"The risk of engine failure is greatest when your engine is young, NOT when it's old. You should worry more about pediatrics than geriatrics." -Mike Busch
A&P/IA Mike Busch on Engines expands the iconoclastic philosophy of his groundbreaking first book Manifesto to the design, operation, condition monitoring, maintenance and troubleshooting of piston aircraft engines. Busch

Read Free Aircraft Engine Mechanic Schools

begins with the history and theory of four-stroke spark-ignition engines. He describes the construction of both the "top end" (cylinders) and "bottom end" (inside the case), and functioning of key systems (lubrication, ignition, carburetion, fuel injection, turbocharging). He reviews modern engine leaning technique (which your POH probably has all wrong), and provides a detailed blueprint for maximizing the life of your engine. The second half presents a 21st-century approach to

health assessment, maintenance, overhaul and troubleshooting. Busch explains how modern condition monitoring tools-like borescopy, oil analysis and digital engine monitor data analysis-allow you to extend engine life and overhaul strictly on-condition rather at an arbitrary TBO. The section devoted to troubleshooting problems like rough running, high oil consumption, temperamental ignition and turbocharging issues is worth its weight in gold. If you want your

flights successfully carried out daily are key employees, such as mechanics and service technicians. Young readers will benefit from this book's methodical approach to finding a job in this invaluable and rewarding career sector. The sky is the limit, as it guides eager novices from the necessary STEM subjects they should expect to encounter, through the ins and outs of picking technical schools, as well as the expected trajectory they will take from entry-level positions through to the higher echelons of these skilled trades.

147. The study surveyed 239 book publishing firms and 105 aviation maintenance technician schools. There were 4,349 students who participated in the reading experiment and 103 instructors who administered the reading experiment in 41 aviation maintenance technician schools. Both students and instructors evaluated the text materials used in the reading experimental study.

problem in the Air Force situation. It represents the first in a series of studies concerned with the utility of certain apparatus and printed manipulative tests as possible additions to the printed Airman Classification Battery. In the present instance, three schools in the Aircraft Maintenance area were selected for study. These were the Engine Mechanic (R-4360), Hydraulic Mechanic and Aircraft Electrician (General) courses, all at Chanute Air Force Base. A battery of 16 experimental tests (yielding 25 scores) was administered to students entering these courses. Included among these tests were certain printed psychomotor tests designed as possible substitutes for
