When the late Spiro Kostof's A History of Architecture appeared in 1985, it was universally hailed as a masterpiece--one of the finest books on architecture ever written. Now, updated and expanded, this classic reference continues to bring to readers the full array of civilization's architectural achievements. Insightful, engagingly written, and graced with close to a thousand superb illustrations, the International Second Edition of this extraordinary volume offers a sweeping narrative that examines architecture as it

reflects the social, economic, and technological aspects of human history. The scope of the book is astonishing. No mere survey of famous buildings, Kostof's History examines a surprisingly wide variety of man-made structures: prehistoric huts and the TVA, the pyramids of Giza and the Rome railway station, the ziggurat and the department store. Kostof considered every building worthy of attention, every structure a potential source of insight, whether it be prehistoric hunting camps at Terra Amata, or the caves at Lascaux with their magnificent paintings, or a twenty-story hotel on the Las Vegas Strip.

The Social and Cultural Construction of Risk: Issues, Methods, and Case Studies Vincent T. Covello and Branden B. Johnson Risks to health, safety, and the environment abound in the world and people cope as best they can. But before action can be taken to control, reduce, or eliminate these risks, decisions must be made about which risks are important and which risks can safely be ignored. The challenge for decision makers is that consensus on these matters is often lacking. Risks believed by some individuals and groups to be tolerable or accept able - such as the risks of nuclear power or industrial pollutants - are intolerable and unacceptable to others. This book addresses this issue by

exploring how particular technological risks come to be selected for societal attention and action. Each section of the volume examines, from a different perspective, how individuals, groups, communities, and societies decide what is risky, how risky it is, and what should be done. The writing of this book was inspired by another book: Risk and Culture: An Essay on the Selection of Technological and Environmental Dangers. Published in 1982 and written by two distinguished scholars - Mary Douglas, a British social anthropologist, and Aaron Wildavsky, an American political scientist - the book received wide critical attention and offered several provocative ideas on the nature of risk selection, perception, and acceptance.

Global rankings and the Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education, policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education, how they have impacted upon both the production of knowledge and its geography, and their influence in shaping policymaking. Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India and North America. An analysis of rankings in relation to key concerns that pervade contemporary higher education. Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems, and which is likely to have an important influence upon how we understand the

higher education policy-making process - past, present and future. It provides new analysis and conceptual understanding for researchers, and firm evidence for policy makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations - from both those involved in making and also in administering key decisions. This timely, reflective and accessible book forms crucial reading for those studying the subject of rankings, as well as the broader implications and unintended consequences of rankings on national higher education policies. Extending beyond academic researchers and students, this book will also be of significant interest to policymakers, higher education leaders and key stakeholders. Mitch Kowalski has translated his considerable understanding of tomorrow's legal profession into an original, provocative and entertaining narrative. Professor Richard Susskind, author of The End of Lawyers? This is the most innovative law practice management book I've ever seen. Mitch has deftly combined an engaging novel about the lives of working

lawyers with an illuminating treatise on how law firms must respond to extraordinary change in the legal marketplace. Avoiding Extinction is as entertaining as it is instructive -- and it couldn't be more timely. Jordan Furlong, Partner, Edge International This is a must read for managing partners, and for all lawyers under the age of 50. Written as a parable, once you pick it up its difficult to put down. And it literally screams relevance to the lives of those lawyers today who worry about the sustainability of the current model of legal practice. Big firm or small. City or rural no matter, this book is for you. Can the law be both a profession and a business? Is it possible to escape the tyranny of the billable hour? Is it realistic to imagine being a truly happy lawyer in private practice in the twenty-first century? You bet and Mitch Kowalski shows us how! Ian Holloway QC, Dean of Law, The University of Calgary Avoiding Extinction is the most original, far-thinking and innovative book on transforming the way that law is practised that I have ever read. Mitch has taken the traditional law firm and turned it upside down. In the process he has reworked the law firm model and given us an insight into how a firm could be structured and run. If you are looking for a creative vision into

what a new, truly different law firm could look like, then this book is manna from heaven. David J. Bilinsky, Practice Management Advisor, lawyer and writer on law practice management and technology. Creator of the law blog, Thoughtful Legal Management.

Outsourcing has become an increasingly important issue for many organisations. This book provides a framework for an up-to-date understanding of the outsourcing process and the key issues associated with it. It integrates a number of contemporary topics including benchmarking, buyer-supplier relationships, organisational behaviour, competitor analysis, and technology influences. The analysis draws upon both empirical research and real case studies. The author starts by providing guidelines as to when outsourcing is appropriate and what its implications will be, before moving on to explain how outsourcing is implemented. The benefits of both successful outsourcing and the risks and consequences of outsourcing failure are outlined. The book is ideal for use by postgraduate students studying the area of outsourcing. It would also benefit

industry managers who are considering outsourcing or who already have outsourcing programmes in place. This book explains when and how interest groups are influential in the European Parliament, which has become one of the most important lobbying venues in the EU. Yet we know little about the many ways in which interest groups and lobbyists influence parliamentary politics. The author offers insights on four key cases of lobbying, based on the analysis of EU documents, lobbying letters, and 150 interviews. She argues that lobbying success depends on a number of factors, most notably the degree of counter-lobbying, issue salience, and committee receptiveness. These factors are brought together in the framework of "Triple-I" - interests, issues, and institutions - to determine the success or failure of lobbying. This book will be of use to students and scholars interested in EU politics and governance, EU decision-making, and interest group politics, along with policy-makers and practitioners.

