

Annual Report On Port State Control In The Asia Pacific

This series contains the decisions of the Court in both the English and French texts.

This book discusses in a concise manner the key aspects that are important for the understanding of regulations and managerial framework governing marine pollution. It identifies the practical context in which marine pollution comes into play and addresses the international legal regime governing the numerous sources of marine pollution, as well as the ways in which these regulations affect the conduct of day-to-day shipping operations. With illustrations, case studies, emphasis boxes, references to case law and to national jurisdictions and other tools facilitating understanding and knowledge, readers will find helpful guidance on: the sources of marine pollution (including ship-source pollution and pollution from the offshore oil and gas sector); the forms of cooperation needed in order to tackle the prevention, management and response to marine pollution; overview of MARPOL Convention, other key IMO conventions, and selected regional regimes; legal ramifications, including P & I Clubs and limitation of liability; involvement of the flag State, coastal State and port State; industry best practice; the human element Marine Pollution Control will be a useful guidance tool for shipping Industry professionals, (P & I) Clubs, Legal practitioners, maritime administrators, as well as academics and students of marine pollution.

This book focuses on assessing China's international environment in the Indian Ocean including political, economic and secure environments through examining the characteristics of the international environment in the Indian Ocean. It figures out that there are four new changes and characteristics from the perspective of the current international environment in the Indian Ocean. Firstly, the turmoil in the security situation in the Indian Ocean has not been eased, but also showed signs of deterioration. Secondly, the strategic competition of the major powers in the Indian Ocean region has been exacerbated. Thirdly, the USA will remain the largest contributing variable in the international environment of the Indian Ocean in the future. Fourthly, India, a biggest country in the region, is becoming a major variable affecting the international environmental change in the Indian Ocean. This book also presents a picture of how the changes of great powers' geo-strategic competition in the Indian Ocean affect the development of China's BRI and believes that the Indian Ocean order will be gradually transforming from the American hegemony to the emergence of jointly governance including USA, China and India.

Summary of Operations; Annual Report of the State Oil and Gas Supervisor

Saving the Oceans Through Law

Annual Report 1989 The Memorandum of Understanding on Port State Control

Annual Report 1985/1986 The Memorandum of Understanding on Port State Control

Annual Report of the State Corporation Commission of Virginia

The general international law regarding foreign merchant ships in internal waters has never been codified. The question of the breadth of the territorial sea was finally solved during the Third United Nations Conference on the Law of the Sea. But conflicts between coastal States and foreign merchant ships in internal waters and the territorial sea may arise. This comprehensive study analyses these issues and strives for reasonable and generally acceptable solutions.

This publication provides guidance to port State control officers (PSCOs) on the conduct of inspections of foreign ships, in order to promote consistency in the way inspections are carried out worldwide, and to harmonize the criteria for deciding on deficiencies found on board relating to the ship, its equipment or its crew, as well as the application of procedures.

Because the liability of ship owners is limited, classification societies have been considered as exempt from liability. This book analyses which actions of classification societies may give rise to claims and whether or not the societies can be held liable under English, German or American maritime law. In addition, it develops the fundamental aspects of an international convention on the limitation of the liability of classification societies.

Asia-Pacific State Practice

The Belt and Road Initiative and the Law of the Sea offers insightful discussions on the use of oceans in the context of the Belt and Road Initiative, navigational safety, marine energy and sea ports, maritime law enforcement and access of landlocked states to the sea.

This edited book, Regulation on Navigation of Foreign Vessels: Asia-Pacific State Practice, is a collection of country papers focused on contentious and diverse subject areas of the international law of the sea – foreign vessel rights of navigation in national waters.

Maritime Security, 2e, provides practical, experience-based, and proven knowledge - and a "how-to-guide" - on maritime security. McNicoll explains in clear language how commercial seaports and vessels function; what threats currently exist; what security policies, procedures, systems, and technologies can be implemented to mitigate these threats; and how to conduct ship and port security assessments and plans. Whether the problem is piracy, terrorism, destruction or cargo theft, Maritime Security provides invaluable guidance for the professionals who protect our shipping and ports. New chapters cover whole government maritime security, UN legal conventions and frameworks, transnational crime, and migration. Updates throughout will provide the latest information in increasingly important field. Provides an excellent introduction to issues facing this critical transportation channel. Includes 10 chapters, and updated throughout to reflect changes in maritime security Increased coverage of migration issues and transnational crime and terrorism bring legal security and cybersecurity issues to the fore

Model Rules of Professional Conduct

All of these flag States have the right to sail ships flying their flag on the high seas (LOSC Article 90) ; and those ships enjoy the freedom of navigation upon the high seas (LOSC Article 87) . With this freedom comes a concomitant duty upon the flag State to effectively exercise its jurisdiction and control in administrative , technical , social (LOSC Article 94 (1)) and environmental protection (LOSC Article 217) matters over ships flying its flag. 1.2 Flag State Responsibility The absence of any authority over ships sailing the high seas would lead to chaos. One of the essential adjuncts to the principle of freedom of the seas is that a ship must fly the flag of a single State and that it is subject to the jurisdiction of that State. (Brown 1994 , p. 287) This opinion of the International Law Commission in 1956 on a draft article of the High Seas Convention (HSC) was a product of its time; a time of traditional maritime States and responsible long-established shipping companies operating for the most part under the effective maritime administrations of their national flag .

