This is the second edition of the book. The book has been written especially for UGC NET Exam, which is conducted twice a year i.e. in June & December. Not a single book is available on Women's Studies especially for UGC NET Exam. It is my endeavour to fill this gap. The first section of this book deals with important facts related to the subject. It contains all the information in tabular form for quick revision. Thereafter, 31 Sets of Question Papers (Paper II & Paper III) asked in previous UGC NET Exam from 2004 to 2015 has been solved with detailed explanations. If any NET aspirant studies these Question-Answers carefully then I am sure that success is not far for such aspirants, as often many questions from previous year exam are repeated or asked in a modified form each year. Those students who are appearing in State Level Eligibility Test or Ph. D Entrance Exam may also find this book equally useful for them.

The study focuses upon the process of land alienation going on since the colonial period, the skewed patterns of socio-economic development in the tribal area after independence and the resulting political movements in Andhra Pradesh, South India. The existing literature shows that majority of the studies on tribes in Andhra Pradesh, South India have focused upon the sociological or anthropological aspects of tribal life, their exploitation or upon the leadership, strategy and tactics of the Naxalite movements, while ignoring the basic underlying causes. The processes of land alienation, due to the entry of non-tribals, commoditization of land, introduction of cash crops etc., which began under the feudal and oppressive Nizam State in Andhra Pradesh, South India. Further, our book tries to look at the policies of the colonial state that has been examined in detail and provide a background to the post colonial situation. It also shows that after independence, the land transfer regulation act, and the various developmental programmes introduced into the tribal area, has not yielded significant results. A detailed survey reveals that landlessness, unemployment, poverty and increasing social alienation from hostility towards non-tribals is increasing in these regions. It is these factors that underlie them often violent political movement in the pre and post independence movement which have been described in detail in our book. The study concludes that unless tribal lands and economy are protected, and a pattern of development better suited to their way of life is introduced, tribal oppression and movements keep on arises further in any backward regions. Our book hopes to fill this gap by establishing inter-linkages in socio-economic conditions of the tribal population of Andhra Pradesh, South India. Our book is interdisciplinary in nature and shall be useful to scholars and students of Political Economy, Political Science, Rural Development, Public Administration, Anthropology, Sociology, Gender Studies and Development. It is widely applicable to all sections of the marginalized socially, economically, culturally, academically, politically and other wise.

This Textbook of B.Sc. Mathematics for the students studying second year in all universities of Andhra Pradesh was first published in the year 1988 and has undergone several editions and many reprints. The revised syllabus is being adopted by all the universities in Andhra Pradesh, following Common Core model curriculum from the academic year 2015 - 2016 based on CBCS (Choice Based Credit System). This book strictly covers the new curriculum for Semester III (2nd year, 1st semester).

Recently, artificial intelligence (AI), the internet of things (IoT), and cognitive technologies have successfully been applied to various research domains, including computer vision, natural language processing, voice recognition, and more. In addition, AI with IoT has made a significant breakthrough and a shift in technical direction to achieve high efficiency and adaptability in a variety of new applications. On the other hand, network design and optimization for AI applications addresses a complementary topic, namely the support of AI-based systems through novel networking techniques, including new architectures, as well as performance models for IoT systems. IoT has paved the way to a plethora of new application domains, at the same time posing several challenges as a multitude of devices, protocols, communication channels, architectures, and middleware exist. Big data generated by these devices calls for advanced learning and data mining techniques to effectively understand, learn, and reason with this volume of information, such as cognitive technologies. Cognitive technologies play a major role in developing successful cognitive systems which mimic "cognitive" functions associated with human intelligence, such as "learning" and "problem solving." Thus, there is a continuing demand for recent research in these two linked fields. The Handbook of Research on Innovations and Applications of AI, IoT, and Cognitive Technologies discusses the latest innovations and applications of AI, IoT, and cognitive-based smart systems. The chapters cover the intersection of these three fields in emerging and developed economies in terms of their respective development situation, public policies, technologies and intellectual capital, innovation systems, competition and strategies, marketing and growth capability, and governance and relegation models. These applications span areas such as healthcare, security and privacy, industrial systems, multidisciplinary sciences, and more. This book is ideal for technologists, IT specialists, policymakers, government officials, academics, students, and practitioners interested in the experiences of innovations and applications of AI, IoT, and cognitive technologies.

This curated collection examines Stephen Philip Cohen's impressive body of work. Stephen Philip Cohen, the Brookings scholar who virtually created the field of South Asian security studies, has curated a unique collection of the most important articles, chapters, and speeches from his fifty-year career. Cohen, often described as the "dean" of U.S. South Asian studies, is a dominant figure in the fields of military history, military sociology, and South Asia's strategic emergence. Cohen introduces this work with a critical look at his past writing—where he was right, where he was wrong.

This exceptional collection includes materials that have never appeared in book form, including Cohen's original essays on the region's military history, the transition from British rule to independence, the role of the armed forces in India and Pakistan, the pathologies of India-Pakistan relations, South Asia's growing nuclear arsenal, and America's fitful (and forgetful) regional policy.
