Each Study Guide chapter concludes with a Test Yourself section that allows the student to test their comprehension. All questions include answers and explanations.*

*This book effectively translates author Hank Green's YouTube video sensation of biology Crash Courses into guided question worksheets. Students follow along with Hank Green's online Crash Courses and reflect upon topics in biology using this interactive guiding question workbook. A quick type in on a Google search engine or YouTube of "Crash Course Biology" will take one to the desired site of where 40 episodes can be found. Common Core biology standards are followed in all questions inside of the Crash Course Biology: A Study Guide of Worksheets for Biology workbook helping students tap into level 3 and 4 DOK (Depth of Knowledge) thinking skills in biology while actively learning while listening to Hank Green's Biology Crash Course videos. This workbook can be used to focus students either with or without headphones on a laptop while watching the desired YouTube video thus eliminating distraction in a desired setting. Questions posed are in accordance with AP high school biology standards (aka college level biology standards) and can be used in order to improve test scores, content understanding, and effectively build upon essay structure in writing about topics in biology. Target audience includes but is not limited to native English speakers and English language learners ages 15-22. Note: Those without access to YouTube can still use these guiding questions as a guide in order find answers using their respective biology book, and by looking up answers using bolded key terms and vocabulary. Questions posed in this book are meant to inspire paragraph development including intro, thesis, body, and conclusion paragraph*

structure while affording the reader opportunities to analyze, evaluate, and reflect upon a wide number of topics found in biology.

The Conversational Science series is a new (or, at least, different) approach to preparing for the latest version of the Medical College Admissions Test\*. This bit is only my personal opinion, but I think the easiest way to do well on the MCAT is to understand the material. There's one heck of a lot of material, though, so how should you study the things you've already covered in class? This study guide is written in an informal tone of voice because you and I are having a conversation, and not a lecture. This study guide contains a limited number of crudely drawn figures. You're the person studying for the exam\*\*, so I ask you to draw the rest of the figures for yourself. A figure that you draw yourself, even if you have no artistic talent whatsoever, teaches you much more than you can learn by simply looking at the beautiful, full-color, professionally drawn figures in your textbooks. This study guide has a limited number of review questions so you can check if you really did understand one chapter before you move on to the next. This study guide DOES NOT contain any practice exams. This is because (in my opinion, again, based on my experience as a student and as an

instructor) the questions in the practice exams of many study guides are too often confusing, poorly written, and not at all like the actual questions on the actual exam. And, sometimes, the answers given for some questions on some practice exams are just plain wrong. This study guide may not be for everyone, but I think there's a good chance it'll help you convince yourself that you really do understand the material.
