This book includes the proceedings of the 15th International Conference on Complex, Intelligent, and Software Intensive Systems, which took place in Asan, Korea, on July 1–3, 2021. Software intensive systems are systems, which heavily interact with other systems, sensors, actuators, devices, and other software systems and users. More and more domains are involved with software

intensive systems, e.g., automotive, telecommunication systems, embedded systems in general, industrial automation systems, and business applications. Moreover, the outcome of web services delivers a new platform for enabling software intensive systems. Complex systems research is focused on the overall understanding of systems rather than its components. Complex systems are very much characterized by the changing environments in which they act by their multiple internal and external interactions. They evolve and adapt through internal and external dynamic interactions. The development of intelligent systems and agents, which is each time more characterized by the use of ontologies and their logical foundations build a fruitful impulse for both software intensive systems and complex systems. Recent research in the field of intelligent systems, robotics, neuroscience, artificial intelligence, and cognitive sciences is very important factor for the future development and innovation of software intensive and complex systems. The aim of the book is to deliver a platform of scientific interaction between the three interwoven challenging areas of research and development of future ICT-enabled applications: Software intensive systems, complex systems, and intelligent systems.

This book constitutes the refereed proceedings of the 6th International Conference on Electronic Government held in September 2007. The 37 revised papers were selected from numerous submissions. They cover research foundations, frameworks and methods, process design and interoperability, electronic services, policies and strategies, assessment and evaluation, participation and democracy, and perspectives on e-government.

"Desain, pengembangan, dan dokumentasi sistem informasi merupakan kebutuhan dasar yang wajib dipenuhi oleh setiap organisasi. Sayangnya, tidak banyak pengelola organisasi yang memiliki kemampuan cukup untuk me-manage rangkaian prosedur dan panduan operasinya. Padahal hanya dengan modal ketekunan, setiap orang dapat menguasai teknik-teknik desain dan dokumentasi sistem informasi. Melihat kebutuhan tersebut, buku ini hadir dan sangat layak dijadikan referensi utama bagi siapa saja yang ingin belajar tentang sistem informasi dan dokumentasinya. Di dalamnya juga mengupas berbagai tip & trik pembuatan dokumentasi dengan mengoptimalkan satu software saja, Microsoft Visio. Buku ini membahas berbagai teknik desain dan dokumentasi yang mampu meningkatkan performa organisasi, seperti mind map, dokumentasi perencanaan dalam Gantt Chart dan diagram PERT, dokumentasi struktur organisasi, pembuatan flowchart dan work/data flow diagram, desain database berelasi, desain form dan laporan, dan desain layout jaringan, dan sebagainya. Selain itu, buku ini dilengkapi dengan berbagai ilustrasi kasus sederhana untuk memudahkan pengguna. Intinya, buku ini tidak sekedar membuat pengguna piawai dalam mengutak-atik Visio, namun juga dibekali dengan pemahaman konsep dan aspek seni yang perlu dipertimbangkan dalam mengembangkan dokumentasi dengan lebih efektif dan efisien."

Proceedings of the 2nd International Conference on Quran and Hadith Studies Information Technology and Media in Conjunction with the 1st International Conference on Islam, Science and Technology, ICONQUHAS & ICONIST, Bandung, October 2-4, 2018, Indonesia Now-days, Multimedia devices offer opportunities in transforming the Quran and Hadith into different forms of use, and into extended areas of studies. Technology information offers challenges as well as opportunity. Therefore, Faculty of Ushuluddin, UIN (the State Islamic University) Syarif Hidayatullah Jakarta, of UIN Sunan Gunung Djati Bandung, and UIN Maulana Malik Ibrahim Malang held jointly the 2nd International Conference on Qur'an and Hadith Studies (ICONQUHAS 2018) and the 1st International Conference on Islam, Science, and Technology (ICONIST2018), with the theme "Qur'an-Hadith, Information Technology, and Media: Challenges and Opportunities". There is mounting evidence that the deployment of digital technologies by enterprises affects not just their functioning in economic

terms, but also mobilizes broader social, institutional, and organizational effects. At a technical level, digitization directly influences organizational processes. Notions of its potential also define managerial pursuits and the search for enhanced organizational performance. Inevitably, digitizatoin impacts the form, substance and provenance of internal accounting information with attendant consequences on the behaviour and actions of decision makers. Knowledge about the influence of digital technologies on management accounting thinking processes and practices is starting to emerge. A variety of issues relating to pricing strategies, cost management and control mechanisms are evident. But the implications for the field are far wider. Aspects of trust, organizational power, cultural shifts, strategization, convergence of product and information elements, and newly perceived contingencies between information dimensions and contextual factors are altering management accounting systems, structures, thinking, and practices. This book explores these and other issues along different planes of reference. The first part of the book consists of chapters that discuss accounting and management control systems and wider structural shifts connected with the advent of digital technologies. In the second section, the contributors analyse organizationally focused shifts occurring concomitantly alongside digital transformations in the economy. The final part of the book comprises chapters that consider avenues of accounting transformation that may be pursued in specific contexts both in terms of practice and as concepts that afford insights into possible management accounting futures. Broadly, the fourteen chapters of this book bring together practical commentaries, conceptual frameworks, and theoretical argumentation and explore wider narratives regarding the interface between management accounting and the digital economy. Management Accounting in the Digital Economy will be of interest to scholars, advanced students, and practitioners concerned with the management accounting and control implications of the growing ubiquity of digital technologies across organizational spaces and economic platforms.

