The Verbal Behavior (VB) approach is a form of Applied Behavior Analysis (ABA), that is based on B.F. Skinner's analysis of verbal behavior and works particularly well with children with minimal or no speech abilities. In this book Dr. Mary Lynch Barbera draws on her own experiences as a Board Certified Behavior Analyst and also as a parent of a child with autism to explain VB and how to use it. This step-by-step guide provides an abundance of information about how to help children develop better language and speaking skills, and also explains how to teach non-vocal children to use sign language. An entire chapter focuses on ways to reduce problem behavior, and there is also useful information on teaching toileting and other important self-help skills, that would benefit any child. This book will enable parents and professionals unfamiliar with the principles of ABA and VB to get started immediately using the Verbal Behavior approach to teach children with autism and related disorders.

The Reference Manual organizes existing BACB guidelines for supervision, presenting a face sheet for each 4th Edition Task List item with headings for Definitions, Examples, Assessment, Relevant Literature, and Related Lessons. The book includes supplemental materials for clinical and administrative ABA managers (i.e., in-depth case study, charts, best practice). BCBA supervisors and BCBA-exam candidates keep a copy in the office and bring it to clinical meetings to reference task list items for interventions, recommended literature, and supervision questions.

Social skills are at the core of mental health, so much so that deficits in this area are a criterion of clinical disorders, across both the developmental spectrum and the DSM. The Practitioner's Guide to Empirically-Based Measures of Social Skills gives clinicians and researchers an authoritative resource reflecting the ever growing interest in social skills assessment and its clinical applications. This one-of-a-kind reference approaches social skills from a social learning perspective, combining conceptual background with practical considerations, and organized for easy access to material relevant to assessment of children, adolescents, and adults. The contributors' expert guidance covers developmental and diversity issues, and includes suggestions for the full range of assessment methods, so readers can be confident of reliable, valid testing leading to appropriate interventions. publication of the Association for Behavioral and Cognitive Therapies Describes empirically-based assessment across the lifespan. Provides in-depth reviews of nearly 100 measures, their administration and scoring, psychometric properties, and references. Highlights specific clinical problems, including substance abuse, aggression, schizophrenia, intellectual disabilities, autism spectrum disorders, and social anxiety. Includes at-a-glance summaries of all reviewed measures. Offers full reproduction of more than a dozen measures for children, adolescents, and adults, e.g. the Interpersonal Competence Questionnaire and the Teenage Inventory of Social Skills. As social skills assessment and training becomes more crucial to current practice and research, the Practitioner's Guide to Empirically-Based Measures of Social Skills is a steady resource that clinicians, researchers, and graduate students will want close at hand.

This two-volume set provides a step-by-step teaching plan for each of the task codes identified within Dr. James Partington's Assessment of Basic Language and Learning Skills, Revised (ABLLS-R). spectrum disorder (ASD). Part one reviews the characteristics of ASD, summarizes major theories and research findings regarding cause(s) of ASD, and discusses the most popular treatment claims, examining each approach's scientific base and value. Part two provides an informative overview of applied behavior analysis, focusing on the principles of learning and basic procedures based upon those principles. These two parts provide a foundation for understanding the strategies implemented by the outstanding treatment programs described in Part three. The eight models described in Part three represent comprehensive, evidence-based programs for the treatment of persons with ASD, from infancy through adulthood. Programs reviewed include the Lovaas Institute, Koegel Center, Strategic Teaching and Reinforcement Systems (STARS), Project DATA, New England Children's Center, May Institute, Princeton Child Development Institute, and Judge Rotenberg Center. Strategies explained include intensive early behavioral intervention, Pivotal Response Training, verbal behavior, script fading, social stories, visual activity schedules, functional analysis, the Picture Exchange Communication System, and the Family-Teaching Model.
