Illustrated Guide to Home Chemistry Experiments

While Active Learning Classrooms, or ALCs, offer rich new environments for learning, they present many new challenges to faculty because, among other things, they eliminate the room’s central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed. The importance of learning how to use these classrooms well and to capitalize on their special features is paramount. The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls. This book provides an introduction to ALCs, briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based, practical guidance on how to use these unfamiliar spaces effectively. Among the questions this book addresses are: • How can instructors mitigate the apparent lack of a central focal point in the space? • What types of learning activities work well in the ALCs and take advantage of the affordances of the room? • How can teachers address familiar classroom-management challenges in these unfamiliar spaces? • If assessment and rapid feedback are critical in active learning, how do they work in a room filled with circular tables and no central focus point? • How do instructors balance group learning with the needs of the larger class? • How can students be held accountable when many will necessarily have their backs facing the instructor? • How can instructors evaluate the effectiveness of their teaching in these spaces? This book is intended for faculty preparing to teach in or already working in this new classroom environment; for administrators planning to create ALCs or experimenting with provisionally designed rooms; and for faculty developers helping teachers transition to using these new spaces.

Oral Communication: A Lecture Guide provides students with a comprehensive yet accessible guide to effective communication and public speaking. The texts help readers understand their role, as well as the role of their audience, during the communication process. With this new knowledge, students learn how to present concepts and share ideas with confidence and efficacy. The book begins by introducing students to the concept of communication, highlighting that communication is a complicated, shared process that is composed of many variables and elements. Proceeding chapters teach readers how to prepare for a public address, organize a presentation to achieve maximum audience understanding and impact, and strategically practice the delivery of a speech. Additional topics include the disadvantages of memorizing a speech word-for-word, the impact of nonverbal communication on an address, and the advantages and disadvantages of different types of speeches or presentations. The text closes with a chapter dedicated to presentational aids and how their correct use can maintain audience engagement and increase understanding. Oral Communication is ideal for undergraduate courses in public relations, broadcast and radio journalism, and communication studies. Gail-Ann G. Greaves-Venzen is an associate professor of communication studies in the Department of Journalism and Communication Studies at Long Island University. She is the director of forensics and the former chair of the Communication Studies Department. Study Guide and Lecture NotebookCORNELL Notes, T.H.I.E.V.E.S. study method, College & High School Lecture Notes, Study Skills, Workbooks, Test Preparation, Instruction Methods, Subject Notebooks This academic STUDY GUIDE AND LECTURE NOTEBOOK provides an academically-based organizational layout for the high school or university student to write vital information about the course topic, keep track of point of contact information for the instructor and class peers, as well as to study using a blend of proven study methodologies, including the following systems: The Cornell Notes method provides a system to condense / organize lecture notes by dividing the note-taking into two columns (pages): the note-taking column (usually on the right) with notes for summarizing lecture notes pages on the left-hand side (page). The summarization page allows the student to quickly summarize key points from the lecture notes on the right page to bullet points on the left page. The Textbook review section uses the T.H.I.E.V.E.S. study strategy, where the student / learner reviews and summarizes the information in the course textbook, with notes broken out into: T - title H - headings I - introduction E - every paragraph (first sentence) V - visuals / vocabulary - summarizing what the graphics are representing E - end of chapter questions S - summarize the entire chapter's content How to Use the Study NotebookThe student will take notes on the right hand pages marked Lecture notes in class. It is best to not try to write word-for-word, but to note the high-points of the important topics of the lecture. When finished, during a study session, the student will go back to the notes and using the left-hand page, summarize important points by listing points that may have been missed in class, but are present in the textbook or the instructor's worksheets from class. Before or after the class lecture, the student will use the T.H.I.E.V.E.S. system to summarize the information in the textbook, writing out vocabulary words and definitions, and answering the questions in the back of the chapter, rewriting the questions incorporated into the answer. If the student has any questions from the textbook or lecture notes they need to ask the instructor to expand upon in the next lecture, they can write those in the specific page for that purpose. If the instructor provides specific sources, references, or citations in class, the student can note those on the same page. The pages are placed 'oddly' in the layout of the book. This enables the student to open the notebook and have in-class lecture notes face the summary page to avoid having to flip the pages back and forth for information. Textbook study pages are marked with a dark triangle in the top right hand side of the page to help students quickly find textbook-specific note pages in the notebook. Key Words to search for this and similar study notebooks: Academic, Academic aid, Academic notebook, Blank notebook, Class Notebook, Class Organizer, Cornell Notes organizer, Course Organizer, Education, Education & Teaching, Educational Study Aids, Lecture Notes, Lecture Organize, Notebook, School notebook, Study Aid, Study Aids, Study Guide, Study methods, Study notebook, Language Arts, Study Organizer, Textbook study, Textbook study methods, CORNELL Notes, THIEVES study method, T.H.I.E.V.E.S. study method, College & High School, Study Skills, Workbooks, Test Preparation, Instruction Methods, Subject Notebooks
