Indigenous, ethnic and rural peoples throughout the world struggle to effectively deal with the challenges triggered by outside economic and social intervention. This book presents business methods in a manner that reflects the needs, desires and priorities of indigenous peoples and provides the tools communities need to envision and deal with the full impact of social and economic intervention. In particular, the book helps local leaders and their advocates to better understand the full implications of the changes before them and develop skills to articulate and deal with local goals, needs, and priorities. The book is distinctive because it shows people embrace opportunities and change on their own terms. As a result, leaders and their advocates will be better able to evaluate and respond to opportunities in an informed and systematic manner. Various business disciplines (such as accounting, finance, human resource management, organizational theory, and marketing) are discussed in ways that help the reader to envision both mainstream perspectives and the distinctive issues faced by ethnic enclaves.

With over 30 years of experience in both industrial and university settings, the author covers the most widespread logic design practices while building a solid foundation of theoretical and engineering principles for students to use as they go forward in this fast moving field.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and a source of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make those decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Management and cost accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for cost accounting and management accounting. Management Accounting is becoming increasingly international. "Management and Cost Accounting" is a new English language textbook covering concepts and instruments of cost and management accounting at an introductory level (Bachelor, but also suited for MBA courses due to strong focus on practical applications and cases). This textbook covers all topics that are relevant in management accounting in business organizations and that are typically covered in German and Central European Bachelor classes on cost accounting and management accounting. After an introduction to the topic, including major differences between the German approach and the purely Anglo-Saxon approach of management accounting, the book describes different cost terms and concepts applied in German cost accounting. The book is much more specific here compared to US-American standard textbooks. Based on different cost concepts, the topic of cost behavior is discussed, including the determination of cost functions. The heart of the book guides the reader through the general structure of a fully developed cost accounting system following the German and Central European standard: It starts with cost type accounting, moves on to cost center accounting and finally deals with cost unit accounting, assigning cost to goods and services offered in the market. The remaining parts of the book deal with decision making and how management and cost accounting data can support managers in this task. A comparison of absorption costing and variable costing introduces the reader to management decisions such as product portfolio and outsourcing decisions. Additionally, cost-volume-profit analysis (break-even-analysis) is covered. The book closes with a comprehensive treatment of cost planning and variance analysis.

In an age of rising environmental concerns, it has become necessary for businesses to pay special attention to the resources they are consuming and the long-term effects of the products they are creating. These concerns, coupled with the current global economic crisis, demand a solution

that includes not only business, but politics, ecology, and culture as well. The Handbook of Research on Developing Sustainable Value in Economics, Finance, and Marketing provides the latest empirical research findings on how sustainable development can work not just for organizations, but for the global economy as a whole. This book is an essential reference source for professionals and researchers in various fields including economics, finance, marketing, operations management, communication sciences, sociology, and information technology. The design of Management Control Systems (MCS) in the context of financial institutions should be reconsidered with regards to their ability to improve organizational justice perceptions. Promoting organizational justice can help banks to build significantly more trust and influence employees' behaviors in the best interest of the organization. Especially the design of Beyond Budgeting as a MCS that emphasizes social control mechanisms and facilitates autonomous working appears to be a promising concept for the design of future MCS in the context of financial institutions.

The past few years have shown that risks in banking can impose significant costs on the economy. Many claim, however, that a safer banking system would require sacrificing lending and economic growth. The Bankers' New Clothes examines this claim and the narratives used by bankers, politicians, and regulators to rationalize the lack of reform, exposing them as invalid. Anat Admati and Martin Hellwig argue that we can have a safer and healthier banking system without sacrificing any of its benefits, and at essentially no cost to society. They seek to engage the broader public in the debate by cutting through the jargon of banking, clearing the fog of confusion, and presenting the issues in simple and accessible terms.

La información de contabilidad adecuada y precisa es esencial para todas las decisiones gerenciales y financiera. Los gerentes preparan informes financieros para el uso interno y externo. El uso preciso de los datos y la selección de los métodos de contabilidad relacionados con las estimaciones y mediciones de rendimiento de las empresas aumenta la fiabilidad de los informes financieros. La utilización precisa de los datos no se refiere sólo a los principios y directrices de contabilidad, depende de otras cuestiones tales como la preparación, la creencia y la ética de los contadores.