The oceans cover more than seventy per cent of the surface of the planet and they provide many vital ecosystem services. However, the health of the world's oceans has been deteriorating over the past decades and the protection of the marine environment has emerged as one of the most pressing legal and political challenges for the international community. An effective solution depends upon the cooperation of all states towards achieving agreed objectives. This book provides a critical assessment of the role that international law plays in this process, by explaining and evaluating the various legal instruments that have been negotiated in this area, as well as key trends in global ocean governance. Starting with a detailed analysis of the United Nations Convention on the Law of the Sea, the book considers the main treaties and other legal texts that seek to prevent, reduce, and control damage to the marine environment caused by navigation, seabed exploitation, fishing, dumping, and land-based activities, as well as emerging pressures such as ocean noise and climate change. The book demonstrates how international institutions have expanded their mandates to address a broader range of marine environmental issues, beyond basic problems of pollution control to include the conservation of marine biological diversity and an ecosystems approach to regulation. It also discusses the development of diverse regulatory tools to address anthropogenic impacts on the marine environment and the extent to which states have adopted a precautionary approach in different maritime sectors. Whilst many advances have been made in these matters, this book highlights the need for greater coordination between international institutions, as well as the desirability of developing stronger enforcement mechanisms for international environmental rules. Port State Control, Second Edition is a comprehensive publication dealing with the full implications and regulations of port State control. It provides a detailed analysis of the legal framework relating to port State control, including the most recent developments in this area. It covers not only the regional agreements on port State control and the EU legislation on this subject but also the background of the port State control process, its implications in practice and its effect on the ISM Code and the classification societies. The book covers topics such as: Amendments and changes to the regional port state control

Essays in Honor of Elisabeth Mann Borgese (1918-2002)

Documents of the Assembly of the State of New York

It is a privilege to introduce the reader to this book, as I believe that it will make a significant contribution to, given the difficulties in the knowledge of the Indian Ocean, developing cooperation in the Indian Ocean region. There have been numerous failed efforts at regional cooperation in different fora in the Indian Ocean. As a result of the land-based orientation of the people in the region, the importance for countries to develop the power to govern the sea has largely been ignored. The maritime approach taken by Manoj Gupta to the Indian Ocean as a region in international relations offers a timely and critical assessment of the potential for regional cooperation and ocean governance. The political leadership in the region can no longer ignore the need for cooperation in maritime affairs in the Indian Ocean. This book enriches the literature on Indian Ocean issues as it argues convincingly that the security of nations, economic well-being of the people and health of the Indian Ocean cannot be divested from one another. All are fundamentally dependant on the ability of the countries in the region to individually and collectively exert the power to govern the sea.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

The Regulatory Framework for the Reduction of Greenhouse Gas Emissions

The International Ocean Institute - Canada has compiled more than 80 insightful essays on the future of ocean governance and capacity development, based largely on themes of its Training Program at Dalhousie University in Canada, to honor the work of Elisabeth Mann Borgese (1918-2002).

The last quarter century has witnessed vast changes in the governance of ocean space and resources. The authors of Law of the Sea, acknowledged authorities in the field, offer fresh and searching reappraisals of how the 'common heritage' concepts in ocean law have been challenged by the contemporary crises in marine uses and ocean environment and resources.

This textbook on the law of the sea sets the subject in the context of public international law. It comprehensively covers the principal topics of the course, from the legal regimes governing the different jurisdictional zones, to international co-operation for protection of the marine environment and marine living resources.

The book gathers selected papers presented at the KES International Symposium on Smart Transportation Systems (KES-STs 2019). Modern transportation systems have undergone a rapid transformation in recent years. This has produced a range of vehicle technology innovations such as connected vehicles, self-driving cars, electric vehicles, Hyperloop, and even flying cars, and with them, fundamental changes in transport systems around the world. The book discusses current challenges, innovations and breakthroughs in Smart Transportation Systems, as well as transport infrastructure modeling, safety analysis, freeway operations, intersection analysis, and other related cutting-edge topics.

For nearly forty years, The law of the sea has been regarded as an authoritative and standard work on the subject, combining detailed analysis and relevant, practical examples with a clear and engaging style. Completely revised and updated, this new edition will be a vital resource for anyone with an interest in maritime affairs. The book provides a rigorous analysis of the 1982 UN Convention on the Law of the Sea and the many other legal instruments that regulate human activities at sea, as well as taking full account of the numerous decisions of international courts and tribunals in recent years. It also traces the historical background to the law and its broader political,

economic and environmental context. The new edition includes substantially expanded coverage of contemporary threats faced by the marine environment from human activities, such as the loss of marine biodiversity, the effects of climate change on the oceans and the vast amounts of plastic polluting the sea. This volume is written by three highly qualified authors, drawing on their extensive experience of teaching and researching the law of the sea, as well as their practical experience in advising governments and acting as counsel and arbitrators in international litigation.