A Washington Post Bestseller Not all collaboration is smart. Make sure you do it right. Professional service firms face a serious challenge. Their clients increasingly need them to solve complex problems—everything from regulatory compliance to cybersecurity, the kinds of problems that only teams of multidisciplinary experts can tackle. Yet most firms have carved up their highly specialized, professional experts into narrowly defined practice areas, and

Read Book Accounting 101 The Basics Accountingverse

collaborating across these silos is often messy, risky, and expensive. Unless you know why you're collaborating and how to do it effectively, it may not be smart at all. That's especially true for partners who have built their reputations and client rosters independently, not by working with peers. In Smart Collaboration, Heidi K. Gardner shows that firms earn higher margins, inspire greater client loyalty, attract and retain the best talent, and gain a competitive edge when specialists collaborate across functional boundaries. Gardner, a former McKinsey consultant and Harvard Business School professor now lecturing at Harvard Law School, has spent over a decade conducting in-depth studies of numerous global professional service firms. Her research with clients and the empirical results of her studies demonstrate clearly and convincingly that collaboration pays, for both professionals and their firms. But Gardner also offers powerful prescriptions for how leaders can foster collaboration, move to higher-margin work, increase client satisfaction, improve lateral hiring, decrease enterprise risk, engage workers to contribute their utmost, break down silos, and boost their bottom line. With case studies and real-world insights, Smart Collaboration delivers an authoritative case for the value of collaboration to today's professionals, their firms, and their clients and shows you exactly how to achieve it.

The most enduring challenge to traditional monotheism is the problem of evil, which attempts to reconcile three incompatible propositions: God is all-good, God is

Read Book Accounting 101 The Basics Accountingverse

all-powerful, and evil happens. The Prince of This World traces the story of one of the most influential attempts to square this circle: the offloading of responsibility for evil onto one of God's rebellious creatures. In this striking reexamination, the devil's story is bitterly ironic, full of tragic reversals. He emerges as a theological symbol who helps oppressed communities cope with the trauma of unjust persecution, torture, and death at the hands of political authorities and eventually becomes a vehicle to justify oppression at the hands of Christian rulers. And he evolves alongside the biblical God, who at first presents himself as the liberator of the oppressed but ends up a cruel ruler who delights in the infliction of suffering on his friends and enemies alike. In other words, this is the story of how God becomes the devil—a devil who remains with us in our ostensibly secular age.

types of business investments made in Southeast Asia, Central Africa, and the Amazonian tropical belts. These tropical regions continue to face opportunities and challenges in attracting foreign direct investments as well as the need to complement and/or compete with larger economies external to the tropics. This book provides an empirical assessment of the key sociocultural, economic, environmental, and political factors that influence the business dynamics of organizations operating within the tropics. It will address but is not limited to topics such as attracting businesses to the tropics, facilitating smooth, stable conditions for business operations and sustainability, national institutions, and regulations that shape the way business is done, and the increasing deployment of new technologies and entrepreneurial innovations which are defining the global tropics as a distinct business region. It will offer readers a key focus for developing a deeper understanding of the factors and frameworks that influence and shape business activity in the area. While the primary audience for the book consists of academics and students from the fields of economics (environmental economics,

interests in the EU. Showing that interest representation is a key aspect of the European project, it examines the significance of interests for everyday policy-making, for European integration, and for the democratic legitimacy of the EU. Accessibly written and thoroughly updated, the new edition contains additional material on the regulation of lobbying and the European Transparency Register. This book sheds new light on how lobbying works in the European Union. Drawing on the first-hand professional experience of lobbyists, policymakers, and corporate and institutional stakeholders, combined with a sound academic foundation, it offers insights into successful lobbying strategies, such as how alliances are formed by interest groups in Brussels. The authors present key case studies, e.g. on the shelved EU-US trade deal Transatlantic Trade and Investment Partnership (TTIP), lobbying scandals, and the role of specific interest groups and EU Think-Tanks. Furthermore, they highlight efforts to improve transparency and ethical standards in EU decision-making, while also underscoring the benefits of lobbying in the context of decision-making. Understanding the tools and techniques of effective lobbying, as well as the dynamics and trends in EU lobbying, will allow professionals involved in the lobbying process, such as policymakers and corporate and institutional stakeholders, to improve their performance and achieve better results when pursuing their respective interests.
