odds with the human community whose lands they occupied, be they those of friend or foe. The Historical Archaeology of Military Sites will afford students, professionals dealing with military sites, and the interested public examples of the latest techniques and proven field methods to aid understanding and conservation of these vital pieces of the world's heritage.

When one hears the words "archaeology" or "archaeologist," often what comes to mind is an image of a romantic figure: Indiana Jones exploring exotic places in search of treasure and adventure. Indeed, novels, movies, and many popular accounts of archaeological discoveries have made this concept widespread. Tales of abandoned cities, ruined temples, primeval monuments, or mysterious ancient tombs tend to kindle the urge for adventure, exploration, or treasure hunting that seems to lie beneath the surface of even the most timid and conventional individuals. Today, however, archaeologists seek knowledge rather than objects that are intrinsically valuable. Their ultimate goal is to sweep aside the mists in which time has enveloped the past, helping us to understand vanished peoples and cultures. In Uncovering the Past, William H. Stiebing, Jr. offers an absorbing nontechnical history of archaeology, tracing the study of ancient material culture from its beginnings in the Renaissance through its development into the sophisticated modern discipline we know today. The first study to focus on archaeology as a discipline, Stiebing has organized this concise history into the four stages of archaeological development. The first two stages (1450-1860 and 1860-1925), known as the "heroic age," focus on the exploits of colorful, dynamic excavators who have made their mark on history and our imaginations. We read accounts of Giovanni Belzoni and the removal of the seven-ton colossus of Ramesses II, which was dragged by wooden platform and transported by boat from Egypt to London; we witness the clergyman John Peters's skirmish with Arab tribesmen, who surrounded his excavation site and finally pillaged and burned his camp; and Heinrich Schliemann's quest to prove the authenticity of Homer's Iliad by searching for ancient Troy along the Turkish coast. And we watch as archaeology comes of age as an academic discipline, employing stratigraphical excavation techniques, typographical sequence dating, and stratigraphically based pottery chronology--laying the foundation for universal archaeological activity. The third phase (1925-1960) marked the era of "Modern Archaeology," a time when, using the now generally accepted stratigraphical method of excavation, scholars were able to synthesize data to define individual cultures and trace their development through time. This period saw a greater use of scientific instruments and procedures to locate, date, and interpret remains, such as aerial photography, metal detectors, and most importantly, carbon-14 dating and tree-ring chronology. Lastly, Stiebing discusses the fourth phase of development (1960-present) which introduced a greater desire and need for a more complete understanding of ancient cultures, including their ecology, and attempts to explain why certain cultural phenomena occurred. He goes on to examine the greater emphasis on a cultural revolutionary approach, coupled with technological advances in robotics and computers over the last decade and a half and their commonplace role in modern archaeology. With over eighty photographs, illustrations, and maps, this vivid history is an outstanding introduction to the intriguing field of archaeology, chronicling the development of this former pastime of dilettantes into a rigorous science.

From deserts to jungles, from deep caves to mountain tops, from pebble tools to satellite photographs, from excavation to abstract theory, archaeology interacts with nearly every other discipline in its attempts to reconstruct the past. In this new edition, Paul Bahn brings the text up to date, including information about new discoveries and interpretations in the field, and highlighting the impact of developments such as the potential use of DNA and stable isotopes in teeth, as well the effect technology and science are having on archaeological exploration. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Carved from cliffs and canyons, buried in desert rock and sand are pieces of the ancient past that beckon thousands of visitors every year to the American Southwest. Whether Montezuma Castle or a chunk of pottery, these traces of prehistory also bring archaeologists from all over the world, and their work gives us fresh insight and information on an almost day-to-day basis. Who hasn't dreamed of boarding a time machine for a trip into the past? This book invites us to step into a Hohokam village with its sounds of barking dogs, children's laughter, and the ever-present grinding of mano on metate to produce the daily bread. Here, too, readers will marvel at the skills of Clovis elephant hunters and touch the lives of other ancestral people known as Mogollon, Anasazi, Sinagua, and Salado. Descriptions of long-ago people are balanced with tales about the archaeologists who have devoted their lives to learning more about "those who came before." Trekking through the desert with the famed Emil Haury, readers will stumble upon Ventana Cave, his "answer to a prayer." With amateur archaeologist Richard Wetherill, they will sense the peril of crossing the flooded San Juan River on the way to Chaco Canyon. Others profiled in the book are A. V. Kidder, Andrew Ellicott Douglass, Julian Hayden, Harold S. Gladwin, and many more names synonymous with the continuing saga of southwestern archaeology. This book is an open invitation to general readers to join in solving the great archaeological puzzles of this part of the world. Moreover, it is the only up-to-date summary of a field advancing so rapidly that much of the material is new even to professional archaeologists. Lively and fast paced, the book will appeal to anyone who finds magic in a broken bowl or pueblo wall touched by human hands hundreds of years ago. For all readers, these pages offer a sense of adventure, that "you are there" stir of excitement that comes only with making new discoveries about the distant past.
