with what she terms "Anglo" culture. Wierzbicka points out that language and culture are not just interconnected, but inseparable. She uses original research to investigate the "universe of meaning" within the English language (both grammar and vocabulary) and places it in historical and geographical perspective. This engrossing and fascinating work of scholarship should appeal not only to linguists and others concerned with language and culture, but the large group of scholars studying English and English as a second language.

Throughout history, linguists and literary scholars have been impelled by curiosity about particular linguistic or literary phenomena to seek to observe them in action in original texts. The fruits of each earlier enquiry in turn nourish the

Corpus Linguistics, thirty years on, is less an innocent sortie into corpus territory on the basis of a hunch than an informed, critical reassessment of existing analytical orthodoxy, in the light of new data coming on stream. This volume comprises twenty-two articles penned by members of the ICAME (International Computer Archive of Modern and Mediaeval English) association, which together provide a critical and informed reappraisal of the facts, data, methods and tools of Corpus Linguistics which are available today. Authors reconsider the boundaries of the discipline, exploring its areas of commonality with Sociolinguistics,

This encompasses issues such as English as an international lingua franca, 'norms' for global English, and the question of 'ownership', or who qualifies as a native speaker.

and clause complex. Grounded in SFL, the research begins by introducing the system of types of modality in Modern Chinese, investigating the subtypes of modality and their realizations. The study then explores the systems of Orientations that characterize the realization of modalization and modulation in Chinese. After establishing the complete system of modality in Modern Chinese, the research finally examines the functions that realizations of modality serve in the textual structure of the clause and in the clause complex. The study

finds that the system of MODALITY is an important interpersonal clause system at the lexicogrammatical stratum of Chinese. There are two distinct types of modality in Chinese: modalization and modulation. Modalization concerns the assessment of probability of the proposition; modulation is concerned with the assessment of the proposal in terms of obligation, inclination, and ability. The systems of ORIENTATIONS make a basic distinction between subjective and objective modality, and between the explicit and implicit realizations. The

research also reveals that in the thematic structure of the clause, realizations of modality can serve as the interpersonal Theme in the clause, in the information structure of the clause, realizations of modality can function as the unmarked information focus of the clause or introduce the marked information focus, and in the clause complex, realizations of modality can encode modal meanings and simultaneously construct clauses into a clause complex. This book takes a close look at the whole field of modal certainty as expressed by adverbs in English. On the basis of corpus data the most frequent adverbs of certainty, including certainly, indeed, and no doubt, are examined from the point of view of their syntactic, semantic and pragmatic characteristics. Modality is a grammatical, or semantic-grammatical, category. It is an important component of human languages. This is at least the case in most European languages. To what extent is it a near-universal? This thesis is to contribute to the question. It focuses on modal verbs in English and Chinese, two genetically and geographically unrelated languages, and analyzes what these

two languages have in common and how they differ in their systems of modality. To achieve the aim, the thesis adopts the theoretical framework proposed by van der Auwera (1996, 1998 with Plungian, 2001) for the typological study of modality. Its language-specific descriptions involve the morphosyntactic features, notional functions, modal logic, and diachronic development. With these descriptions, it constructs a cross-linguistic database in a uniform, parallel structure. Then on the basis of this database, it deals with the cross-linguistic issues about modality in English and Chinese.

Like many of the studies in this area, this research makes use of the well-sampled data in the relevant literature, thereby assuring the same degree of representativeness. When the data do not meet this need, it resorts to computer-based corpora. In the diachronic study of Chinese modality, quantitative analysis is adopted in proposing a development path for the senses of a modal. English translation is given particular attention in the description of Chinese modality and cross-linguistic analyses. One can only know one's own language only if one compares it with other languages. The present

Professor of Language and Communication at Oxford University and author of a number of leading texts in the field of language and gender studies, draws on over 30 years of scientific research to explain what we really know and to demonstrate how this is often very different from the account we are familiar with from recent popular writing. Ambitious in scope and exceptionally accessible, *The Myth of Mars and Venus* tells it like it is: widely accepted attitudes from the past and from other cultures are at heart related to assumptions about language and the place of men and women in society; and there is as much similarity and variation within each gender as between men and women, often associated with social roles and relationships. The author goes on to consider the influence of Darwinian theories of natural selection and the notion that girls

and boys are socialized during childhood into different ways of using language, before addressing problems of 'miscommunication' surrounding, for example, sex and consent to sex, and women's relative lack of success in work and politics. Arguing that what linguistic differences there are between men and women are driven by the need to construct and project personal meaning and identity, Cameron concludes that we have an urgent need to think about gender in more complex ways than the prevailing myths and stereotypes allow. A compelling and insightful read for anyone with an interest in communication, language, and the sexes.

What do we mean when we say things like 'If only we knew what he was up to!' Clearly this is more than just a message, or a question to our addressee. We are expressing simultaneously that we don't know, and also that we wish to know. Several modes of encoding contribute to such modalities of expression: word order, subordinating conjunctions, sentences that are subordinated but nevertheless occur autonomously, and attitudinal discourse adverbs which, far beyond lexical adverbials of modality, allow the speaker and the listener to presuppose full agreement, partial agreement under

The relationship between language and conceptualization remains one of the major puzzles in language research. This monograph addresses this issue by means of an in depth corpus based and experimental investigation of the major types of expressions of epistemic modality in Dutch, German and English. This volume presents strongly empirical, corpus-based studies of a range of English modal auxiliaries and modal constructions in specific uses. This title illustrates this trend with a representative sample of contrastive linguistic case studies.

This book offers original theoretical accounts and a wealth of descriptive information concerning modality in present-day English. At the same time, it provides fresh impetus to more general linguistic issues such as grammaticalization, colloquialization, or the interplay between sociolinguistic and syntactic constraints.
