*We relate to things and things relate to us. Emerging technologies do this in ways that are interesting and exciting, but often also inaccessible or invisible. In Relating to Things, leading design researchers and philosophers respond to issues raised by this situation - inquiring into what it means to live with and relate to things that can actively relate to us, and that relate to each other in ways that do not involve us at all. Case studies include Amazon's Alexa, the Internet of Things, Pokémon Go and Roomba the robot vacuum cleaner. Authors explore everything from the care work undertaken by objects, reciprocal human/machine learning, technological mediation as a form of control, and what it takes to reveal things that tend to be hidden and that often (by design) conceal the ways in which they use us. As a whole, the book is a collaborative philosophical inquiry into the nature and consequences of contemporary technological things. It is a design inquiry into the current nature of the artificial, and possibilities for how things might be otherwise.*

*What is Amazon Alexa all about? Well, in essence, this is a small tool developed by Amazon, which can act as a personal assistant through voice interaction and music playback. You can also stream podcasts, make a to-do list, use its home automation function to control smart devices around the house as well as performing other duties. In most cases, you can always activate the device using a wake-word, or push a button to activate the device's listening mode, and Amazon is always working on making Alexa better. The device is worth considering and can be handy as well, but first, check out what is in it for you. You can get a companion app for this device from Google Play, Apple Apps or Amazon App Store. You can then use control music view shopping lists or install skills on the devices that you have synchronized with your Amazon Alexa. And if you want to set up several compatible devices such as Amazon Dot, Amazon Echo, or such, a web interface comes will be beneficial. Besides, you can recognize text on your app screen, as well as send feedback to Amazon regarding the cognition. Amazon Alexa is capable of carrying out numerous functions around the house and beyond. One of the ways, you can use it is home automation, since it can be set to interact with several devices in the house to carry out several tasks. This feature was launched in 2015 and has been a game changer for many users of this device. Another thing you will love about this smart device is placing orders. If you want take-out food, then Alexa is one of the ways you can use to place the order. This is all thanks to support by Grubhub, Domino's Pizza, Wingstop, Seamless, and other companies. You can also order meals with Amazon Prime using Alexa in as many as 20 major cities in the US. What's more, an addition in November 2017 including Alexa Cloud Cam is proving effective in helping Amazon couriers unlock front doors to customer houses when delivering packages so that they can put them safely inside the house.*

Aku percaya. Bukan tentang alasan kamu, tapi memang semesta mempunyai berjuta cara untuk kembali mempertemukan insan yang telah ditakdirkan untuk bersama. Begitulah perlakuan semesta kepada kita. Disaat jarak yang terasa dekat, rasanya arah antara aku dan kamu seolah membentang sangat jauh. Dari mu aku belajar bahwa hidup akan selalu dipenuhi dengan orang-orang baru. Tapi kembali lagi, tentang bagaimana kita yang akan menanggapi seseorang itu. Entah mempersilakan nya dengan baik, atau bahkan hanya mengatakan hallo. Kembali lagi, itu adalah hak bagaimana sang tuan mempersilakan tamu nya. Aku, menjadi paham. **Your voice as biometric data, and how marketers are using it to manipulate you Only three decades ago, it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went, or that peoples' exact locations could be tracked by those devices. We now take both for granted. Even just a decade ago the idea that individuals' voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel. Yet a new business sector is emerging to do exactly that. The first in-depth examination of the voice intelligence industry, The Voice Catchers exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis. Amazon and Google have numerous patents pertaining to voice profiling, and even now their smart speakers are extracting and using voice prints for identification and more. Customer service centers are already approaching every caller based on what they conclude a caller's voice reveals about that person's emotions, sentiments, and personality, often in real time. In fact, many scientists believe that a person's weight, height, age, and race, not to mention any illnesses they may have, can also be identified from the sound of that individual's voice. Ultimately not only marketers, but also politicians and governments, may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole. Leading communications scholar Joseph Turow places the voice intelligence industry in historical perspective, explores its contemporary developments, and offers a clarion call for regulating this rising surveillance regime. Echo Dot 2nd Generation User Guide and Product Review

Building Smart Home With Alexa; How to Find Simplicity, Gain Efficiency, & Live the Life Youve Always Wanted

An in-depth examination of the novel ways young people support and learn from each other through participation in online fanfiction communities. Over the past twenty years, amateur fanfiction writers have published an astonishing amount of fiction in online repositories. More than 1.5 million enthusiastic fanfiction writers—primarily young people in their teens and twenties—have contributed nearly seven million stories and more than 176 million reviews to a single online site, Fanfiction.net. In this book, Cecilia Aragon and Katie Davis provide an in-depth examination of fanfiction writers and fanfiction repositories, finding that these sites are not shallow agglomerations and regurgitations of pop culture but rather online spaces for sophisticated and informal learning. Through their participation in online fanfiction communities, young people find ways to support and learn from one another. Aragon and Davis term this novel system of interactive advice and instruction distributed mentoring, and describe its seven attributes, each of which is supported by an aspect of networked technologies: aggregation, accretion, acceleration, abundance, availability, asynchronicity, and affect. Employing an innovative combination of qualitative and quantitative analyses, they provide an in-depth ethnography, reporting on a nine-month study of three fanfiction sites, and offer a quantitative analysis of lexical diversity in the 61.5 billion words on the Fanfiction.net site. Going beyond fandom, Aragon and Davis consider how distributed mentoring could improve not only other online learning platforms but also formal writing instruction in schools.