With Numerical Application Examples from Different Industries

With the modernization of services offered through the internet, many traditional face-to-face services have adopted new e-service phenomena. Especially prevalent among the younger generations, this change in service has promoted many industries to rethink how to best reach their consumers using modern technology. Structural Equation Modeling Approaches to E-Service Adoption is a pivotal reference source that aims to share the latest empirical research findings within technology acceptance, information systems, information technology, human-computer interaction, and management information systems. While highlighting topics such as e-commerce, internet banking, and technology acceptance, this publication explores the understanding of today's e-services in a dynamic and complex environment, as well as the methods within the field of

information systems and information technologies. This book is ideally designed for academics, students, managers, and scholars interested in the up-and-coming research surrounding the field of information technology.

Accounting Information Systems provides a comprehensive knowledgebase of the systems that generate, evaluate, summarize, and report accounting information. Balancing technical concepts and student comprehension, this textbook introduces only the most-necessary technology in a clear and accessible style. The text focuses on business processes and accounting and IT controls, and includes discussion of relevant aspects of ethics and corporate governance. Relatable real-world examples and abundant end-of-chapter resources reinforce Accounting Information Systems (AIS) concepts and their use in day-to-day operation. Now in its fourth edition, this popular textbook explains IT controls using the AICPA Trust Services Principles framework—a comprehensive yet easy-to-understand framework of IT controls—and allows for incorporating hands-on learning to complement theoretical concepts. A full set of pedagogical features enables students to easily comprehend the material, understand data flow diagrams and document flowcharts, discuss case studies and examples, and successfully answer end-of-chapter questions. The book's focus on ease of use, and its straightforward presentation of business processes and related controls, make it an ideal primary text for business or accounting students in AIS courses.

One of the major challenges for European governments is to solve the dilemma of increasing the security and reducing fraud in international trade, while at the same time reducing the administrative burden for commercial as well as public administration organisations. To address these conflicting demands, the ITAIDE project has developed a large set of innovative IT-related tools and methods that enable companies to be better in control of their business operations. These tools and methods have been integrated in the ITAIDE Information Infrastructure (I3) framework. By using the I3 framework, companies are better positioned to apply for the Trusted Trader status, and enjoy trade facilitation benefits such as simplified customs procedures and fewer inspections of their goods. Hence, the I3 framework can contribute to making global supply chains faster, cheaper, and more secure. The I3 framework has been tested and validated in five real-life Living Labs, spanning four different sectors of industry, and conducted in five different EU countries. National Tax & Customs organizations from various European countries have actively participated in the Living Labs. The United Nations CEFACT group, experts from the World Customs Organization and representatives of key industry associations have also provided valuable feedback and ideas for the Living Labs and

For those in accounting related positions.

This successful textbook is highly regarded, especially in programs that want a solid, comprehensive text for students who sit

for the CPA exam. The book is loosely organized into five sections which allow for flexibility in sequencing the topics. Many of the topics are illustrated by examples using a continuous case involving a fictitious company called Peerless Products Corporation and its subsidiary, Special Foods, Inc.

This book is prepared to answer the demands for the practical guidance of systems analysis and design methods. The author hopes that after reading this book, the reader can understand the concepts and techniques to analyze and design the systems. In general, there are 2 (two) main methods that most often used in system development: structured and object-oriented methods. The book explains a significant paradigm difference between the two methods of analyzing and designing the systems. The author expects the readers can distinguish that paradigm as well as analyze and design using both methods. The book structure starts from the concept to technical. The author uses the Unified Modeling Language (UML), which is widely used, for documenting object-oriented modeling. The UML has proven its ability to document and model the systems on a large, medium, and small scale.

Management Accounting in the Digital Economy

Businesses and managers everywhere are finding out that using the classical investment analysis methods is not enough to cover their need for smart decision-support for high risk, hard to estimate investments under vague information, such as investments into R&D, IPR, and any other strategic projects and assets. This book introduces the pay-off method and shows how the method can enhance investment analysis and decision-support in a profound way. The pay-off method and a selection of tools within the pay-off method arsenal, including real option valuation, are simple to use, transparent, no-nonsense, and intuitive to understand. This book explains the pay-off method in detail and shows with many numerical easy-to-follow examples how the method can be applied in real-world decision-making in different industries. This book shows also how decision-making can be enhanced by visualizing imprecision and how real option valuation can be performed simply. All method presented are easily implementable with the most commonly used spread-sheet software. The pay-off method is a clear continuation to where the "old" investment analysis methods usually leave uss off and gives you a chance to better plan and to understand your investments. After having read this book you will never be the same decision-maker again, but you will know what information to require for better investment decision-making.
