interest, you can design unit colors and markings of your favorite country's fighter squadron with the use of a computer, printer, and self-adhesive labeling sheet. These fighter models demonstrate the ancient craftsmanship of origami combined with figures of the modern world of flying machines. Hobbyists will enjoy the artistry

and younger children will discover an amazing and challenging craft that helps teach patience, persistence, and creativity. The increasing demand for new civil aircraft pushes aircraft manufacturers to develop innovative solutions that lead in particular to mass reductions. One way to achieve these kinds of improvements is the

use of multidisciplinary analysis and optimization. In this sense the intention of this PhD thesis is to develop a multidisciplinary framework in order to quantify the impact of load alleviation function parameter changes on structural components like the wing and fuselage in terms of resulting mass changes. The

developed iterative process chain covers the loads calculation including an active load alleviation system, a structural assessment of the wing and fuselage components and a dedicated feedback loop in order to update mass and stiffness properties of the loads calculation model. The study shows that significant mass

reductions are achievable while on the other hand estimated mass penalties are irrelevant.

thus significantly reduce cost. The achieved speedup will also support rapid modeling and prototyping and reduce "time to market".

This book will teach you
