The eighth edition of Measurement and Evaluation in Physical Education and Exercise Science, now published in paperback and hardback, offers students a clear and practical guide to best practice for measurement and evaluation in school- and nonschool-based physical activity programs. Written by two academics with backgrounds in physical education teacher education (PETE), the book emphasizes the link between theory and practice and reflects the most recent changes in national physical education programs. It covers a full range of introductory topics, including current trends in measurement and evaluation, program development, statistics, test selection, and an expanded chapter on alternative assessment, before introducing:

- measurement for health-related physical fitness
- measurement for psychomotor skills
- measurement for cognitive knowledge
- measurement for affective behaviors
- grading
- self-evaluation.

Each chapter features learning aids such as objectives, key terms, practical applications, and review questions, while an appendix offers in-depth Excel assignments. Offering a full companion website featuring an instructor's manual, lecture slides, and a test bank, Measurement and Evaluation in Physical Education and Exercise Science is a complete resource for instructors and students, alike. It is an essential text for students in measurement and evaluation classes as part of a degree program in physical education, exercise science or kinesiology, and a valuable reference for practitioners seeking to inform their professional practice.

In both education and training, teachers are faced with many and varied problems relating to their teaching and their students' learning. Educational technology, in its widest sense, provides teachers with methods and tools which, if properly used, can alleviate some of these problems. The computer is one such tool, offering, within certain limitations, some possible solutions. Originally published in 1979, this book describes the use of the computer as a resource and as a manager in education and training. It discusses the use, potential and limitations of this technology in helping the teacher and trainer. Beginning with a consideration of the role of the computer as a mediator in the flow of information between the student and his learning environment, the book goes on to look at Computer Assisted Learning from an educational viewpoint, the strength and weaknesses of a number of different media, and the problems of managing modular courses and course structures and handling information on students' performance and progress. A chapter on informatics and education addresses the problem of what both teachers and students should know about computers, while the final chapter examines the practical problems of prompting and organising the appropriate use of this technology.
