Learn math in a guided discovery format. These "teaching textbooks" are designed to let students learn at their own pace. Summit Math books are for curious students who want learning to feel like a journey. The scenarios are arranged to show how new math concepts are related to previous concepts they have already learned.

Students naturally learn at different paces and these books help teachers manage

flexible pacing in their classes. Learn more at www.summitmathbooks.com. Topics in this book: Using equations to find an intersection point The substitution method The elimination method When two lines do not intersect at a single point Scenarios that involve systems of equations Systems of linear inequalities More scenarios that involve systems of equations Cumulative Review Answer Key Book description: In this book, students find the intersection point of two lines by looking at their graphs. They then learn that they can find the intersection point by using algebraic methods called substitution and elimination. They use these methods to solve a variety of scenarios that can be modeled by two variables and two equations. They also learn how to graph systems of linear inequalities. Near the end of the book, they analyze a variety of scenarios that involve linear systems, while also getting a preview of nonlinear systems, which is a topic they will learn more about in Algebra 2: Book 6. This book builds on Algebra 1: Book 2. Student testimonials: "This is the best way to learn math." "Summit Math books are unlike typical textbooks. It doesn't matter how you learn or what speed you go at...you can learn at your own pace while still understanding all the material." "Summit Math Books have guided me through algebra. They are the stepping stones of what it takes to think like a mathematician..." "I really enjoy learning from these books...they clearly demonstrate how concepts are built over other concepts." In this book, students learn about polynomial expressions and then they use what they have learned about operations with numbers to discover how to add and subtract polynomials. Students use what they have already learned about the distributive property to discover how to multiply binomial and trinomial expressions. They also investigate special cases that occur when multiplying binomials. They explore cases where the product of two binomials is a binomial and they look for patterns that occur when a binomial is multiplied by itself. This book

Dr. James L. Tyson sailed from Baltimore for California in January 1849, crossing the Isthmus and sailing on to San Francisco. Diary of a physician in California (1850) recounts his 1849 tour of the Northern Mines in search of a likely place for his medical practice and his hospital at Cold Spring, where his patients included a number of Oregonians. Tyson closes his hospital at the end of the summer, sailing from San Francisco as a ship's physician, crossing the Isthmus and landing in the United States in December 1849. Introduction to percents Percent changes: increases and decreases Writing equations to calculate percents Various percent scenarios

Cumulative review: part 1 Introduction to rates Using graphs to calculate rates Rates in equations Cumulative review: part 2 Answer Key Book description: This book guides students through a wide variety of percent scenarios. They review percentages as a way to express fractions and then they learn how to calculate percent increases and decreases. Students also learn how to write and solve percent equations that model percent relationships. Percent scenarios come in many forms, so this book seeks to familiarize students with a wide variety of percent scenario. Students learn about rates at the end of the book. They learn how rates can be interpreted from graphs and how rates can be expressed in equations. These rates scenarios are designed to prepare them for learning about linear equations in Algebra 1: Book 2. Student testimonials: "This is the best way to learn math."
