Understanding Electric Utilities and De-Regulation,

Second Edition provides an updated, non-technical

description that sheds light on the nature of the

industry and the issues involved in its transition away

from a regulated environment. The book begins by

broadly surveying the industry, from a regulated

utility structure to the major concepts of de-

regulation to the history of electricity, the technical

aspects, and the business of power. Then, the authors delve into the technologies and functions on which the industry operates; the many ways that power is used; and the various means of power generation, including central generating stations, renewable energy, and single-household size generators. The authors then devote considerable attention to the details of regulation and de-regulation. To conclude, one new chapter examines aging infrastructures and reliability of service, while another explores the causes of blackouts and how they can be prevented. Based on the authors' extensive experience, *Understanding Electric Utilities and De-Regulation, Second Edition* offers an up-to-date perspective on the major issues impacting the daily operations as well as the long-term future of the electric utilities industry.

Business model innovation is an important source of competitive advantage and corporate renewal. An increasing number of companies have to innovate their business models, not just because of competitive forces but also because of the ongoing change from product-based to service-based business models. Yet, business model innovation also involves organizational change process that challenges existing processes, structures and modes of control. This volume features thirteen chapters written by authorities on business model innovation. The specific angle, and the novel feature of this book, is to thoroughly examine the organizational dimension of business model innovation. Drawing on organizational theory and empirical observation, the contributors specifically highlight organizational design aspects of business

model innovation, focusing on how reward systems, power distributions, routines and standard operating procedures, the allocation of authority, and other aspects of organizational structure and control should be designed to support the business model the firm chooses. Also discussed is how existing organizational structures, capabilities, beliefs, cultures and so on influence the firm's ability to flexibly change to new business models.
